1. Introduction

1. The National Planning Policy Framework sets out the government's policies for plan-making and for making decisions on development proposals in England¹. It is a material consideration of critical importance in both contexts.
2. The planning system should be genuinely plan-led. Preparing and maintaining up-to-date development plans should be seen as a priority for providing housing and other development in a sustainable manner. The plan-making policies in the Framework must be taken into account in preparing any part of the development plan.
3. Planning law requires that applications for planning permission be determined in accordance with the development plan, unless material considerations indicate otherwise². The national decision-making policies in this Framework are a material consideration in making these decisions and should be read alongside the policies in the development plan.
4. This chapter explains the role of the Framework, practical points on its structure and use, and an overview of the purpose of the planning system. The chapter does not contain substantive policy; the policies to be used for plan-making and decision-making are set out in the chapters which follow.

Using the Framework

5. Chapters 2 and 3 set out general procedural policies for plan-making and decision-making. The subsequent chapters contain policies on thematic issues, separated in each case into policies for plan-making and those for decision-making. Taken together, the policies for decision-making (both procedural and thematic) comprise a set of national decision-making policies.
6. The plan-making policies should be read as a whole (including relevant footnotes and annexes), and applied in a way which is appropriate to the type of plan being produced, the area which it covers and the period it is intended to cover. Reflecting this, some of the plan-making policies indicate actions which should be taken at the most appropriate level, which recognises that plan-making arrangements will vary across the country (for example in the geographic scale of spatial development strategies and local plans).
7. The national decision-making policies should also be read as a whole (including relevant footnotes and annexes). Some of these policies indicate how much weight the government would expect a particular consideration to be given, including cases where it is appropriate to give substantial weight to certain benefits, and the limited circumstances in which it is expected that permission would be refused.
8. The thematic chapters contain both plan-making policies and national decision-making policies so that the approach to particular topics can be seen in the round. However, the

¹ This document replaces the previous version of the National Planning Policy Framework published in December 2024.

² Section 38(6) of the Planning and Compulsory Purchase Act 2004 and section 70(2) of the Town and Country Planning Act 1990.

plan-making policies should not be used when making decisions on development proposals.

9. The annexes included with this Framework are also national planning policy.
10. Short objectives are included in boxed text at the start of chapters for context only and should not be applied as either plan-making or decision-making policy.

Other policy and guidance

11. There are other national policy statements which must be considered, where relevant, when preparing plans or making decisions on development proposals. These include the government's National Planning Policy for Waste and relevant Written Ministerial Statements. Details of Written Ministerial Statements and other planning policy documents whose policy has been fully or partially superseded by this Framework are included at Annex A.
12. The Framework does not contain specific policies for nationally significant infrastructure projects. These are determined in accordance with the Planning Act 2008 (as amended) and relevant national policy statements for major infrastructure, as well as any other matters that are relevant (which may include this Framework). National policy statements may, where relevant, be a material consideration in preparing plans and making decisions on planning applications.
13. National planning policy is supported by a suite of planning practice guidance, the purpose of which is to support the implementation of national planning policy. The government intends this to play an important but supporting role to national planning policy and its status should be regarded in that light.

Purpose of the planning system

14. The purpose of the planning system is to contribute to the achievement of sustainable development, by managing the use and development of land in the long-term public interest.
15. At a very high level, the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs³. At a similarly high level, members of the United Nations – including the United Kingdom – have agreed to pursue the 17 Global Goals for Sustainable Development in the period to 2030. These address social progress, economic well-being and environmental protection⁴.
16. Achieving sustainable development means that the planning system has three overarching objectives in providing for the homes, commercial development, facilities and infrastructure which society needs. These objectives are interdependent and need to be pursued in mutually supportive ways (so that opportunities can be taken to secure net gains across all three):

³ Resolution 42/187 of the United Nations General Assembly.

⁴ Transforming our World: the 2030 Agenda for Sustainable Development.

- a. **An economic objective** – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure.
 - b. **A social objective** – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible community facilities, public service infrastructure and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and
 - c. **An environmental objective** – to support efforts to mitigate and adapt to climate change, including moving to a low carbon economy; and to protect and enhance our natural, built and historic environment, including making effective use of land, improving biodiversity, using natural resources prudently, and minimising waste and pollution.
17. These objectives should be delivered through the preparation and implementation of development plans and the application of the policies in this Framework; they are not criteria against which every development proposal can or should be judged. Development plans and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.

2. Plan-making policies

The objective of the policies in this chapter is to create a system which is genuinely plan-led, through plan-making authorities⁵ prioritising the preparation and updating of the plans for which they are responsible. The preparation of development plans allows people to influence development in their area, including directing growth to the most appropriate and sustainable locations, supporting regeneration and conserving and enhancing the quality of the built and natural environment.

The required parts of the development plan are:

- a. A spatial development strategy, produced by strategic planning authorities and the Mayor of London;
- b. A local plan produced by a local planning authority;
- c. A minerals and waste plan produced by a minerals and waste planning authority; and
- d. A policies map, prepared and maintained by a local planning authority, illustrating policies across all parts of the development plan.

It may additionally include:

- e. Supplementary plans, produced by local planning authorities, minerals and waste planning authorities and the Mayor of London; and
- f. Neighbourhood plans, produced by parish councils and neighbourhood forums.

The different parts of the development plan each have a discrete purpose and are expected to deal positively with particular issues, as set out in the relevant legislation and national policies, including the policies in this Framework.

The plan-making framework

PM1: Spatial development strategies

1. Spatial development strategies should set a positive vision for future growth and change at a sub-regional scale and provide a clear spatial framework for investment and growth, including for new housing. Their content should be genuinely strategic in nature and allow for more detailed issues to be considered and addressed through other parts of the development plan.
2. They should do this by:
 - a. Setting out a strategy for a sustainable pattern of growth covering a period of at least

⁵ For the purposes of the policies in this chapter, plan-making authorities are defined as: Strategic Planning Authorities; The Mayor of London; Minerals and Waste Planning Authorities; and Local Planning Authorities. 'Plan-makers' includes all plan-making authorities and any other body with the power to make a plan which will form part of the statutory development plan.

20 years, including through the apportionment to local planning authorities in the strategy area of objectively assessed needs for housing and other uses that are best considered at a strategic scale for the duration of the plan period;

- b. Identifying broad locations for strategic development including new settlements, major urban extensions, major cross-boundary development and key locations with the potential for new homes and jobs; such broad locations should extend over any large site allocations in adopted⁶ local plans;
 - c. Supporting economic growth by providing a spatial framework for strategic investments and giving spatial expression to strategic elements of Local Growth Plans and the National Industrial Strategy;
 - d. Identifying the general extent of areas established as Green Belt and broad locations where changes to Green Belt boundaries may need to be considered through local plan preparation, if necessary to meet the development needs of the strategy area;
 - e. Identifying broad locations for nature conservation and habitat enhancement, restoration and creation;
 - f. Setting out the type, extent and broad location of strategic infrastructure needed to enable development and serve existing communities, including transport, social and waste infrastructure, utilities provision, flood risk management schemes and, where considered appropriate, the provision of minerals. The spatial development strategy should also make provision for infrastructure that is committed to in the 10 Year Infrastructure Strategy, sectoral spatial plans and any planned strategic infrastructure identified in local transport plans;
 - g. Using appropriate maps and diagrams to illustrate and communicate the strategy;
 - h. Providing a proportionate level of information on the mechanisms for delivering the strategy; and
 - i. Monitoring its implementation and adopting a replacement no later than 10 years after the current version was adopted, or earlier:
 - i. if a strategic planning authority (or, where applicable, the Mayor of London) considers there are substantial inconsistencies with current national policies; or
 - ii. where changes to infrastructure are planned that are likely to have a significant impact on development and land use in the strategy area and which were not considered during the preparation of the existing spatial development strategy; or
 - iii. to respond to significant change or new evidence of needs, opportunities or development constraints.
3. Alterations to spatial development strategies should be made at least every 5 years to reflect any changes to housing requirements for the local planning authorities in the strategy area. It may be possible to make limited alterations if they do not fundamentally change the overall spatial strategy.

⁶ Reference to the 'adoption' of a plan in this chapter also applies to where a plan has been 'approved' by the Secretary of State.

PM2: Local plans

1. Local plans should set out a positive vision and spatial strategy, which supports the delivery of the spatial development strategy for their area, and should set out specific proposals for accommodating development needs and improving the environment at a local level. They should do this by:
 - a. Setting out a vision for the plan area, supported by no more than ten measurable outcomes, which:
 - i. articulates how the area should change over the plan period;
 - ii. sets aspirational aims and objectives underpinned by a realistic appreciation of what the plan's policies can genuinely shape and deliver;
 - iii. reflects longer term expectations extending beyond the plan period where appropriate, including for large scale development proposals; and
 - iv. has particular regard to meeting the identified development needs of the area in a sustainable manner in accordance with policy S1.
 - b. Setting out a spatial strategy, policies for the minimum amount of development to be provided, land allocations⁷ and broad locations for growth, and designations in accordance with policy S2, for a period of no less than 15 years from the point of adoption of the plan;
 - c. Identifying the contributions expected from development towards meeting affordable housing requirements and on-and off-site infrastructure necessary to support delivery of the plan in accordance with policy PM12; and,
 - d. Setting out other policies, accompanied by concise explanatory text as necessary to aid interpretation, only where these support the delivery of specific allocated sites (to set clear expectations of what is required in terms of layout, infrastructure and design); or where these address particular local issues in accordance with policy PM6.
2. Local plans should be prepared and adopted within 30 months of publishing a Gateway 1 self-assessment⁸.
3. Commencement of the preparation of the next local plan must be no later than 5 years after adoption of the current plan⁹, but should be prepared earlier where:
 - a. an Inspector at examination of the current plan has made a recommendation to prepare a new plan earlier; or
 - b. there has been a significant change in local circumstances, including where an area's

⁷ Allocations should identify any site-specific expectations and requirements, including for on-and off-site infrastructure, and should include: a site reference, name and area; a short description of existing and allocated use(s); an indicative or specific site capacity for the development proposed; and the projected delivery timeframe.

⁸ Further information on the role of gateways in the preparation of local plans is published in: [Create or update a local plan using the new system - GOV.UK](#).

⁹ Commencing preparation of the local plan means you must have passed through Gateway 1.

housing requirement has significantly increased following the adoption of a spatial development strategy.

4. The Secretary of State has powers to intervene in plans, including when a local planning authority fails to make adequate progress with plan-making.
5. Joint local plans prepared by two or more local planning authorities should be considered where this would enable local planning matters to be dealt with most effectively.

PM3: Minerals and waste plans

1. Minerals and waste plans should set out specific proposals to facilitate a sufficient supply of minerals to meet society's needs and enable the delivery of sustainable waste management and a circular economy. Their preparation should accord with policy PM2, other than in relation to identifying contributions to affordable housing.
2. Minerals and waste matters can be dealt with in separate plans or combined with local plans where an authority is responsible for all these matters. Minerals and waste planning authorities should consider the most appropriate form for their minerals and waste plan to take.
3. Joint minerals and waste plans prepared by two or more minerals and waste planning authorities should be considered where this would enable matters related to minerals and waste planning to be dealt with most effectively.

PM4: Supplementary plans

1. Supplementary plans may be used by relevant plan-making authorities¹⁰ to address specific issues, where these are not already covered in other parts of the development plan for the area or the policies in this Framework. They should be limited to:
 - a. Setting out locally-specific design standards to provide clear design expectations that support the delivery of development; or
 - b. Situations where a supplementary plan would allow the authority to respond positively and quickly to unanticipated changes in their area, between plan-making cycles, where it is important to put in place policies to shape and direct development for a site or group of sites which the authority considers to be nearby to each other.
2. Supplementary plans should not be used to subvert the role of local plans and minerals and waste plans, including the vision or spatial strategy set out within them. Their preparation should not be used to delay the implementation of sites allocated for development in those plans.
3. Where supplementary plans allocate sites for development, these allocations should be included in the next local plan (or minerals and waste plan) for the area, unless changes in circumstances mean that it is no longer relevant to do so¹¹.

¹⁰ Local planning authorities, Minerals and Waste Planning Authorities and the Mayor of London.

¹¹ To ensure the process of including relevant policies from supplementary plans to the next local plan is effective, local authorities should, when preparing supplementary plans, have regard to the requirements and expectations set out for the local plans and minerals and waste plans preparation process.

PM5: Neighbourhood plans

1. Neighbourhood plans allow local communities to plan positively for their areas by identifying and addressing community priorities that can be met or supported through the planning system. They should do this by:
 - a. Allocating land to meet the development needs of their designated area, where it is appropriate to do so; and
 - b. Setting out policies which address particular local issues, these should relate to site-specific matters or, where appropriate, may cover wider issues such as the provision of infrastructure and community facilities, regeneration opportunities, design requirements (including design codes), local environmental improvements and the conservation of local heritage assets.
2. Neighbourhood plans should not promote less development than provided for in other parts of the development plan for the area.

Preparing plans

PM6: General principles for plan-making

1. All plan-makers should, in preparing plans:
 - a. Only address matters, and include policies, that are necessary and relevant to the plan being prepared, and which avoid unnecessary duplication of other parts of the development plan;
 - b. Only include policies which extend beyond site or location-specific requirements where these are necessary and where plan makers consider there is a clear and justified reason for inclusion;
 - c. Not duplicate, substantively restate or modify the content of national decision-making policies unless directed by other policies in this Framework;
 - d. Engage positively with communities and other key stakeholders, at appropriate points during their preparation and using a range of methods, so that relevant issues are identified and addressed as early as possible during the plan-making process;
 - e. Use environmental assessment to inform the preparation of plans, where legally required¹²; and,
 - f. Publish plans in a searchable digital format (e.g. as a text-based webpage), which complies with defined data standards (where applicable), to ensure plans are easily navigable and accessible to different users.

PM7: Initiating plan-making for local plans and minerals and waste plans

1. Prior to initiating the preparation of a local plan or minerals and waste plan, planning

¹² Neighbourhood plans may require Strategic Environmental Assessment, but only where there are potentially significant environmental effects.

authorities should, with reference to national guidance¹³, design an approach to preparing and adopting the plan within 30 months. This should involve:

- a. Setting realistic timings for key milestones and reflecting these in the local plan or minerals and waste plan timetable, which thereafter must be updated at prescribed points;
 - b. Identifying how the plan and associated documents will be signed off expediently and efficiently at key points in its development by elected members;
 - c. Using a project initiation document to develop and collate key information about how the plan will be resourced, managed and consulted on throughout its preparation; and
 - d. Planning regular engagement with key stakeholders that are likely to be critical to the delivery of the plan.
2. When considering the scope of a local plan or minerals and waste plan, planning authorities should use their four year plan evaluation report (or other relevant monitoring information, where necessary) to identify and consider what pre-existing plan policies and content should be wholly replaced, amended or carried forward without change, though all elements will be subject to consultation and examination.

PM8: Evidence for plan-making

1. All plans should be informed by a baseline understanding of the needs, opportunities, constraints and wider context of the area to which they relate. The preparation of plans should then be shaped and underpinned by information and data that is: relevant to the matters being considered in the plan; proportionate, so that it is focused and not unnecessarily extensive; and drawn from suitable and reliable sources that are sufficiently up-to-date.
2. To achieve this, plan-makers should:
 - a. Draw upon existing evidence, and update this where appropriate, before preparing or commissioning wholly new evidence (which should be done only where necessary);
 - b. Consider using relevant evidence produced by other plan-makers, where doing so could avoid duplication and support alignment between plans;
 - c. Where appropriate, work jointly with neighbouring or other relevant plan-makers to prepare evidence, particularly relating to cross-boundary matters and where a joint approach could support improved cooperation;
 - d. Make use of any relevant standardised tools, methods and templates published by the Secretary of State, as appropriate to the type of plan being prepared¹⁴; and
 - e. Not prepare new or additional evidence after a plan has been submitted for examination, unless requested to do so by an appointed Inspector or examiner.
3. Evidence related to development needs should be considered up-to-date if it has been

¹³ Relevant tools and templates are published in [Create or update a local plan using the new system - GOV.UK](#).

¹⁴ Including those published in [Create or update a local plan using the new system - GOV.UK](#).

produced using appropriately up-to-date information and data. Where evidence on development needs has been established at an early stage of plan preparation, it should not require reviewing and updating unless there are strong reasons to do so.

PM9: Identifying land for development

1. Development plans should be informed by an assessment of the land available in their area to meet development needs.
2. For plans that allocate specific sites for development the assessment should be undertaken with reference to national guidance¹⁵ and include:
 - a. A thorough site identification process to identify a sufficient range and quantity of potential sites;
 - b. An assessment of the availability, suitability and achievability (including likely viability) of those sites;
 - c. An assessment of the amount of development those sites have the potential to accommodate and the potential timescales over which development could be delivered¹⁶; and
 - d. The identification of the most appropriate sites for development taking into account the emerging vision and spatial strategy of the plan and the information above.

PM10: Maintaining cooperation between plan-making authorities

1. Plan-making authorities should engage proactively and regularly with infrastructure providers, neighbouring and other relevant plan-making authorities (where there are strategic interdependencies across boundaries) and other relevant bodies to identify and address cross boundary matters that need to be addressed in their plans, including:
 - a. Where additional infrastructure is needed;
 - b. Where development needs that cannot be met wholly within a particular plan area could be met elsewhere; and
 - c. To determine optimal locations for growth, such as in connected places for housing or along major transport corridors for some types of employment (which may necessitate alignment between different strategic planning authorities¹⁷).
2. Plan-making authorities should ensure their plan policies align as fully as possible with those of other bodies where there are strategic interdependencies across boundaries, including neighbouring and other relevant nearby plan-making authorities. In doing so they should take into account the relevant infrastructure and investment plans of infrastructure providers and authorities.

¹⁵ Relevant tools and templates are published in [Create or update a local plan using the new system - GOV.UK](#).

¹⁶ Taking into account the policies in this Framework, associated infrastructure requirements and their potential to be addressed, and the impact of any relevant environmental plans or strategies (including Environmental Delivery Plans).

¹⁷ This also applies to the Mayor of London.

3. Where matters are already addressed by an adopted spatial development strategy, plan-making authorities within the strategy area do not need to revisit them when preparing their plans
4. Where there is uncertainty about the future direction of other parts of the development plan or the plans of infrastructure providers, such as due to misaligned timings, plan-making authorities should make pragmatic decisions on the basis of available information rather than waiting for a full set of evidence from other bodies.

PM11: Demonstrating cooperation between plan-making authorities

1. Plan-making authorities should prepare, maintain and publish one or more statements of common ground to demonstrate that relevant cross-boundary matters have been addressed where possible including by:
 - a. Taking a consistent approach to planning the delivery of major infrastructure where this involves one or more neighbouring authorities;
 - b. Distributing and providing for unmet needs across neighbouring and/or nearby areas; and
 - c. Planning effectively for cross-boundary growth locations, allocations or designations with significant implications across neighbouring areas.
2. Where it has not been possible to fully address cross-boundary matters, plan-making authorities should demonstrate that they have taken all reasonable steps to address them.

PM12: Developer contributions

1. Development plans should, at the most appropriate level, set out the contributions expected from development to support the delivery of the plan.
2. These policy requirements may apply to different areas covered by the plan. This includes:
 - a. Plan-wide policies;
 - b. Policies for strategic sites which are critical to the delivery of the plan; and
 - c. Policies for different types or location of site or types of development.
3. Policy requirements should:
 - a. Include the levels and types of affordable housing provision required (with reference to policy HO5), along with other infrastructure required;
 - b. Be set at a level that allows for the planned types of development and sites to be deliverable, maximising certainty and reducing the need for viability assessment at the decision-making stage;
 - c. Be clear so that they can be accurately accounted for in the price paid for land. To

provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range.

4. Plans should set out the circumstances in which review mechanisms will be used for development proposals where contributions are proposed to be reduced below the requirements set out in plan policies. Plans should clearly set out the processes and terms of engagement regarding how and when viability will be reassessed over the lifetime of the development to maximise policy compliance.

PM13: Setting standards

1. Quantitative standards set through development plan policies should be limited to infrastructure provision, affordable housing requirements¹⁸, parking and design and placemaking, and where this will provide clarity and a high degree of certainty about the requirements that relevant development proposals are expected to meet. Such standards should:
 - a. Be justified, drawing upon relevant evidence of local characteristics and needs, while utilising or adapting relevant national standards where it is appropriate to do so (such as in relation to green infrastructure). Evidence in support of standards should be proportionate, in accordance with policy PM8, especially where relevant national standards already exist;
 - b. Not cover matters which are already addressed by Building Regulations, other than in relation to:
 - i. accessibility standards, for which local standards in relation to requirement M4(2) (accessible and adaptable dwellings) and/or M4(3) (wheelchair user dwellings) of the Building Regulations should be set in line with policy HO5; or
 - ii. water efficiency, for which it may be appropriate to apply the tighter Building Regulations optional requirement where justified, or exceptionally a more stringent local standard in areas of serious water stress.
 - c. Not cover matters relating to the construction or internal layout of buildings unless they are to implement the nationally described space standard.

Examining Plans

PM14: Examining spatial development strategies

1. Spatial development strategies are subject to an independent examination¹⁹ by an examiner appointed by the Secretary of State. The purpose of the examination should be to assess whether relevant procedural requirements have been met and the strategy is 'sound' alongside any other matters the examiner considers to be appropriate. Where the inspector does not consider the spatial development strategy to be sound, the examiner will be able to suggest modifications for the strategic planning authority to consider or recommend that the strategy is withdrawn.

¹⁸ And tenure mix on sites of 150 homes or more (see policy HO5).

¹⁹ Unless otherwise directed by the Secretary of State.

2. A sound spatial development strategy should satisfy the following tests:
 - a. **Positive** – the strategy sets out a positive approach to delivering growth which, as a minimum, seeks to meet the area’s objectively assessed needs, and is based on effective joint working on cross-boundary strategic matters. A strategy which does not provide for objectively assessed needs should be considered an exception, and only where it is evidenced that stringent efforts have been taken to meet those needs through cooperation with other strategic planning authorities²⁰;
 - b. **Appropriate** – the strategy sets out an appropriate strategy to enable the delivery of sustainable development, taking into account reasonable alternatives, the 10 Year Infrastructure Plan, the National Industrial Strategy, any relevant Local Growth Plan and other relevant strategies;
 - c. **Effective** – the strategy sets out effective policies for development and there is a reasonable prospect that local plans will be capable of identifying site allocations to implement its spatial strategy. Where spatial development strategies anticipate a change in market conditions which the strategy itself is intended to foster, a proportionate approach should be taken in assessing assumptions for the longer term, given the uncertainty which is likely to surround them. Post-adoption monitoring should be undertaken in such circumstances; and
 - d. **Consistent with national policy** – the strategy accords with the policies for plan-making in this Framework and other statements of national planning policy, where relevant, and does not duplicate, substantively restate or modify the content of national policies for decision-making.
3. When examining a spatial development strategy there may be limited certainty about the delivery of infrastructure towards the end of the plan period. Where this is the case, it will be sufficient to assess whether reasonable assumptions have been made based on adequate engagement with the relevant infrastructure providers.

PM15: Examining local plans and minerals and waste plans

1. Local plans and minerals and waste plans are subject to an independent examination by an inspector (or panel of inspectors) appointed by the Secretary of State. The purpose of the examination is to assess whether the plan is ‘sound’. A sound plan should satisfy the following tests:
 - a. **Positive** – the plan sets out a positive approach to delivering growth to meet the development needs of the area in accordance with policy S1;
 - b. **Appropriate** – the plan sets out an appropriate strategy to enable the delivery of sustainable development, taking into account reasonable alternatives;
 - c. **Realistic** – the plan sets out realistic policies for development, is based on effective joint working on cross-boundary strategic matters, and there is a reasonable prospect that its site allocations are capable of being deliverable at the time envisioned;
 - d. **Consistent** – the plan accords with the policies for plan-making in this Framework and

²⁰ This also applies to the Mayor of London.

other statements of national planning policy where relevant, and does not duplicate, substantively restate or modify the content of national policies for decision-making; and

- e. **Conformity** – the plan is in general conformity with any adopted spatial development strategy for the area²¹.
2. The tests of soundness should be applied in a proportionate way, taking into account the type and purpose of policy being considered.

PM16: Examining supplementary plans

1. Supplementary plans are subject to a streamlined preparation, consultation and examination process. The purpose of the examination of supplementary plans is to determine whether:
 - a. The relevant legal requirements have been met including, where a supplementary plan allocates multiple sites, that the local authority has reached a reasonable conclusion that the sites involved are nearby to each other; and
 - b. The relevant plan-making authority has had regard to national policies and guidance issued by the Secretary of State, including the policy in this Framework that development plan policies should not duplicate, substantively restate or modify the content of national policies for decision-making.

PM17: Examining neighbourhood plans

1. Neighbourhood plans must meet certain 'basic conditions' and other legal requirements before they can come into force. These are tested through an independent examination before the neighbourhood plan may proceed to referendum.
2. The basic conditions include consideration of whether, having regard to national policies and advice contained in guidance issued by the Secretary of State, it is appropriate for the neighbourhood plan to be 'made'. In this context neighbourhood plans should accord with the policies for plan-making in this Framework, and should not duplicate, substantively restate or modify the content of national policies for decision-making.

²¹ Conformity with an emerging spatial development strategy should also be taken into consideration. The extent to which conformity with an emerging strategy should be considered will depend on the stage of preparation of the emerging strategy and whether or not there is an existing strategy relating to the area.

3. Decision-making policies

The objective of the policies in this chapter is to ensure that development proposals are informed by appropriate information and decided in a way which is proportionate, timely and effective. This chapter provides a set of general decision-making policies which should be read with the rest of the thematic policies in the other chapters.

Preparing planning proposals

DM1: Preparing development proposals

1. Proposals for major development should:
 - a. Be informed by early engagement with neighbours and the local community, as well as with the local planning authority, statutory consultees and other relevant bodies where appropriate, to identify and seek to resolve key planning matters prior to the submission of a planning application. This pre-application engagement should be proportionate to the nature of the scheme and those likely to be affected by it; and
 - b. Be accompanied by a concise planning statement setting out:
 - i. how the proposals are consistent with relevant development plan and national decision-making policies;
 - ii. the outcome of pre-application engagement and the extent to which the proposals have changed in response to this engagement; and
 - iii. the proposed use of any planning obligations to make the proposals acceptable in planning terms.
2. Proposals for other types of development should be supported by the minimum necessary information requirements to enable a decision. In certain circumstances, set out elsewhere in this Framework, this should include pre-application discussions (see policies CO2 and P4). Pre-application engagement may also be required where proposals raise complex planning matters, such as the potential effect on heritage assets.

DM2: Information requirements

1. To ensure a clear and consistent approach to the information required to determine development proposals, local validation lists setting out the information required in support of an application for development should include the information specified in the relevant national decision-making policies (summarised in Annex C).
2. Local validation lists should only include additional information requirements if there is a policy in the development plan requiring a specific further assessment. Any such additional information requirements should not be applied equally to all applications but should be proportionate to the scale of development and its potential impact. Where appropriate, the requirements should clearly distinguish between what is required for major, medium and other types of development proposal.

Determining development proposals

DM3: Determining development proposals

1. When considering development proposals, local planning authorities should:
 - a. Work with the applicant in a positive and proactive manner, where necessary seeking solutions to problems arising from initial proposals, to enable a timely decision;
 - b. Take a proportionate approach to the consideration of the planning matters raised by the proposals, in a way that reflects their scale, complexity and potential impact;
 - c. Take account of planning matters raised during any pre-application engagement, including any positive responses to this engagement, as well as representations on the proposals;
 - d. Consult statutory or internal consultees only where it is necessary to do so. Decisions on development proposals should not be delayed in order to secure advice from a statutory or internal consultee beyond their statutory deadlines unless there is insufficient information to make the decision or more detailed advice may enable an approval rather than a refusal;
 - e. Consider whether otherwise unacceptable development proposals could be made acceptable through the use of planning conditions or planning obligations; and
 - f. Not refuse applications for development which should clearly be approved, having regard to its accordancy with the development plan, the policies in this Framework and any other material considerations.

DM4: Emerging development plan proposals

1. When preparing and considering development proposals, relevant policies in emerging development plans may be given weight according to:
 - a. The stage of preparation of the emerging plan (the more advanced its preparation, the greater the weight that may be given);
 - b. The extent to which there are unresolved objections to relevant policies (the less significant the unresolved objections, the greater the weight that may be given); and
 - c. The degree of compliance of the relevant policies in the emerging plan with the policies for plan-making in this Framework (the closer the policies in the emerging plan to the policies in this Framework, the greater the weight that may be given to them).
2. Development proposals should not be refused on the grounds of being premature, other than in the limited circumstances where both:
 - a. The development proposal is so substantial, or its cumulative effect alongside other development proposals would be so significant, that to grant permission would undermine the plan-making process by predetermining decisions about the scale, location or phasing of new development that are central to an emerging plan; and

- b. The emerging plan is at an advanced stage but is not yet formally part of the development plan for the area. An emerging plan is unlikely to be in an advanced stage if a draft spatial development strategy, local plan, minerals and waste plan or supplementary plan has yet to be submitted for examination; or, in the case of a neighbourhood plan, the local planning authority publicity period on the draft plan has not ended.
3. Where planning permission is refused on grounds of prematurity, the reason for the refusal should indicate clearly how granting permission for the development proposal would prejudice the outcome of the plan-making process.

DM5: Development viability

1. Where development proposals accord with relevant up-to-date plan policies and national decision-making policies, they should be assumed to be viable. Relevant policies in this context are those which relate to the contributions expected from development.
2. There may be limited circumstances in which it would not be possible for development to proceed on a policy compliant basis, and a viability assessment to inform decision-making is justified to ensure that a proposed development makes the maximum possible contribution to affordable housing and other infrastructure. Such circumstances may include situations where:
 - a. The development is significantly different from any typology assumed in the development plan viability assessment;
 - b. Site characteristics differ substantially from the assumptions used to assess viability when the relevant development plan policies were prepared;
 - c. The development is demonstrably burdened by costs which were unforeseeable when the development plan was prepared; and/or
 - d. Site or economic circumstances have changed significantly since the development plan was prepared.
3. Neither the price paid for land, nor the price intended to be paid through an option agreement, should be a justification for failing to accord with relevant policies in the plan.
4. Where a viability assessment is submitted with a development proposal, this should be based upon and refer back to the viability assessment(s) that informed the relevant development plan policies. It should fully evidence all inputs and assumptions used in the assessment, and explain any differences from those used for viability assessment that informed the relevant plan policies. All viability assessments should reflect the recommended approach in planning practice guidance, utilising the standardised inputs set out in *[Annex X – to be added subject to the outcome of this consultation]*, and should be made publicly available.
5. These considerations should inform the decision maker's assessment of the weight to be given to a submitted viability assessment.
6. Where a viability assessment is submitted and contributions are reduced below the requirements set out in relevant development plan policies, decision makers should

consider using review mechanisms to seek policy compliance over the lifetime of the project, in accordance with planning practice guidance.

DM6: Use of planning conditions and obligations

1. Planning conditions should only be attached to planning permissions and other associated consents for development where they are:
 - a. Necessary to make the development acceptable in planning terms;
 - b. Relevant to the development and to planning considerations generally;
 - c. Sufficiently precise to make them capable of being complied with and enforced; and
 - d. Reasonable in all other respects.
2. Conditions should not be used to:
 - a. Require payments of money; or
 - b. Require that land is formally given up to another party (such as highways to the local highway authority); or
 - c. Restrict national permitted development rights unless there is clear justification to do so.
3. Where national model conditions are relevant to the development, they should be used unless there are strong reasons for using a different condition. Conditions that are required to be discharged before development commences should be avoided, unless there is a clear justification. Applications to discharge conditions should be dealt with in a timely manner to avoid unnecessary delays to development.
4. Planning obligations should only be used where it is not possible to address potential unacceptable impacts through a planning condition. Where national model planning obligations are relevant to the development, they should be used unless a different planning obligation is more appropriate.

DM7: Relationship with other regulatory regimes

1. Development proposals should be assessed on the basis of whether they would be an acceptable use of land. Matters which are controlled by separate regulatory regimes may, in the context of a particular development proposal, be a material consideration where they have land-use implications. Decision-makers should assume, unless there is clear evidence to the contrary, that those separate regimes will operate effectively.
2. Planning decisions should not seek to duplicate or extend controls imposed by separate regulatory regimes other than where there is a development plan policy in place applying optional technical standards for the development proposed (see policy PM13).
3. The parallel processing of planning and other regulatory consents is encouraged where this can help to align and expedite the consenting of development.

4. Where compliance under a separate regulatory regime requires subsequent changes to an approved development proposal, such changes should be approved unless they would mean the development is no longer acceptable when assessed against development plan and national decision-making policies.

DM8: Unauthorised development and enforcement

1. Where there has been unauthorised development and local planning authorities are considering whether enforcement action is expedient, they should take account of their local enforcement plan, the impact of the breach of planning control, and the extent to which the breach would otherwise be acceptable.
2. In cases of unauthorised development where consideration is being given to an application for retrospective planning permission (or through an enforcement appeal, whether to grant planning permission in respect of a breach of planning control), if it is concluded based on evidence that the unauthorised development was intentional, that fact should be given substantial weight in considering whether to grant planning permission.

Other routes to consent

DM9: Use of development orders

1. To provide certainty about the prospects of securing planning permission for specified forms of development, local planning authorities and Mayors are strongly encouraged to use Local Development Orders and Mayoral Development Orders, especially where this would support housing, regeneration, economic growth or environmental improvement. These orders should take account of the development plan and national decision-making policies, and set out precisely what development is permitted and how planning obligations will be secured.
2. Local planning authorities should also respond positively to any proposals from communities for Neighbourhood Development Orders and Community Right to Build Orders, working collaboratively with community organisations to resolve any issues before draft orders are submitted for examination.

DM10: Removal of national permitted development rights

1. The use of Article 4 directions to remove permitted development rights should:
 - a. Be limited to situations where it is necessary to protect local amenity or the wellbeing of the area (such as safeguarding against the demolition of local facilities, preventing an over-concentration of uses which could affect the quality of life or community cohesion, or supporting the vitality and viability of parts of town centres);
 - b. Be based on robust evidence; and
 - c. Apply to the smallest area possible.

4. Achieving sustainable development

The objective of the policies in this chapter is to meet development needs through sustainable patterns of development, including by maximising the potential for growth on suitable land within settlements, enabling development which will support the rural economy, rural communities and the provision of infrastructure, and limiting development away from settlements to help safeguard the intrinsic character and beauty of the countryside.

Plan-making policies

S1: Positive plan-making

1. The development plan should plan positively for future growth and change by:
 - a. Seeking to meet the development needs of their area as a minimum. For spatial development strategies, and for local plans where a spatial development strategy is not in place²², this means providing for objectively assessed needs for housing and other uses (including supporting infrastructure), as well as any needs that cannot be met within neighbouring areas, unless:
 - i. the application of the policies in this Framework that protect areas or assets of particular importance²³ provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or
 - ii. any adverse impacts of doing so would substantially outweigh the benefits, when assessed against the policies in this Framework taken as a whole.
 - b. Providing for new development, and improvement of the environment, in a way which promotes a sustainable pattern of growth and seeks to mitigate climate change and adapt to its effects.

S2: Producing a spatial strategy

1. The development plan should set out a spatial strategy setting clear expectations for the location of development and where land should be protected or enhanced for specific purposes, by identifying at an appropriate scale:
 - a. Settlements within the development plan area, whether existing or proposed, and their boundaries (or clear criteria for identifying settlement extents). Settlements should include any allocations that would ultimately form part of the settlement;
 - b. The location and boundary of town centres within settlements, or other specific areas where particular approaches to development apply;

²² Where a spatial development strategy is in place, the local plan should plan for the level of development provided for in the spatial development strategy covering the area of the local plan.

²³ The policies referred to are those in this Framework (rather than those in development plans) relating to: habitats sites and/or designated as Sites of Special Scientific Interest; land designated as Green Belt, Local Green Space, a National Landscape, a National Park (or within the Broads Authority) or defined as Heritage Coast; irreplaceable habitats; designated heritage assets; and areas at risk of flooding or coastal change.

- c. Land that is protected or proposed to be enhanced for specific purposes (such as habitat improvement) and which places limits on whether development proposals may be acceptable or where specific policies apply; and
 - d. Sites allocated for development to meet the identified need for housing and other uses in the area and for local and strategic infrastructure (including any proposals to enable the development of land around stations).
2. The spatial strategy should be illustrated on a key diagram forming part of a spatial development strategy and/or local plan, with the boundaries of specific policy areas, land-use designations and allocations identified on a policies map.

National decision-making policies

S3: Presumption in favour of sustainable development

- 1. Decisions on development proposals should apply a presumption in favour of sustainable development. This means:
 - a. Policy S4 in this Framework should be applied when considering development proposals within settlements;
 - b. Outside settlements, policy S5 should be applied; and
 - c. In all locations, development proposals that accord with an up-to-date development plan and also the decision-making policies in this Framework should be approved without delay.

S4: Principle of development within settlements

- 1. Development proposals within settlements should be approved unless the benefits of doing so would be substantially outweighed by any adverse effects, when assessed against the national decision-making policies in this Framework.
- 2. In applying policy S4, the circumstances in which the benefits of approving development are likely to be substantially outweighed by adverse effects include (but are not restricted to) situations where the development proposal would:
 - a. Have an unacceptable impact in relation to:
 - i. the allocation or safeguarding of land for particular uses in the development plan, unless there is no reasonable prospect of an application coming forward for the allocated use, or there is evidence that the safeguarding is no longer appropriate; or
 - ii. the application of the policies in this Framework for safeguarding existing open space, sport and recreation facilities (HC7), Local Green Space (HC8), designated wildlife habitats (N6) and for managing development within residential curtilages (L2); or
 - b. Involve the whole or partial loss of undeveloped land which is used for a cemetery or burial ground; or for water storage and/or flood risk management (unless suitable

compensatory provision is made which does not increase the risk of flooding either on or off-site); or

- c. Fail to comply with one of the national decision-making policies which state that development proposals should be refused in specific circumstances.

S5: Principle of development outside settlements

1. Only certain forms of development should be approved outside settlements, as set out in the following list. These should be approved, unless the benefits of doing so would be substantially outweighed by any adverse effects, when assessed against the national decision-making policies in this Framework:
 - a. Development proposals which are for: agriculture, horticulture and forestry; outdoor sport and recreation; allotments; cemeteries and burial grounds; mineral extraction; engineering operations and infrastructure (including for transport, energy and water); roadside facilities in accordance with policy TR5; and national defence and security;
 - b. Development for rural businesses and services, including tourism, where a location outside settlements is shown to be necessary;
 - c. The re-use, extension, alteration or replacement of an existing building, so long as the existing building is of permanent and substantial construction, and any extension or alteration will not result in a disproportionate increase in size compared to the existing building²⁴;
 - d. The redevelopment of previously developed land (including a material change of use to residential or mixed-use including residential);
 - e. Limited infilling within groups of houses;
 - f. An exception site as provided for in policy HO10, or development brought forward under a Community Right to Build Order or Neighbourhood Development Order;
 - g. Development which would address an evidenced unmet need for gypsy, traveller or travelling showpeople accommodation²⁵, provided it meets the criteria in policy HO12;
 - h. Development for housing and mixed-use development which would be: within reasonable walking distance of a railway station which provides a high level of connectivity to jobs and services²⁶; physically well-related to a railway station or a settlement within which the station is located; is of a scale which can be accommodated taking into account the existing or proposed availability of infrastructure; and where the development would not prejudice any proposals for long-

²⁴ The existing building is to be assessed as the property as existing on the date of the publication of this Framework.

²⁵ Including (but not limited to) where the relevant local planning authority lacks a five year supply of deliverable sites as set out in policy HO3(1)(c).

²⁶ Well-connected rail stations and underground, tram and light rail stops are those in a top 60 Travel to Work Area located partially or fully within England by Gross Value Added (GVA) and which, in the normal weekday timetable, are served (or have a reasonable prospect of being served due to planned upgrades or through agreement with the rail operator) throughout the daytime by four trains or trams per hour overall, or two trains or trams per hour in any one direction.

term comprehensive development in the same location;

- i. The development of land allocated for that purpose in the development plan (where this lies outside settlements); and
 - j. Development which would address an evidenced unmet need (including, but not limited to, development proposals involving the provision of housing where the local planning authority cannot demonstrate a five year supply of deliverable housing sites²⁷ or scores below 75% in the most recent Housing Delivery Test²⁸), and where the development would:
 - i. be well related to an existing settlement²⁹ (unless the nature of the development would make this inappropriate) and be of a scale which can be accommodated taking into account the existing or proposed availability of infrastructure; or
 - ii. comprise major development for storage and distribution purposes which accords with policy E3.
2. In applying this policy, the circumstances in which the benefits of approving development proposals are likely to be substantially outweighed by adverse effects include, but are not restricted to, situations where the development proposal would fail to comply with one of the national decision-making policies which state that development proposals should be refused in specific circumstances.
 3. Development proposals comprising isolated homes, which are those lying outside settlements or groups of houses, should not be approved other than in accordance with policy HO11.
 4. Any other development proposals which do not fall within one of the categories set out above should only be approved in exceptional circumstances, where the benefits of the proposal would substantially outweigh the adverse effects, including to the character of the countryside and in relation to promoting sustainable patterns of movement.
 5. The preceding parts of this policy do not apply to development proposals in the Green Belt or on land designated as Local Green Space, which should instead be determined in accordance with policies HC8, GB6, GB7 and GB8. However, where development is not inappropriate in the Green Belt (as set out in policy GB7), proposals should also be approved unless the benefits of doing so would be substantially outweighed by any adverse effects, when assessed against the national decision-making policies in this Framework.

S6: Neighbourhood plans and the presumption

1. For development proposals involving the provision of housing, the benefits of approving development are likely to be substantially outweighed by the adverse effects where a proposal would conflict with a neighbourhood plan, provided the following apply:

²⁷ See Annex D: Housing calculations and supply.

²⁸ See Annex D: Housing calculations and supply.

²⁹ Where a development proposal is located outside a settlement, and separated from the existing built-up area by virtue of being beyond the outside edge of an allocated site that has yet to be fully developed, consideration should be given to whether the proposal is in a suitable location should the allocated development not proceed.

- a. The neighbourhood plan became part of the development plan five years or less before the date on which the decision is made; and
- b. The neighbourhood plan contains allocation to meet its identified housing requirement (see policy HO2).

5. Meeting the challenge of climate change

The objective of the policies in this chapter is to support the transition to net zero by 2050 and to shape places in ways which are more resilient to the effects of climate change. It does this by setting out policies to shape places in ways that contribute to radical reductions in greenhouse gas emissions and adapt to the full range of current and potential impacts of climate change, by minimising vulnerability and improving resilience.

Plan-making policies

CC1: Planning for climate change

1. Development plans should take a proactive approach to mitigating climate change and supporting the transition to net zero³⁰. They should also take a proactive approach to adapting to climate change, taking into account the implications of extreme weather and long-term climate trends including overheating, wildfires, drought, flood risk, coastal change, water supply, biodiversity and landscapes. They should do this by:
 - a. Proposing development patterns through their spatial strategy and allocations which:
 - i. can help contribute to radical reductions in greenhouse gas emissions (which can be informed by an assessment of baseline carbon emissions and the potential effect of development options on future emissions and their mitigation); and
 - ii. avoid increased vulnerability and improve resilience to the effects of climate change (including through providing for necessary infrastructure improvements and the future relocation of homes and other uses where public safety would be at risk, for example as a consequence of coastal change);
 - b. Addressing any specific risks from climate change in their proposed allocations for development, and necessary adaptations, both of which should be considered for the anticipated lifetime of the development;
 - c. Setting local water efficiency standards for new development where these are justified in accordance with policy PM13; and
 - d. Identifying opportunities for green infrastructure provision and nature-based solutions which can safeguard and improve carbon storage, support nature recovery and resilience, and which take account of Local Nature Recovery Strategies in accordance with policy N1.

National decision-making policies

CC2: Mitigation of climate change

1. In order to contribute to climate change mitigation and the transition to net zero, development proposals should, where relevant to the proposal:

³⁰ In line with the objectives and provisions of the Climate Change Act 2008.

- a. Be located where a genuine choice of sustainable transport modes exists, and improve opportunities for walking, wheeling, cycling and public transport, in accordance with policies TR3 and TR4;
 - b. Support good access to facilities to limit the need to travel, whether through the development's location, through development densities which improve catchment populations for local services, or by incorporating community facilities and premises to support local employment opportunities;
 - c. Use design approaches which conserve energy and other resources in accordance with policy DP3(1)(c);
 - d. Take advantage of opportunities to re-use existing structures and materials, including by re-using non-contaminated excavated soil and hardcore within the site;
 - e. Take advantage of opportunities to draw low carbon energy from decentralised networks (such as district heat networks), where these are available, and to co-locate energy and heat generators and users, especially to take advantage of suppliers of surplus heat and energy;
 - f. Contribute to the creation or restoration of habitats which can act as carbon stores, such as through woodland planting and peatland restoration, while avoiding harm to habitats which can act as important carbon stores, including peatland and salt marsh; and
 - g. Not increase the extraction of fossil fuels unless it is in accordance with policy M5.
2. Substantial weight should be given to the benefits of improving the energy efficiency of existing buildings and/or drawing energy from district heat networks, renewable and low carbon sources (including through the installation of heat pumps and solar panels where these do not already benefit from permitted development rights).

CC3: Adaptation to climate change

1. Development proposals should take into account the current and potential impacts of climate change over the lifetime of the scheme, and in order to minimise vulnerability to these impacts should, where relevant to the proposal:
 - a. Be located where the risk of flooding is minimised, or can be managed and the development made safe without increasing risk elsewhere, in accordance with policies F4, F5, F6, F7 and F8;
 - b. Comply with policy F9 where development would be located in an area vulnerable to coastal change;
 - c. Incorporate sustainable drainage systems to manage surface water flow rates and reduce volumes of runoff in accordance with policy F8;
 - d. Use design approaches which minimise risks from overheating in accordance with policy DP3(1)(c), and include green infrastructure and suitable tree planting in accordance with policies DP3(1)(d) and N3; and

- e. Where development is, or is likely to be, at heightened risk from wildfires – such as where it is located adjacent to land used for agriculture, heathland or woodland – proposals should incorporate suitable mitigation measures, where possible, to reduce fuel loads and create defensible spaces (for example avoiding fire pathways such as fences, and incorporating firebreaks into development layouts and planting schemes).

6. Delivering a sufficient supply of homes

The objective of the policies in this chapter is to support the delivery of a substantial increase in the supply of homes and traveller sites, by ensuring that a sufficient amount and variety of land can come forward where needed. This includes planning for an appropriate mix of accommodation for the local community, and ensuring that land with permission is developed without unnecessary delay.

Plan-making policies

HO1: Assessing the need for homes

1. The preparation of spatial development strategies, and local plans where a spatial development strategy is not in place, should be based upon:
 - a. A housing need assessment that establishes the overall number of homes needed in the area as a minimum over the plan period, using the standard method in Annex D;
 - b. An assessment of the permanent and transit site accommodation needs of travellers in the area; and
 - c. An understanding of any accommodation needs that cannot be met within neighbouring areas.
2. At the most appropriate level, development plans should also take into account an assessment of the size, type and tenure of housing or other accommodation needed for different groups. These groups include, but are not limited to:
 - a. Those who require affordable housing (including Social Rent) as defined in the glossary;
 - b. Older people (including those who require retirement housing, housing-with-care and care homes);
 - c. Disabled people;
 - d. People who rent their homes;
 - e. Families with children;
 - f. Looked after children (evidence of need for which can be found in the relevant local authority's Children's Social Care Sufficiency Strategy);
 - g. Specialist community-based accommodation (where evidence of need is available for the relevant local authority);
 - h. Students;
 - i. Travellers; and

- j. People wishing to commission or build their own homes³¹.

HO2: Setting requirement figures for homes

1. Spatial development strategies should establish a housing requirement, and set pitch and plot requirements where a need has been identified, for each local planning authority within the strategy area. These figures should not be re-tested as part of local plan preparation unless there has been a significant change in circumstances which affects the overall requirement and its distribution to each local planning authority area.
2. Where a spatial development strategy is not in place, local plans should establish the housing requirement figure and pitch and plot requirements for their area, taking account of any relevant emerging spatial development strategy.
3. Housing requirement figures should:
 - a. Reflect the extent to which the identified needs of the area can be accommodated over the plan period as a minimum, in accordance with policy S1; and
 - b. Be higher than the overall figure identified in the local housing needs assessment where appropriate. This includes situations where a higher housing requirement is necessary to meet the needs of neighbouring areas, or where it reflects growth ambitions linked to economic development or infrastructure investment.
4. Pitch and plot requirements should reflect the extent to which identified permanent and transit site accommodation needs of travellers in the area can be accommodated over the plan period as fully as possible, in accordance with policy S1.
5. In the case of local plans, a housing requirement figure should also be set for designated neighbourhood plan areas, unless it is impractical to do so (because a neighbourhood planning area has been designated at a late stage in the local plan preparation process, or after the plan has been adopted, or in instances where the local plan is out of date; in which case the local planning authority should provide an indicative figure). This requirement figure should take into account factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority. Local planning authorities should avoid setting housing requirement figures for neighbourhood planning areas at nil other than where:
 - a. The local plan already meets or exceeds the housing need figure for the neighbourhood planning area;
 - b. The neighbourhood planning area has a clear and well evidenced need for no additional housing; or
 - c. The constraints within the neighbourhood planning area are so substantial as to preclude any additional housing of any kind from coming forward.

³¹ Under section 1 of the Self Build and Custom Housebuilding Act 2015, local authorities are required to keep a register of those seeking to acquire serviced plots in the area for their own self-build and custom house building. They are also subject to duties under sections 2 and 2A of that Act to have regard to this and to give enough suitable development permissions to meet the identified demand. Self and custom-build properties could provide market or affordable housing.

HO3: Providing land for homes

1. Local plans should identify a sufficient supply and mix of sites to meet or exceed the housing requirement figure and pitch and plot requirements for their areas over the plan period, drawing on the land availability assessment in accordance with policy PM9. This should include:
 - a. In relation to housing:
 - i. a supply of specific deliverable sites for five years following the intended date of adoption of the plan, with an appropriate buffer (as set out in Annex D; the Annex also sets out how a five year housing land supply should be calculated for decision-making purposes); and
 - ii. a supply of specific, developable sites or broad locations for growth for the subsequent years 6-10 and, where possible, for years 11-15 of the remaining plan period.
 - b. In relation to traveller sites:
 - i. a supply of specific deliverable sites for five years following the intended date of adoption of the plan (as set out in Annex D); and
 - ii. a supply of specific, developable sites or broad locations for growth for the subsequent years 6 to 10 and, where possible, for years 11-15 of the remaining plan period.
 - c. A trajectory showing the expected rate of housing and pitch and plot delivery over the plan period and, where appropriate, the anticipated rate of development for specific sites.
2. Where an allowance is to be made for windfall sites as part of the identified supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the land availability assessment, historic windfall delivery rates and expected future trends.

HO4: Land for large scale residential and mixed-use development

1. The development plan should identify suitable locations for large scale development, such as new settlements, new urban quarters or significant extensions to existing settlements. These locations should:
 - a. Be capable of being supported by the necessary infrastructure and facilities at appropriate points in the development's delivery (including complying with relevant aspects of policies TR1 and TR3, and taking advantage of any opportunities presented by existing or planned infrastructure investment);
 - b. Support a sustainable community, with sufficient access to services and employment opportunities within the development itself (without expecting an unrealistic level of self-containment), or in larger towns to which there is good access by sustainable transport modes; and

- c. Address strategic environmental opportunities and safeguards, including those set out in Local Nature Recovery Strategies.
2. Local plans should identify specific sites, infrastructure and other site-specific requirements for large-scale development, including:
- a. Setting clear expectations for the quality of places to be created (such as by following New Town principles and using design tools such as masterplans and design codes);
 - b. Making a realistic assessment of the likely rates of delivery and identifying opportunities for supporting rapid implementation, such as through joint ventures, land assembly or locally led development corporations; and
 - c. Supporting delivery by setting expectations for an appropriate mix of tenures which would meet the needs of different groups. This can include a mixture of ownership and rental tenures, including Social Rent, other rented affordable housing and build to rent, as well as housing designed for specific groups such as older people's housing and student accommodation, and plots for custom or self-build.

HO5: Meeting the needs of different groups

1. The development plan should, at the most appropriate level, set out policies to address the housing needs of different groups assessed under policy HO1. This should include:
- a. In relation to affordable housing:
 - i. setting requirements for the type and mix of affordable housing (applying the definition in Annex B) required to meet identified local needs, including the minimum proportion of Social Rent homes required, as part of major development. In Designated Rural Areas, development plans may set affordable housing requirements for residential developments which are not major development; and
 - ii. setting a specific affordable housing requirement (or requirements) for major development involving the provision of housing on land which is proposed to be released from the Green Belt, or which may be approved on land within the Green Belt³².
 - b. In relation to accessible housing, setting out the proportion of new housing that should be delivered to requirement M4(2) and M4(3) of the Building Regulations. M4(2) requirements should reflect local levels of need, and should ensure that at least 40% of new housing delivered over the course of the plan is delivered to M4(2) or M4(3) standards.
 - c. Identifying sites, or setting requirements for parts of allocated sites, which can provide specific types of housing where there is an identified need, including (but not limited to):

³² This requirement may be set as a single rate or be set at differential rates, and should:

- i. be set at a higher level than that which would apply to land which is not within or proposed to be released from the Green Belt; and
- ii. require at least 50% of the housing to be affordable, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability).

- i. specialist housing for older people;
 - ii. purpose-built accommodation for students;
 - iii. plots for self and custom build housing; and
 - iv. sites suitable for gypsies and travellers and travelling showpeople, including sites suitable for mixed residential and business uses, having regard to the safety and amenity of the occupants and neighbouring residents. Sites identified for travelling showpeople should have regard to their need for mixed-use yards with both residential accommodation and space for storage of equipment.
- d. Setting out policies for the mix of tenures to be provided on sites for 150 homes or more. This mix should be informed by the needs of different groups assessed under policy HO1.

HO6: Planning for a diverse mix of sites

1. To support the provision of a diverse mix of sites, local plans should:
 - a. Allocate land to accommodate at least 10% of the housing requirement on sites no larger than one hectare, and a further 10% on sites of between one and two and a half hectares, unless there are strong reasons why these targets cannot be achieved; and
 - b. Allocate sites which will support and enhance the vitality of rural communities and enable villages to grow and thrive, especially where this will support local services.

National decision-making policies

HO7: Meeting the need for homes

1. In applying the policies in this Framework, substantial weight should be given to the benefits of providing accommodation that will contribute towards meeting the evidenced needs of the local community, taking into account any up-to-date local housing need assessment, and other relevant evidence (including the extent to which there is a five year supply of deliverable housing and traveller sites, and performance against the Housing Delivery Test).

HO8: Providing affordable homes

1. Development proposals should meet or exceed up-to-date development plan requirements for the proportion and mix of affordable housing tenures relevant to the location, including the minimum proportion of Social Rent. This should be provided on-site unless:
 - a. Off-site delivery on an alternative nearby site would optimise the quality or quantity of homes built; or
 - b. A cash payment in lieu of on or off-site provision can be justified robustly, and the agreed approach contributes towards the objective of creating mixed and balanced communities.

2. Development proposals that include military affordable housing should not be required to meet development plan requirements for the mix of affordable housing tenures (including the minimum proportion of Social Rent). These proposals should:
 - a. Demonstrate an evidenced unmet need for military affordable housing (as provided by the Ministry of Defence); and
 - b. Meet development plan requirements for the proportion of affordable housing on the site. This includes where military affordable housing is the only form of affordable housing provided, or where military affordable housing is delivered alongside other tenures of affordable housing.
3. Where development proposals meet or exceed up-to-date development plan requirements for the proportion and mix of affordable housing tenures, including the minimum proportion of Social Rent properties, a flexible approach should be taken to the application of any development plan requirements relating to the size of market homes, taking into account prevailing market conditions.

HO9: Specialist forms of accommodation

1. Development proposals to address specialist housing needs should provide living conditions and access to services which are appropriate to the needs of their residents and users. This includes:
 - a. Housing for older people:
 - i. being located where residents will be able to access frequently-used services easily and safely by walking, wheeling (including mobility scooters) and public transport; including through on-site provision where applicable; and
 - ii. being delivered to M4(2) or M4(3) accessibility standards.
 - b. Specialist community-based accommodation:
 - i. being supported by a management plan or other supporting evidence which shows how the development will provide a safe and secure environment for residents; and
 - ii. being located where residents will be able to access frequently-used services (such as education facilities) easily and safely.
 - c. Purpose-built student and large-scale shared living accommodation:
 - i. being located where residents will be able to access frequently-used services (and, for student accommodation, relevant education facilities) easily and safely by walking, wheeling or public transport;
 - ii. providing adequate living and storage space and sufficient shared cooking, laundry and amenity areas (other than where cooking and laundry facilities are provided within student rooms, in which case these do not need to be available on a shared basis); and

- iii. being supported by a management plan which shows how the development will be managed and maintained to ensure the continued quality of the accommodation, communal facilities and services (and which should be secured by means of a planning condition).

HO10: Exception Sites

1. Development proposals for housing or traveller sites on land not already allocated for this purpose, and which are located outside settlements, should be supported where they are:
 - a. A rural exception site (as defined in the glossary of this Framework) that will provide affordable housing or affordable traveller sites to meet identified local needs – as evidenced through a local housing needs survey or secondary data which is no more than five years old; or
 - b. Sites which comprise community-led development which would not qualify as a rural exception site, but which include one or more types of affordable housing as defined in the glossary of this Framework.
2. Unless otherwise specified in the development plan, exception sites brought forward in one of these two ways should:
 - a. Adjoin or be physically well-related to settlements;
 - b. Be no larger than 1 hectare in size, or exceed 5% of the size of the existing settlement; and
 - c. Comprise a majority of affordable housing or affordable traveller pitches. A proportion of market homes may be allowed on the site where essential to enable the delivery of affordable units without grant funding.

HO11: Isolated homes in the countryside

1. Development proposals for isolated homes in the countryside should only be supported where one or more of the following circumstances apply:
 - a. There is an essential need for a rural worker, including those taking majority control of a farm business, to live permanently at or near their place of work in the countryside;
 - b. The development would be appropriate enabling development to secure the future of heritage assets in accordance with policy HE5;
 - c. The development would re-use redundant or disused buildings and enhance its immediate setting, including specifically securing the long-term reuse of a vacant or underused listed building, weighing this against any harm as in policy HE6;
 - d. The development would involve the subdivision of an existing residential building; or
 - e. The design is of exceptional quality, in that it:
 - i. is truly outstanding, reflecting the highest standards in architecture, and would help to raise standards of design more generally in rural areas; and

- ii. would significantly enhance its immediate setting, and be sensitive to the defining characteristics of the local area.

HO12: Traveller Sites

1. Development proposals for traveller sites should be located and designed so that they:
 - a. Provide a settled base that limits the need for long-distance travelling and potential environmental damage caused by unauthorised encampment, while recognising the extent to which traditional lifestyles (whereby some travellers live and work from the same location thereby omitting many travel to work journeys) can contribute to sustainability;
 - b. Enable access to education, welfare, and health services, including ensuring that children can attend school on a regular basis;
 - c. Promote opportunities for healthy lifestyles, such as by providing adequate landscaping and play areas for children, and minimising adverse impacts from local environmental factors (such as noise and air quality) on the health and wellbeing of travellers that may locate there; and
 - d. Do not enclose the site such that the site and its occupants appear to be isolated from the rest of the community.
2. Alongside the criteria in this policy, when considering proposals for traveller sites, local planning authorities should take into account:
 - a. The existing level of local provision and need for additional sites;
 - b. Other personal circumstances which may be relevant; and
 - c. That applications for sites from any travellers should be considered and not just those with local connections.
3. Where development proposals require the permanent or temporary relocation of an authorised traveller site, an alternative site should be identified and provided. Alternative sites should take into account existing family or community groupings where possible, and involve residents occupying existing pitches, sites or plots in planning any unavoidable relocations to ensure satisfactory solutions are achieved.

HO13: Build out of residential and mixed-use development

1. To significantly boost the supply of homes, it is important that land with permission is developed without unnecessary delay. Proposals for major residential and mixed-use development should be capable of bringing housing forward within a reasonable period, taking into account the proposed housing tenure mix for the development, local market conditions (including absorption rates) and the development history of the site.
2. Consideration should be given to whether to impose a planning condition requiring that development begins within a timescale shorter than the relevant statutory default period, where this would expedite the development without threatening its implementation or

viability.

3. Where there are development proposals for large scale residential and mixed-use development which will be implemented through multiple phases across development plan periods, the consenting framework for the proposal should:
 - a. Secure the approach to design, infrastructure and other site-specific requirements for the development, including the scale of affordable housing; and
 - b. Be flexible enough to respond positively to changing circumstances as phases are brought forward, including changes to housing need, viability and design.
4. Development proposals affecting sites for large scale residential and mixed-use development set out in emerging development plans should not be inconsistent with the proposed scale, location and phasing of those emerging proposals.

7. Building a strong, effective economy

The objective of the policies in this chapter is to enable businesses to invest, expand and adapt in a way that reflects the opportunities, challenges and characteristics of different areas, and supports long term economic growth both locally and nationally.

Plan-making policies

E1: Providing the conditions for long term economic growth

1. To support business investment and employment, development plans should, at the most appropriate level:
 - a. Set out a clear economic vision and strategy, which takes a positive, proactive and realistic approach to encouraging sustainable economic growth in both urban and rural areas, having regard to the Industrial Strategy³³ and any relevant strategic and local strategies for economic development and regeneration. In doing so they should take into account both local business needs and wider opportunities for economic growth, including priority places for investment in key sectors set out in the Industrial Strategy, and the location of Industrial Strategy Zones³⁴ and AI Growth Zones;
 - b. Seek to address potential barriers to investment, such as inadequate infrastructure, services or housing, or a poor environment; and
 - c. Allocate sites to implement the economic vision and strategy and meet existing and anticipated needs over the plan period, paying particular regard to facilitating development to meet the needs of a modern economy (including sites and premises which are flexible and adaptable) and the specific locational requirements of different sectors. This includes, where a need exists or is anticipated, making provision for:
 - i. clusters, networks and sites for knowledge and data-driven, creative or high technology industries; and for new, expanded or upgraded facilities and infrastructure to support the growth of these industries (including laboratories, campus facilities, data centres and associated generating capacity, and grid connections);
 - ii. storage and distribution operations at a variety of scales and in suitably accessible locations that allow for the efficient and reliable handling of goods, especially where this is needed to support the supply chain (including 'last mile' deliveries), transport innovation and decarbonisation; and
 - iii. the expansion or modernisation of other businesses of local, regional or national importance to support economic growth and resilience (including industries such as leisure and tourism which may be of particular importance in certain areas).

³³ Invest 2035: The UK's Modern Industrial Strategy (UK Government, June 2025) identifies priority sectors for growth and support as: advanced manufacturing; clean energy industries; creative industries; defence industries; digital and technology businesses; financial services; life sciences; and professional and business services.

³⁴ Industrial Strategy Zones Action Plan (MHCLG, June 2025).

2. Given changing commercial property requirements, development plans should not be overly prescriptive about the types of uses that would be acceptable on particular sites (other than where there is a clear and justified rationale for being specific about acceptable uses at the plan-making stage).

National decision-making policies

E2: Meeting the need for business land and premises

1. To support business growth, substantial weight should be given to:
 - a. The economic benefits of proposals for commercial development which allow businesses to invest, expand and adapt; especially where this would support the economic vision and strategy for the area, the implementation of the Industrial Strategy³⁵, support improvements in freight and logistics and/or reflect proposals for Industrial Strategy Zones and AI Growth Zones;
 - b. Benefits for domestic food production, animal welfare and the environment which can be demonstrated through proposals for development for farm and agricultural modernisation.
2. Where a development proposal is required to demonstrate whether an unmet need exists (including to demonstrate compliance with policy S5) consideration should be given to whether:
 - a. Market signals indicate an undersupply of specific types of land or premises, taking into account the anticipated catchment area for the type of development proposed, the changing needs of different sectors and the availability of existing land and buildings; or
 - b. A development proposal's specific locational requirements are met by existing allocations in the development plan. This includes, but is not limited to, situations where:
 - i. existing businesses plan to expand or improve their premises, or clusters or networks of businesses need to grow (such as clusters of knowledge and data-driven, creative or high technology industries and associated facilities and infrastructure); or
 - ii. the availability of infrastructure (such as adequate grid connections or water and wastewater capacity) makes certain locations particularly important, including opportunities to co-locate large-scale generators and users of power (such as data centres); or
 - iii. proposals would meet a local, regional or national need for the provision of new, expanded or upgraded facilities that would result in more efficient, reliable or sustainable handling of goods (whether for their receipt, storage, processing, interchange or distribution).

³⁵ Invest 2035: The UK's Modern Industrial Strategy (UK Government, June 2025) identifies priority sectors for growth and support as: advanced manufacturing; clean energy industries; creative industries; defence industries; digital and technology businesses; financial services; life sciences; and professional and business services.

E3: Freight and logistics

1. To support the effective and efficient movement of goods, development proposals for freight and logistics uses and associated infrastructure should:
 - a. Have good access to transport networks (including via sustainable transport modes where possible) appropriate to the type of development;
 - b. Be sited and designed to limit environmental impacts (such as through the co-location or intensification of facilities to limit vehicle movements, and sensitive building design and landscaping). The impact on local residents or other neighbouring uses should be acceptable, taking into account proposed mitigation, especially where night-time activity will be required; and
 - c. Provide sufficient and secure parking for lorries or other vehicles to cater for the anticipated use.

E4: Rural business development

1. In applying policy E2, the sustainable growth of businesses in rural areas should be supported, including through:
 - a. The conversion of existing buildings and well-designed new buildings;
 - b. The development and diversification of agricultural and other land-based businesses;
 - c. Facilities to support rural leisure and tourism and measures to retain and expand accessible local shops and services; and
 - d. Development to maintain and enhance farm viability and sustainability and support domestic food production, such as better accommodation for livestock, on-farm reservoirs, greenhouses, polytunnels, farm shops and temporary accommodation for seasonal workers (where this accommodation is ancillary to the agricultural use and not for permanent occupation).
2. Development proposals to meet business needs in rural areas may need to be located outside settlements, and in locations that are not well served by public transport. In these circumstances:
 - a. Development proposals should take opportunities, where they exist, to use previously developed land, and sites that are physically well-related to existing development; and
 - b. The siting and design of development should be appropriate having regard to the character of its surroundings.

8. Ensuring the vitality of town centres

The objective of the policies in this chapter is to promote the long-term vitality and viability of town centres by prioritising them as locations for main town centre uses and allowing them to adapt to changing community and business needs, in a way which reflects their locally distinctive roles and opportunities.

Plan-making policies

TC1: Planning for town centres

1. To promote the long-term vitality and viability of town centres³⁶, development plans should, at the most appropriate level:
 - a. Be informed by a strategy for town centres in the area, to ensure that the full range of potential needs and opportunities for development is considered, including the scope to accommodate additional floorspace, to broaden the mix of uses (including residential uses) and to bring vacant sites and premises back into use;
 - b. Set out the hierarchy of centres, and any areas within them where specific policies on the nature and scale of development apply, including:
 - i. the extent of town centres;
 - ii. areas particularly suitable for a greater diversity and/or intensification of use, including through residential development; and
 - iii. areas within which infrastructure and public realm improvements are proposed.
 - c. Allocate a range of suitable sites in town centres to meet the scale and type of main town centre uses needed over the plan period in these locations, as well as for any complementary uses. Before reviewing town centre boundaries to accommodate any increase in development which is needed, existing vacant town centre sites and areas that are particularly suitable for intensification should be considered to maximise effective use of land;
 - d. Where suitable and viable town centre sites are not available for main town centre uses, allocate appropriate edge of centre sites that are well connected to the town centre. If sufficient edge of centre sites cannot be identified, policies should set out proposals for identified needs to be met in other accessible locations that are well connected to the town centre; and
 - e. Where appropriate, set a locally defined floorspace threshold for development proposals outside town centres, above which an impact assessment would be required, as set out in policy TC4.

³⁶ For the purpose of this chapter 'town centres' includes city, town, district and local centres as defined in the glossary.

2. Local planning authorities should consider the use of design guides, design codes and masterplans to support their vision for, and the development of, town centres. They should also consider the use of Article 4 directions to remove a permitted development right where these are justified as a means to support the vitality and viability of particular centres and maintain their character.

National decision-making policies

TC2: Development in town centres

1. In considering proposals for development in town centres, substantial weight should be given to the benefits of:
 - a. Supporting the overall vitality and viability of the centre, including where this can be achieved through the diversification of uses, intensification and provision of residential accommodation (provided this would not conflict with policies in the development plan for specific locations); and
 - b. Improving or retaining access to local shops and other facilities which provide day-to-day services for the local community.

TC3: Main town centre uses outside town centres

1. A sequential test should be applied to proposals for main town centre uses for which planning permission is required, where these are neither in an existing centre nor in accordance with an allocation for that purpose in an up-to-date development plan.
2. The sequential test means that main town centre uses involving new development should be located within town centres identified in the development plan; then, if this is not feasible, in edge of centre locations; and only if suitable sites are not available (or expected to become available within a reasonable period) should out of centre sites be considered. When considering edge of centre and out of centre locations, preference should be given to accessible sites which are well connected to the town centre.
3. Applicants and local planning authorities should exercise flexibility when considering issues such as format and scale, so that opportunities to utilise suitable town centre or edge of centre sites are fully explored. In doing so it is not necessary to demonstrate that a potential town centre or edge of centre site can accommodate precisely the scale and form of development proposed, and it should be considered whether the type of development proposed could be accommodated across multiple sites.
4. Where a development proposal fails to satisfy the sequential test, or is likely to have a significant adverse impact on one or more of the considerations in policy TC4, it should be refused.
5. This sequential test does not apply to applications for small scale rural offices or other small scale rural development.

TC4: Assessing the impact of development on town centres

1. Development proposals for retail and leisure uses located outside town centres should be accompanied by an impact assessment if the proposal exceeds a floorspace threshold

set out in an up-to-date development plan, and is not on a site which is allocated for the proposed use in the plan. If no threshold for impact assessments has been set in the development plan, a default threshold of 2,500m² gross floorspace should be applied.

2. In circumstances where an impact assessment is required, it should be demonstrated that the development would be unlikely to have a significant adverse impact on:
 - a. Existing, committed and planned public and private investment in a town centre or centres in the catchment area of the proposal; and
 - b. Town centre vitality and viability, including local consumer choice and trade in the town centre and the wider retail catchment (as applicable to the scale and nature of the scheme).

9. Supporting high quality communications

The objective of the policies in this chapter is to enable the expansion and upgrading of telecommunications infrastructure to meet changing technological, social, business and security requirements (including securing coverage of standalone 5G in all populated areas, and nationwide gigabit-capable broadband), in ways which limit an unnecessary proliferation of equipment and respect important environmental safeguards.

National decision-making policies

CO1: Proposals for telecommunications infrastructure

1. Development proposals for the expansion or upgrading of electronic telecommunications networks, including (but not limited to) next generation wireless technologies (such as standalone 5G), gigabit-capable broadband connections and supporting infrastructure such as fibre exchanges, should:
 - a. Use existing masts, buildings and other structures already employed for this purpose, unless there is no reasonable opportunity to do so (taking into consideration meeting consumer needs, the efficient operation of the network and providing reasonable capacity for future expansion);
 - b. Be sited and designed to minimise the visual impact of the proposals, especially in situations where a new site or structure is proposed;
 - c. Not result in cumulative exposure to non-ionising radiation exceeding International Commission guidelines³⁷ when the development is operational; and
 - d. Not cause significant and irremediable interference with other electrical equipment, air traffic services or instrumentation operated in the national interest.
2. In assessing proposals for telecommunications infrastructure, local planning authorities should not require minimum distances to be maintained between telecommunications infrastructure and other development, seek to prevent competition between different operators, question the need for the expansion or upgrading of telecommunications networks, or use health safeguarding standards different from the International Commission guidelines on non-ionising radiation protection.

CO2: Supporting information for telecommunications infrastructure proposals

1. Development proposals for electronic telecommunications infrastructure (including applications for prior approval under the General Permitted Development Order, as amended) should be supported by the following, where relevant:
 - a. Information on the outcome of pre-submission consultation with organisations with an interest in the proposed development (in particular with the relevant body where a mast is to be installed near a school or college, or within a statutory safeguarding zone surrounding an aerodrome, technical site or military explosives storage area), summarising the issues raised and how these have been addressed;

³⁷ [International Commission on Non-Ionizing Radiation Protection guidelines](#).

- b. Where a new site or structure is proposed, evidence that the applicant has sought to keep the number of these to a minimum in accordance with policy CO1(1)(a). This should include evidence that the possibility of erecting any antennas on an existing building, mast or other structure has been explored; and
- c. Evidence in support of the requirements in policy CO1(1)(c) and (d), including a statement that self-certifies that the cumulative exposure, when operational, will not exceed International Commission guidelines on non-ionising radiation protection.

10. Securing clean energy and water

The objective of the policies in this chapter is to support the development and operation of energy and water infrastructure in ways which align with wider development, clean power and net zero objectives (including the delivery of clean power by 2030).

Plan-making policies

W1: Planning for energy and water

1. The development plan should be informed by early engagement between the relevant plan-making authority, utility providers, regulators and network operators, so that there is a clear understanding of energy supply and network capacity, water supply, drainage and wastewater capacity, and associated requirements for additional infrastructure provision. This engagement should take into account the impacts of planned growth, changing consumption patterns and climate change, as well as relevant infrastructure plans³⁸, and be used to address potential constraints to development arising from current or anticipated infrastructure shortfalls.
2. The development plan should reflect this at the most appropriate level by:
 - a. Making provision for development which is required for new or enhanced renewable and low carbon energy development, electricity network infrastructure, water supply, drainage and wastewater infrastructure, whether as part of wider development proposals or as stand-alone developments; and
 - b. Setting out any measures to avoid constraints on the operation or future expansion of renewable and low carbon energy development and electricity network infrastructure and water supply and wastewater infrastructure as a result of neighbouring (or nearby) development.

W2: Securing renewable and low carbon energy, and electricity network infrastructure

1. The development plan should support the transition to clean power by planning positively for the increased supply and use of renewable and low carbon energy and electricity network infrastructure. This means that the development plan, should, at the most appropriate level, seek to maximise the potential for suitable development by identifying:
 - a. Areas which are suitable for renewable and low carbon energy development and electricity network infrastructure, including for future re-powering and life extension, where this would help secure their development; and
 - b. Opportunities for development to draw its heat or energy supply from decentralised networks (such as district heat networks), renewable or low carbon energy supply systems, and for co-locating potential customers and suppliers of surplus heat or energy³⁹.

³⁸ This includes Water Resource Management Plans, Drainage and Wastewater Management Plans and, once they are published, the Strategic Spatial Energy Plan (SSEP), Centralised Strategic Network Plan (CSNP) and Regional Energy Strategic Plans (RESs).

³⁹ Once adopted, there should be consideration of Heat Network Zones.

National decision-making policies

W3: Renewable and low carbon energy development and electricity network infrastructure

1. In considering proposals for renewable and low-carbon energy development and electricity network infrastructure, substantial weight should be given to:
 - a. The benefits of such development for improving energy security, supporting economic development and moving to a net zero future;
 - b. In the case of applications for the re-powering and life-extension of existing sites, the additional benefit of utilising an established site for this purpose; and
 - c. The contribution that small-scale and community-led renewable and low carbon energy projects can make to reducing emissions, along with their associated economic and social benefits.
2. Applicants should not be required to demonstrate the need for renewable or low carbon energy development and electricity network infrastructure. Where proposals for this form of development come forward outside areas which have been identified as suitable for them they should be acceptable when assessed against the national decision-making policies in this Framework, taken as a whole.
3. Where development is expected to be time-limited, applications should be accompanied by proposals for decommissioning and site restoration, including details of how these measures are expected to be implemented.

W4: Water infrastructure

1. In considering proposals for water supply, drainage and wastewater development, substantial weight should be given to:
 - a. The benefits of providing the capacity needed to serve proposed development as well as improving the security of supply and capacity for existing users (both residential and commercial, including agricultural users); and
 - b. Improving water quality and reducing water-borne pollution.
2. Applicants should not be required to demonstrate the need for water infrastructure developments.

11. Facilitating the sustainable use of minerals

The objective of the policies in this chapter is to ensure there is a sufficient supply of minerals to provide the infrastructure, buildings, green energy and goods that the country needs, while at the same time restricting specific types of minerals development that could harm environmental objectives. Since minerals are a finite natural resource, and can only be worked where they are found, best use needs to be made of them to secure their long-term conservation.

Plan-making policies

M1: Planning for a sufficient supply of minerals

1. The development plan should provide for a sufficient supply of minerals of national and local importance.
2. This means that in relation to aggregate minerals, the development plan should:
 - a. Use the Local Aggregate Assessment, the advice of the Aggregate Working Parties and the National Aggregate Co-ordinating Group as appropriate, and any published National and Sub National Guidelines on future supply, to identify the provision needed in the plan area⁴⁰. The Local Aggregate Assessment should be prepared annually, either individually or jointly, to forecast future demand, based on a rolling average of 10 years' sales data and other relevant local information and an assessment of all supply options (including marine dredged, secondary and recycled sources);
 - b. Allocate sites and/or identify preferred areas to maintain this provision, including landbanks of at least 7 years for sand and gravel and at least 10 years for crushed rock (longer periods may be appropriate to take account of the need to supply a range of types of aggregates, locations of permitted reserves relative to markets, and the productive capacity of permitted sites);
 - c. Calculate and maintain separate landbanks for any aggregate materials of a specific type or quality which have a distinct and separate market; and
 - d. Ensure that large landbanks bound up in very few sites do not stifle competition.
3. In relation to industrial minerals, the development plan should:
 - a. Use evidence of existing site capacities and demand to identify the level of provision needed to maintain a continuing level of supply for their use in industrial and manufacturing processes; and through cooperation with neighbouring and more distant authorities, identify how these requirements can be met through the allocation of sites and/or identification of preferred areas, taking into account the distribution of industrial minerals deposits;
 - b. Maintain reserves of:

⁴⁰ The assessment of the provision needed for aggregate and industrial minerals may, where appropriate, be undertaken and set out through the preparation of spatial development strategies.

- i. at least 10 years for individual silica sand sites;
 - ii. at least 15 years for silica sand sites where significant new capital is required, and for cement primary (chalk and limestone) and secondary (clay and shale) materials to maintain an existing plant; and
 - iii. at least 25 years for brick clay, and for cement primary and secondary materials where this is needed to support a new kiln.
- c. Take account of the need for the provision of brick clay from a number of different sources to enable appropriate blends to be made.
4. In relation to oil and gas, the development plan should distinguish between, and plan for, the three phases of development (exploration, appraisal and production) within licenced areas. The development plan should not identify new sites or extensions to existing sites outside licenced areas.
5. The development plan should not identify new sites or extensions to existing sites for peat or coal extraction.
6. Relevant development plan policies should take account of the contribution that substitute or secondary and recycled materials and minerals waste can make to supply, in preference to the extraction of primary materials, whilst aiming to source minerals supplies indigenously. Where further extraction is necessary, landbanks of non-energy minerals should so far as practical be maintained through sites which lie outside National Parks, the Broads, National Landscapes and designated heritage assets, although the identification of sites or preferred areas in development plans should also reflect that minerals can only be worked where they are found.

M2: Safeguarding mineral resources and infrastructure through plan-making

1. The development plan should:
- a. Define Mineral Safeguarding Areas and (in two tier areas) Mineral Consultation Areas to support the safeguarding of mineral resources;
 - b. Where necessary to prevent the sterilisation of mineral resources, require the prior extraction of minerals on sites allocated for non-mineral development, where practical and environmentally feasible; and
 - c. Identify existing, planned and potential sites which need to be safeguarded for: the bulk transport, handling and processing of minerals; the manufacture of concrete and concrete products; and the handling, processing and distribution of substitute, recycled and secondary aggregate material.

National decision-making policies

M3: Assessing the benefits of mineral development

1. In assessing proposals for minerals development⁴¹, substantial weight should be given to the benefits of mineral extraction, including to the economy. In this context, particular importance should be given to:
 - a. Maintaining minimum reserves of aggregates and industrial minerals, as specified in policy M1(2)(b) and M1(3)(b);
 - b. Ensuring that the capacity of operations to supply a wide range of materials is maintained (with reserves which are sufficient to support the level of actual and proposed investment required for new or existing plant, and the maintenance and improvement of existing plant and equipment);
 - c. Processing secondary aggregates, where this can help to reduce the need for new extraction;
 - d. Facilitating the exploration and extraction or processing of critical and growth minerals, the use of which supports any or all of the following:
 - i. the green energy transition;
 - ii. the delivery of net zero;
 - iii. national security; and
 - iv. the growth of key sectors set out in the Industrial Strategy⁴².
 - e. Maintaining a supply of building and roofing stone for the repair or extension of historic buildings and structures, or where the use of traditional materials is important to conserve or enhance the character of an area. The duration of planning permission should, where appropriate, give the flexibility needed to cater for the intermittent or low rate of working at many sites.

M4: Considering the impacts of mineral development

1. Proposals for mineral development should:
 - a. Not have unacceptable adverse impact on the natural and historic environment, human health or aviation safety, including as a result of any cumulative effect of multiple impacts from individual sites and/or from a number of sites in a locality;
 - b. Ensure any unavoidable noise, dust and particle emissions and any vibrations from

⁴¹ Other than for development involving peat, coal or onshore oil and gas extraction, to which this policy does not apply.

⁴² Invest 2035: The UK's Modern Industrial Strategy (UK Government, June 2025) identifies priority sectors for growth and support as: advanced manufacturing; clean energy industries; creative industries; defence industries; digital and technology businesses; financial services; life sciences; and professional and business services.

blasting will be controlled, mitigated or removed at source, and that appropriate noise limits are established for extraction in proximity to noise sensitive properties (recognising that some noisy short-term activities, which may otherwise be regarded as unacceptable, are unavoidable to facilitate minerals extraction); and

- c. Provide for restoration and aftercare at the earliest opportunity, to be carried out to high environmental standards, through the application of appropriate conditions. Bonds or other financial guarantees to underpin planning conditions should only be sought in exceptional circumstances.

M5: Development involving peat, coal or onshore oil and gas

1. Proposals for the extraction of peat at new or extended sites should be refused.
2. Development involving surface or underground coal workings, or for onshore oil and gas extraction, should not be approved unless it is necessary:
 - a. To facilitate the exploration, appraisal or production of oil and gas within licensed areas; or
 - b. For public safety; or
 - c. To facilitate the capture and use of methane from coal mines in active and abandoned coalfield areas.
3. If proposals for surface or underground coal extraction come forward under the criteria listed above, minerals planning authorities should provide for coal producers to extract separately, and if necessary stockpile, fireclay so that it remains available for use.
4. Minerals planning authorities should support proposals for underground gas and carbon storage and associated infrastructure if local geological circumstances indicate its feasibility. It should also be ensured that the integrity and safety of underground storage facilities are appropriate, taking into account the maintenance of gas pressure, prevention of leakage of gas and the avoidance of pollution.

M6: Safeguarding mineral resources and infrastructure through decision-making

1. Proposals for non-mineral development should not:
 - a. Constrain likely or foreseeable future use for mineral working in a Mineral Safeguarding Area; or
 - b. Prevent the use of existing, planned and potential sites for:
 - i. the bulk transport, handling and processing of minerals;
 - ii. the manufacture of concrete and concrete products; or
 - iii. the handling, processing and distribution of substitute, recycled and secondary aggregate material.
2. Where proposals for non-mineral development are located within a Minerals Consultation

Area, the decision-making authority should consult the mineral planning authority and take account of the local minerals plan before determining the planning application.

3. The prior extraction of minerals, where practical and environmentally feasible, should be approved where it would prevent the sterilisation of minerals deposits as a consequence of other forms of development proposals or allocations.

12. Making effective use of land

The objective of the policies in this chapter is to promote the effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

Plan-making policies

L1: Planning for an effective use of land

1. To support the effective and efficient use of land the development plan should, at the most appropriate level:
 - a. Identify ways of accommodating as much as possible of the development required in the area on previously developed land, including by:
 - i. allocating small, medium and large sites which have the potential for redevelopment to secure a more effective use, such as through the re-use of service yards, car parks and other transport infrastructure, under-utilised retail sites and estate regeneration schemes;
 - ii. using design guides and design codes to establish common design principles that illustrate opportunities in the area for making more effective use of land, including on small sites; such as proposals to fill gaps in the prevailing roof line, the redevelopment of low-density residential plots, introducing higher buildings at street corners and infill development within residential curtilages;
 - iii. setting minimum residential density standards for town centres and for locations that have a high level of connectivity, where this can support more effective land use and extend beyond the requirements of policy L3; and
 - iv. identifying whether minimum density standards should be set for other parts of the plan area, especially where there are opportunities for intensification. It may be appropriate to set out a range of densities that reflect the identified need for different types of housing, local market conditions, the availability of infrastructure and its scope for improvement, the importance of securing well-designed, attractive and healthy places, and the desirability of maintaining an area's prevailing character or of promoting regeneration and change.
 - b. Contain policies to optimise the use of allocated sites through:
 - i. an appropriate scale and density of development; and
 - ii. taking opportunities to secure multiple benefits, such as through mixed-use schemes which provide retail, employment, education and community facilities that help reduce the need to travel, and securing net environmental gains (for example by enabling significant new habitat creation or improving public access to the countryside); and

- c. Not reallocate land for its previously identified purpose where there is no reasonable expectation that the use will come forward within the plan period, and consider whether allocation for an alternative use is appropriate instead.
2. Mayors and local planning authorities should take a proactive role in identifying and helping to bring forward land that may be suitable for meeting development needs, including suitable sites on brownfield registers or held in public ownership, using the full range of powers available to them. This should include identifying opportunities to facilitate land assembly, supported where necessary by compulsory purchase powers, where this can help to bring more land forward for meeting development needs and/or secure better development outcomes.
3. The extent to which development plans are making as much use as possible of previously developed land and using minimum densities to accommodate their identified development need will be tested robustly when plans are examined.

National decision-making policies

L2: Making effective use of land

1. Substantial weight should be given to the benefits where a development proposal would achieve one or more of the following:
 - a. Remediating despoiled, degraded, derelict, contaminated or unstable land;
 - b. Making better use of vacant and under-utilised land and buildings (such as by bringing back into residential use empty homes and other suitable buildings; converting space above shops; redeveloping under-utilised retail sites; and building on or above service yards, lock-ups, car parks and other transport infrastructure);
 - c. Making effective use of previously developed land and buildings through temporary uses, in situations where alternative development is anticipated within a reasonable period (including as a result of the land being allocated for an alternative purpose in the development plan);
 - d. Creating additional homes within settlements by using the airspace above existing residential and commercial premises, or through sensitive redevelopment or additional development within existing plots (including, but not limited to, the addition of mansard roofs, proposals to fill gaps in the existing roof line, the introduction of higher buildings at street corners and additional units within residential curtilages). Such proposals should:
 - i. be consistent with the overall street scene, other than where it is appropriate to have larger buildings such as at street corners, or where specific changes are provided for through a design code which forms part of a development plan;
 - ii. maintain safe access and egress for occupiers and users, and acceptable living standards for residents and neighbours in terms of access to daylight, sunlight, privacy and external amenity space; and

- iii. where the development would involve the use of residential curtilages, not occupy more than twice the footprint of the existing building on the site, and retain at least 50% of the non-developed area within the building curtilage⁴³.
2. A condition of simultaneous development should not be imposed on an application for multiple upward extensions unless there is an exceptional justification.
3. Proposals for land which is not previously developed should use development footprints which optimise a site's development potential.

L3: Achieving appropriate densities

1. Development proposals should make efficient use of land, taking into account the identified need for different types of housing and other development, local market conditions, the availability of infrastructure (including sustainable transport options) and its scope for improvement, a site's connectivity and the importance of securing well-designed, attractive and healthy places.
2. Within this context development proposals for residential and mixed-use development within settlements should contribute to an increase in the density of the area in which they are situated. The existing character of an area should be taken into account, in accordance with policy DP3, but should not preclude development which makes the most of an area's potential.
3. Minimum densities for residential development proposals are appropriate in locations which provide high levels of connectivity to jobs and services. Where development proposals for housing or mixed-use schemes are within reasonable walking distance of a railway station⁴⁴, a density of at least 40 dwellings per hectare should be achieved within the net developable area of the site, or 50 dwellings per hectare where the station or stop is defined as 'well-connected'⁴⁵.
4. Development proposals that do not make efficient use of land in accordance with this policy should be refused.

L4: Residential extensions

1. Development proposals to extend existing dwelling houses should:
 - a. Blend effectively with the existing building⁴⁶ and its immediate surroundings in terms of its scale and form; and

⁴³ The existing building is to be assessed as the building as existing on the date of the publication of this Framework.

⁴⁴ For the purpose of this policy references to railway stations also includes stops on underground, tram and other light rail systems.

⁴⁵ Well-connected rail stations and underground, tram and light rail stops are those in a top 60 Travel to Work Area located partially or fully within England by Gross Value Added (GVA) and which, in the normal weekday timetable, are served (or have a reasonable prospect of being served due to planned upgrades or through agreement with the rail operator) throughout the daytime by four trains or trams per hour overall, or two trains or trams per hour in any one direction.

⁴⁶ The existing building is to be assessed as the building as existing on the date of the publication of this Framework.

- b. Maintain acceptable living standards for current and new occupiers in terms of access to daylight, sunlight, privacy and external amenity space.

13. Protecting Green Belt land

The objective of Green Belt policy, as set out in this chapter, is to prevent urban sprawl by keeping land permanently open. The government attaches great importance to Green Belts, the essential features of which are their openness and permanence.

Plan-making policies

GB1: Establishing new Green Belts

1. As the general extent of Green Belt land across the country is already established, new Green Belts should be established only in exceptional circumstances: for example, when planning for larger scale development such as new settlements or major urban extensions. Any proposals to establish new Green Belts in development plans should demonstrate:
 - a. Whether major changes in circumstances exist which make establishing a new Green Belt necessary as an exceptional measure; and
 - b. Why normal planning and development policies would be inadequate for addressing these circumstances; and
 - c. That it would be compatible with long term growth ambitions for the relevant area.

GB2: Assessing existing Green Belt land

1. The preparation of spatial development strategies should be informed by an assessment of the strategic role of Green Belt land within the strategy area. This strategic Green Belt assessment should take into account the five purposes of the Green Belt, which are to:
 - a. Check the unrestricted sprawl of large built-up areas;
 - b. Prevent the merging of neighbouring towns;
 - c. Assist in safeguarding the countryside from encroachment;
 - d. Preserve the setting and special character of historic towns; and
 - e. Assist urban regeneration by encouraging the recycling of derelict and other urban land.
2. The strategic assessment should be used to help develop the spatial development strategy and to identify whether there are areas where Green Belt boundaries may require further consideration through the preparation of local plans.
3. The preparation of local plans should be informed by an assessment, conducted in accordance with the process at Annex E, which identifies grey belt and informs any Green Belt boundary alterations which accord with policy GB3.

GB3: Altering existing Green Belt boundaries

1. Green Belt boundaries should be altered through the preparation and updating of local plans and where:
 - a. This would enable the development of land around stations; or
 - b. Exceptional circumstances are fully evidenced and justified.
2. Exceptional circumstances in this context include a local planning authority being unable to meet its identified need for development in full⁴⁷, having examined all other reasonable options for doing so, including:
 - a. Making as much use as possible of suitable brownfield sites and underutilised land;
 - b. Optimising the density of development in line with policy L3; and
 - c. Assessing whether sufficient suitable sites can be identified outside the Green Belt.
3. If a local planning authority wishes to make an exceptional, limited alteration to the defined Green Belt boundary (which might be to accommodate a site inset within the Green Belt) to meet a specific, identified need for a traveller site, it should be specifically allocated in the development plan as a traveller site only.

GB4: Defining Green Belt boundaries

1. When defining Green Belt boundaries, whether as a result of altering or establishing Green Belts, local plans⁴⁸ should:
 - a. Only include land which it is necessary to keep permanently open as Green Belt;
 - b. Include villages where it is necessary to restrict development because of the important contribution the open character of the village makes to the openness of the Green Belt;
 - c. Use other, more relevant, policy approaches, such as conservation area designation where the character of a village needs to be protected for other reasons;
 - d. Demonstrate that new Green Belt boundaries are broadly consistent with the spatial strategy for accommodating growth and meeting development needs across the plan area and adjoining areas, including those of any relevant spatial development strategies. This includes ensuring that any alterations to Green Belt boundaries promote sustainable patterns of development, including by:
 - i. giving priority to the release of previously developed land within the Green Belt, then to grey belt land which is not previously developed, and then other Green Belt locations, so long as this promotes a sustainable pattern of development overall;

⁴⁷ The extent to which identified needs can be met in full should also take into account the provisions of policy S1.

⁴⁸ Or neighbourhood plans where a need for changes to Green Belt boundaries has been established but not made in local plans, in which case detailed amendments to those boundaries may be made through neighbourhood plans.

- ii. not proposing alterations where there is clear evidence these alterations would fundamentally undermine the purposes (taken together) of the remaining Green Belt when considered across the area of the plan.
- e. Ensure that allocations for major development involving the provision of housing on land released from the Green Belt can meet the Golden Rules, as set out in policy GB8, and that these requirements are set out within the local plan;
- f. Ensure Green Belt boundaries are defined clearly, using physical features that are readily recognisable and likely to be defensible;
- g. Identify areas of safeguarded land, where necessary to meet longer-term development needs well beyond the plan period. It should be made clear that safeguarded land is not allocated for development at the present time (and does not form part of settlements), and that its status will change only when the plan is updated and proposes that the land is released for development.

GB5: Beneficial uses of Green Belt Land

1. Green Belt land should provide benefits for communities and nature, which means that the development plan should, at the most appropriate level, set out:
 - a. Proposals for securing improved public access to greenspace within the Green Belt, including for outdoor sport or recreation, allotments and community food production;
 - b. How the Green Belt can contribute to the priorities for nature recovery set out within relevant Local Nature Recovery Strategies;
 - c. Opportunities to support the objectives of the National Forest, England's Community Forests and Protected Landscapes, where these lie wholly or partly within the Green Belt; and
 - d. How the impact of any proposals to remove land from the Green Belt by altering Green Belt boundaries can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land.

National decision-making policies

GB6: Control of development in the Green Belt

1. Development in the Green Belt is inappropriate unless it falls within one of the categories in policy GB7.
2. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. Such circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness and any other harm resulting from the proposed development, is clearly outweighed by other considerations. In making this assessment, substantial weight should be given to the harm to the Green Belt which would be caused, including harm to its openness.

3. In the case of proposals for renewable and low carbon energy development, very special circumstances may include the wider environmental benefits associated with increased production of energy from renewable sources.

GB7: Development which is not inappropriate in the Green Belt

1. The following categories of development are not inappropriate in the Green Belt, and therefore should not be regarded as harmful to the Green Belt or required to demonstrate very special circumstances:
 - a. Development which is for agriculture, horticulture and forestry;
 - b. The re-use, extension, alteration or replacement of an existing building, provided that:
 - i. the existing building is of permanent and substantial construction; and
 - ii. the extension or alteration will not result in a disproportionate increase in size over and above the size of the original building⁴⁹; or
 - iii. in the case of proposals for a replacement building, it is in the same use and not materially larger than the one it replaces.
 - c. Limited infilling in villages;
 - d. Limited affordable housing for local community needs under policies set out in this Framework or the development plan (for instance, on a rural exception site);
 - e. The redevelopment of previously developed land (including a material change of use to residential or mixed-use including residential), which would not cause substantial harm to the openness of the Green Belt;
 - f. Certain other forms of development provided the impact on the openness of the Green Belt is minimised, and there would not be a significant conflict with the Green Belt purposes. These are:
 - i. mineral extraction;
 - ii. engineering operations;
 - iii. transport, electricity network and water infrastructure required in a Green Belt location;
 - iv. development brought forward under a Community Right to Build Order or Neighbourhood Development Order;
 - v. material changes in the use of land (such as changes of use for outdoor sport or recreation, or for cemeteries and burial grounds); and

⁴⁹ The original building for this purpose is the building that existed on 1 July 1948 or, if constructed after 1 July 1948, as it was built originally.

- vi. the provision of appropriate facilities (in connection with the existing use of land or a change of use), including buildings, for outdoor sport, outdoor recreation, cemeteries and burial grounds and allotments.
- g. Development where all of the following apply:
- i. the development would utilise grey belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan;
 - ii. there is an evidenced unmet need for the type of development proposed⁵⁰;
 - iii. the development would be in a sustainable location, with particular reference to policy TR3 of this Framework⁵¹; and
 - iv. In the case of major development involving the provision of housing, the development proposed complies with policy GB8;
- h. Development for housing and mixed-use development which would:
- i. be within reasonable walking distance of a railway station capable of providing a high level of connectivity to services and employment⁵²;
 - ii. be physically well-related to a railway station or a settlement within which the station is located;
 - iii. be of a scale which can be accommodated taking into account the existing or proposed availability of infrastructure;
 - iv. not prejudice any proposals for long-term comprehensive development in the same location;
 - v. in the case of major development, comply with policy GB8.

GB8: The Golden Rules

1. Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, all of the following contributions ('Golden Rules')

⁵⁰ Which, in the case of applications involving the provision of housing, means the lack of a five year supply of deliverable housing sites, including the relevant buffer where applicable, or where the Housing Delivery Tests was below 75% of the housing requirement over the previous three years; and in the case of traveller sites means the lack of a five year supply of deliverable traveller sites.

⁵¹ In the case of development proposals involving the provision of traveller sites, particular reference should be made to policy HO12.

⁵² Well-connected rail stations and underground, tram and light rail stops are those in a top 60 Travel to Work Area located partially or fully within England by Gross Value Added (GVA) and which, in the normal weekday timetable, are served (or have a reasonable prospect of being served due to planned upgrades or through agreement with the rail operator) throughout the daytime by four trains or trams per hour overall, or two trains per hour in any one direction.

should be made⁵³:

- a. Affordable housing which reflects either:
 - i. development plan policy requirements for major development on land within or released from the Green Belt (as established under policy HO5(1)(a)(iii)); or
 - ii. until such policies are in place, a contribution which is 15 percentage points above the highest existing affordable housing requirement which would otherwise apply to the development, subject to a cap of a 50%⁵⁴. In the absence of a pre-existing requirement for affordable housing, a 50% affordable housing contribution should apply by default.
 - b. Necessary improvements to local or national infrastructure; and
 - c. The provision of new green space, or improvements to existing green space, which is accessible to the public. New residents should be able to access good quality green spaces within a short walk of their homes, whether through on-site provision or through access to offsite spaces. This provision should:
 - i. make a positive contribution to the landscape setting of the development;
 - ii. support nature recovery; and
 - iii. meet local standards for green space provision where these exist in the development plan. Where no locally-specific standards exist, development proposals should meet national standards relevant to the development (these include Natural England standards on accessible green space and urban greening factor and Green Flag criteria). Where land has been identified as having potential for habitat creation or nature recovery within Local Nature Recovery Strategies, proposals should contribute towards these outcomes.
2. Where major development involving the provision of housing on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, complies with the Golden Rules, this should be given substantial weight in considering whether to grant planning permission.
 3. There are only three circumstances in which a site-specific viability assessment may be justified to allow the contributions expected by this policy to be adjusted, which are where a development proposal is:
 - a. On previously developed land;
 - b. For a multi-phase, strategic site; or

⁵³ The Golden Rules do not apply to: (a) developments brought forward on land released from the Green Belt through plans adopted prior to 12 December 2024; (b) developments that were granted planning permission on Green Belt land prior to 12 December 2024; or (c) Traveller sites.

⁵⁴ The 50% cap does not apply to rural exception sites or community-led development exception sites, or if the local planning authority has a relevant existing policy which would apply to the development which is above 50%.

- c. For a development model which is of a wholly different type to that assumed in the viability assessment that informed the development plan.
4. Where the circumstances in paragraph 3 of this policy apply, development should still make the maximum possible contribution to affordable housing and other infrastructure requirements.

14. Achieving well-designed places

The objective of the policies in this chapter is to promote well-designed, healthy, inclusive and sustainable places, through setting clear expectations about design outcomes and the use of relevant tools and processes.

Plan-making policies

DP1: A strategy for design

1. Development plans should, at the most appropriate level, set out clear design expectations by:
 - a. Ensuring the vision for the plan reflects the desired design and placemaking outcomes. This should be informed by an evaluation of the area's existing characteristics and potential;
 - b. Identifying where design guides, design codes and masterplans are necessary to deliver design and placemaking outcomes, such as for significant site allocations and areas of change (e.g. town centres, regeneration areas and suburban areas where there is scope for intensification);
 - c. Setting out locally-specific design policies or standards which are necessary to add further detail to the principles in policy DP3, in response to particular local issues which will benefit from clear design expectations; and
 - d. Setting out in what circumstances design review and other design processes will be required, as described in the Design and Placemaking planning practice guidance.

DP2: Local Design Guides, Local Design Codes and Masterplans

1. Where design guides, design codes and masterplans are necessary, these design tools should:
 - a. Reflect a clear understanding of and address the character of the site or area which they cover, the wider context and opportunities to strengthen existing character;
 - b. Be informed by an understanding of the economic, social and environmental context and conditions for implementation, including through effective community engagement so that local aspirations are taken into account;
 - c. Include a level of detail and degree of prescription proportionate to the circumstances and scale of change proposed; and
 - d. Be supported by monitoring and review processes that allow for necessary adjustments in the light of implementation.

National decision-making policies

DP3: Key principles for well-designed places

1. To respond to their context and create well-designed places development proposals should⁵⁵:
 - a. Context: respond to the history, character and features of the site and its setting, so that it integrates into and enhances its surroundings (such as through the arrangement of development plots and buildings, the use of materials and architectural features, and the restoration, reuse and integration of heritage assets). This should not preclude innovation and change where appropriate, especially where an increased scale or density of development is justified in accordance with policies L2 and L3;
 - b. Liveability: support healthy, mixed, vibrant and integrated communities, which will function well over the lifetime of the development, by incorporating a range of uses and tenures, employing features which promote social interaction, and which are robust, durable and easy to look after;
 - c. Climate: contribute to climate change mitigation and adaptation and the transition to net zero, by using building layouts, building orientation, massing, landscaping and materials which conserve energy and other resources, and which minimise risks from the impacts of climate change including overheating;
 - d. Nature: incorporate and/or connect to a network of high quality, accessible, multi-functional green infrastructure to provide opportunities for recreation and healthy living, strengthen habitats, improve climate resilience and improve air and water quality. This should include maintaining and enhancing tree cover and incorporating sustainable drainage systems in accordance with policies NE3 and F8;
 - e. Movement: provide transport infrastructure and choices which support the design vision for the site, provide good connections to the wider settlement (or those nearby), and prioritise walking, wheeling, cycling and public transport;
 - f. Built Form: use the pattern of buildings to define the arrangement of streets, squares and other spaces, promote compact forms of development to optimise the site's potential, distinguish between public and private areas, create focal points and, where appropriate, enhance views into and out of the scheme;
 - g. Public Space: include spaces that are safe, secure, inclusive, accessible for all ages and abilities and which facilitate and encourage social interaction, play and healthy lifestyles (for example by providing high quality, clear and legible pedestrian and cycle routes, a variety of recreational spaces and places to meet, and making building entrances and windows face onto streets and other public spaces to provide natural surveillance); and
 - h. Identity: create visually attractive, distinctive and characterful development to establish or maintain a strong sense of place and pride, including through the use of a coherent

⁵⁵ Principles for creating well-designed places are described more fully in Part 1 of the Design and Placemaking planning practice guidance, points b to f in this policy forming the seven features of well-designed places described in the guidance, all of which are informed by context (point a).

palette of materials, design features and planting.

2. Development proposals that are not well designed should be refused, when assessed against this policy and local design policies, guides, codes and masterplans set out in the development plan. Substantial weight should be given to compliance with these policies when assessing the design quality of proposals.
3. The principles set out in the Design and Placemaking planning practice guidance should be used to inform how this policy is applied in the absence of locally-produced design policies, guides, codes or masterplans.
4. Substantial weight should also be given to outstanding or innovative designs which promote high levels of sustainability, or which help raise the standard of design more generally in an area, so long as they are consistent with the overall form and layout of their surroundings.

DP4: The Design process

1. Design quality should be considered throughout the evolution, assessment and delivery of development proposals, including through any pre-application engagement; as outlined in Part 2 of the Design and Placemaking planning practice guidance.
2. The local planning authority should:
 - a. Ensure that they have access to, and encourage the appropriate use of design review and other design tools and processes (especially for significant projects such as major housing and mixed-use developments), and take into account their outcomes, including any design recommendations made by design review panels;
 - b. Make sure that relevant planning conditions refer to clear and accurate plans and drawings which provide visual clarity about the design of the development, including the approved use of materials where appropriate; and
 - c. Not allow the quality of approved development to be materially diminished between permission and completion, as a result of changes proposed following its initial approval (for example through changes to approved details).

15. Promoting sustainable transport

The objective of the policies in this chapter is to ensure that transport considerations are taken fully into account in the preparation of development plans and the evolution and assessment of development proposals; using a vision-led approach to embed the role that transport infrastructure and choices can play in creating well-designed, sustainable, inclusive and popular places.

Plan-making policies

TR1: Vision-led approach to planning for transport

1. Sustainable transport should be considered from the earliest stages of plan-making, so that it is reflected in the vision for the plan area and its specific proposals, and forms an integral part of a plan's strategy for creating well-designed, sustainable, inclusive and popular places. This should be done by:
 - a. Making sustainable transport considerations part of early engagement with local communities, highway and transport authorities, transport infrastructure providers, operators, land promoters and neighbouring councils; so that proposals reflect local views, evidence relating to accessibility, capacity and transport service provision, and take account of opportunities for prioritising and maximising sustainable movement across the area. Plans should align land use policies and allocations with wider strategies (such as Local Transport Plans, Local Cycling and Walking Infrastructure Plans and Rights of Way Improvement Plans) and investments in transport to ensure that the potential impacts of development on transport networks are understood and addressed;
 - b. Locating proposed development where it can support sustainable patterns of movement and make effective use of existing or proposed transport infrastructure, reflecting the principles in policy TR3. The Connectivity Tool ([Connectivity Tool - GOV.UK](#)) should be used to inform the assessment and selection of sites for development alongside other relevant evidence;
 - c. Supporting an appropriate mix of uses across the plan area, and within larger scale sites, to minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities;
 - d. Identifying and protecting sites and routes which will widen transport choice and are essential to facilitate sustainable development, including networks for walking, wheeling and cycling, and public transport infrastructure;
 - e. Providing for any transport facilities that need to be located in the area, or for their necessary expansion or adaptation, and the infrastructure and wider development required to support them. This includes uses such as ports, airports, lorry parking facilities, freight interchanges, public transport hubs and roadside services. In doing so it should be considered whether such development is likely to be a nationally significant infrastructure project and any relevant national policy statements, and the importance of maintaining a national network of aviation airfields.

2. Spatial development strategies and local plans may set out thresholds for what constitutes a significant amount of movement arising from new development, based on the circumstances of their areas, for the purposes of applying policies TR3 and TR6.

TR2: Local parking standards

1. Development plans should set local parking standards for residential and non-residential development, across the plan area or for specific sites or sub-areas, in a way which aligns with the transport vision for the plan and opportunities to promote sustainable transport.
2. Maximum standards for car parking should be set where they will support efforts to encourage the use of sustainable transport modes, optimise the density of development in well-connected locations, or where they are necessary for managing the local road network.
3. Parking standards should take into account:
 - a. The connectivity of development in different locations by different modes of transport, especially in terms of access to employment and day to day services;
 - b. Opportunities for improvements in walking, wheeling, cycling and public transport;
 - c. Local car ownership levels and travel trends, and opportunities to promote car sharing and other schemes which may reduce vehicle parking requirements;
 - d. Providing sufficient spaces for plug-in vehicles, blue badge holders, pedal and electric cycles and e-scooters, considering likely future demand and the need for associated infrastructure; and
 - e. The appropriateness of setting different standards for the type and mix of development, including to address specific business requirements where commercial standards are being set; and of using ranges where a degree of flexibility is desirable.

National decision-making policies

TR3: Locating development in sustainable locations

1. So that development is located where it can support sustainable patterns of movement, enable good accessibility for different users and make the most of existing and proposed transport infrastructure, development proposals should reflect the following principles, taking into account the vision for the site, the type of development and its location:
 - a. Development proposals which could generate a significant amount of movement, in the context of the area within which they would be situated, should be in locations that are, or can be made sustainable, by limiting the need to travel and offering a genuine choice of transport modes for residents and users, unless the nature of the use makes this impractical;
 - b. Opportunities should be taken to utilise existing or proposed transport infrastructure in optimising the amount or density of development which can be accommodated in different locations, especially where this can support more walking, wheeling, cycling and public transport use;

- c. The environmental impacts of traffic and transport infrastructure should be identified, assessed and taken into account – including taking opportunities to avoid or mitigate any adverse environmental effects, and to secure net environmental gains such as reductions in air pollution;
 - d. In rural areas, opportunities to improve wheeling, cycling and public transport and enhance the connectivity of an area should be taken where they exist and can be supported by the development proposed.
2. The Connectivity Tool ([Connectivity Tool - GOV.UK](#)) should be used alongside other relevant evidence in assessing the connectivity of particular locations proposed for development.

TR4: Street design, access and parking

1. To contribute to creating well-designed places, transport considerations should be integral to the design of development, proposals for which should:
 - a. Give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating easy access to high quality public transport, with layouts and densities which maximise the catchments for bus or other public transport services;
 - b. Incorporate or contribute towards appropriate facilities to support this prioritisation, such as continuous footways and segregated cycle facilities which are adequately lit, sufficient secure and accessible cycle parking, regularly spaced public seating and good quality waiting facilities for public transport;
 - c. Make sure that the arrangement of streets and other routes help to create places that are safe, inclusive and attractive for all users – including through measures to minimise the scope for conflict between pedestrians, cyclists and vehicles, to meet the needs of disabled people, older people and children in relation to all modes of transport, and to avoid unnecessary street clutter;
 - d. Allow for the efficient delivery of goods, and ease of access by service and emergency vehicles, in ways which do not compromise key place-making principles (set out in policy DP3); and
 - e. Provide a suitable number of parking spaces where appropriate, reflecting the location and nature of the development, any locally-set standards in the development plan, and including adequate provision of spaces that allow for the charging of plug-in vehicles in safe, accessible and convenient locations.
2. The principles set out in national design guidance⁵⁶ should be used to inform how this policy is applied.

⁵⁶ [Designing and modifying residential streets: Manual for streets - GOV.UK](#) and the Design & Placemaking planning practice guidance.

TR5: Roadside facilities

1. Development proposals for roadside facilities located outside settlements should:
 - a. Meet an evidenced need to improve the safety and welfare of road users, or to improve access to electric vehicle charging infrastructure or other alternative fuels, if new or significantly expanded facilities are being proposed. This includes the provision of overnight lorry parking facilities to address any local or wider shortages and reduce the risk of parking in locations which lack appropriate facilities or could cause a nuisance; or
 - b. Improve driver welfare and security, support changes in transport technology, or improve environmental impacts (such as through the facility's design, landscaping or measures to support climate change mitigation), where the proposal is to upgrade existing facilities without significant expansion.
2. Development proposals should not result in the loss of existing roadside facilities unless alternative provision with good access to the strategic transport network is likely to be provided in the local area, or it can be shown that the facility is no longer needed or viable.

TR6: Assessing transport impacts

1. Development proposals that are likely to generate significant amounts of movement should be supported by:
 - a. A transport statement or transport assessment (depending on the extent and significance of the transport issues involved), proportionate to the nature and scale of the development, so that the likely impacts of the proposal for transport can be assessed and monitored; and
 - b. A travel plan, indicating how sustainable transport objectives will be delivered, monitored and managed over time.
2. Transport assessments and statements, and travel plans, should reflect the transport vision for the development and how it is intended to be achieved (including, in the case of Travel Plans, identifying fallback options if initial measures do not deliver the expected outcomes).
3. All development proposals should be capable of proceeding without having a severe adverse impact on the transport network (in terms of capacity and congestion, including cumulative impacts), or an unacceptable impact on highway safety, taking into account any mitigation measures proposed as well as any wider network improvements.
4. In assessing potential impacts, all reasonable future scenarios should be considered, taking into account impacts at different times of the day, potential cumulative impacts, multimodal trip generation and the promotion of sustainable modes of travel, and realising the transport vision for the development itself.

TR7: Marine ports, airports and other aviation facilities

1. Development proposals involving the provision, expansion or alteration of port, airport, advanced air mobility and aviation facilities⁵⁷ (and development ancillary to them) should:
 - a. Facilitate the modernisation, diversification and improvement of facilities, including through innovation in the handling of goods and passengers, and the transition to the use of low and zero carbon fuels; or
 - b. Meet a freight and logistics need in accordance with policy E3; or
 - c. Help to maintain a national network of aviation airfields, and support an airfield's economic or public service role (for example in serving business, leisure, training and emergency service needs); and, in all cases:
 - d. Have an acceptable environmental effect in terms of noise, air quality, carbon emissions, the transport network, landscape, visual and marine impacts.

TR8: Public rights of way

1. Development proposals should:
 - a. Maintain the network of public rights of way, including through suitable diversions agreed with the highway authority; and
 - b. Take opportunities to extend, link or improve the quality of existing routes where this enables one or more of the following:
 - i. improved access to green spaces and the countryside;
 - ii. new direct and circular routes and connections between local and long-distance footpaths, bridleways and cycle routes;
 - iii. the provision of accessible, safe and convenient links to services and facilities; and
 - iv. improved connections with public transport stops and interchanges.

⁵⁷ Including new technologies, for example droneports and autonomous vehicles.

16. Promoting healthy communities

The objective of the policies in this chapter is to promote the creation of healthy and inclusive places and support the provision of appropriate public services, by enabling development which can support this aim and seeking to retain, improve and deliver new facilities which are important for community wellbeing and minimising inequalities.

Plan-making policies

HC1: Planning for healthy communities

1. To promote the creation of healthy and inclusive places, and the provision, retention and enhancement of appropriate community facilities and public service infrastructure, development plans should, at the most appropriate level:
 - a. Be informed, through engagement with relevant service providers, by an understanding of any existing deficits in the availability of community facilities and public service infrastructure, and additional requirements expected over the plan period, arising from proposed development and wider changes in the local population and public service provision. In doing so, they should take into account both quantitative and qualitative aspects of provision, identified local health needs and opportunities to reduce inequalities through the availability of facilities;
 - b. Set out the facilities and contributions expected from development, including as part of allocations for major housing and mixed-use sites;
 - c. Allocate land specifically for community facilities and public service infrastructure where it is appropriate to do so, and assess whether any land is suitable to designate as Local Green Space in accordance with policy HC2;
 - d. Set local standards for the provision of different types of outdoor recreational land, including for play, sport, informal recreation and allotments. In doing so they should draw upon relevant national standards and best practice, tailoring these as necessary to local circumstances and evidence⁵⁸. Policies for play and informal recreation should aim to secure a connected network of high quality, inclusive and accessible opportunities as part of the wider network of green space provision, secured through both on-site provision in conjunction with land allocated for development and through other contributions and investment; and
 - e. Identify wider opportunities to promote good health, prevent ill-health and support social interaction through their spatial strategy and land allocations, including through policies for strengthening town centres, locating development where it will support walking and cycling and promoting mixed-use developments.
2. In planning for community facilities and public service infrastructure, authorities should engage proactively with local communities and service providers, taking into account

⁵⁸ These include the suite of Green Infrastructure Standards for England published by Natural England, the standards for open space, outdoor sport and play recommended by Fields in Trust (<https://fieldsintrust.org/insights/standards>) and published Sport England Guidance (including [Assessing Needs and Playing Pitch Strategy guidance | Sport England](#)).

relevant strategies to improve health, address inequalities and foster social and cultural well-being for all sections of the community. They should attach considerable importance to providing for sufficient education facilities (including early years, school and post-16 provision), health care provision and other essential community facilities and public service infrastructure over the plan period, in a way that aligns with the needs of the local population and any wider requirements for improvements in public service infrastructure identified by the government or public agencies (recognising that some public service infrastructure serves a larger than local population).

HC2: Local Green Space

1. Local and neighbourhood plans may designate land as Local Green Space where this would safeguard green areas of particular value to the local community. Local Green Space should be limited to situations where the land concerned is:
 - a. In close proximity to the community it serves;
 - b. Demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife; and
 - c. Local in character and not an extensive tract of land.
2. Designating land as Local Green Space should be consistent with the local planning of sustainable development and the provision of sufficient land for homes, jobs and other needs. Local Green Space should only be designated when a plan is prepared or updated, and should be capable of enduring beyond the end of the plan period.

National decision-making policies

HC3: Community facilities and public service infrastructure serving new development

1. Proposals for housing, employment or other development which would give rise to significant numbers of additional people living in, working in or visiting an area should:
 - a. Be informed by an understanding of the need for any associated improvements to community facilities and public service infrastructure, whether on or off-site; and
 - b. Provide for community facilities and improvements to public service infrastructure which are necessary for the development to be acceptable in planning terms, whether by direct provision or a contribution to off-site improvements (which may be through Community Infrastructure Levy payments, where applicable).
2. Where the development plan does not set out locally-specific standards for green space provision, all development proposals should use relevant national standards and best practice⁵⁹ to identify improvements in the quantity and quality of provision which should be provided or contributed towards, as appropriate to the nature of the development and

⁵⁹ These include the suite of Green Infrastructure Standards for England published by Natural England, the standards for open space, outdoor sport and play recommended by Fields in Trust (<https://fieldsintrust.org/insights/standards>) and published Sport England Guidance (including [Assessing Needs and Playing Pitch Strategy guidance | Sport England](#)).

taking into account existing levels of provision in the area.

3. Planning conditions and obligations should be used to secure the timely delivery of community facilities and public service infrastructure required to serve new development, so that these facilities are available for use when the development (or an agreed proportion of the development) is first occupied or comes into use.

HC4: Proposals for new and improved community facilities and public service infrastructure

1. Substantial weight should be given to the benefits of providing new or improved public service infrastructure or community facilities.
2. Local planning authorities, developers and public service providers should collaborate in a positive and proactive manner to identify and resolve key planning issues before applications for community facilities and public services infrastructure are submitted. Where appropriate, they should also engage with local communities in the design of proposals, including with children and families where new or improved facilities for play are involved, so that developments can reflect user needs and be inclusive.

HC5: Hot food takeaways and fast food outlets

1. Development proposals for hot food takeaways or fast-food outlets should be refused:
 - a. Within reasonable walking distance of schools and other places where children and young people congregate, unless the location is within a designated town centre; or
 - b. In locations where there is evidence that a concentration of such uses is having an adverse impact on local health, pollution or anti-social-behaviour.

HC6: Retention of key community facilities and public service infrastructure

1. Development proposals should not result in the loss of key community facilities and public service infrastructure serving a local area unless:
 - a. It can be demonstrated that there is no reasonable prospect of the facility being retained, due to there being insufficient community support for the service it provides, or it no longer being viable (in the case of shops and public houses where viability is an issue, evidence should be provided that reasonable steps have been taken to market the property for its existing use without success, for a period of at least twelve months); or
 - b. The loss resulting from the proposed development would be replaced by equivalent or better provision, in a location which offers comparable or improved accessibility for the community it serves.
2. For the purpose of this policy, key community facilities and public service infrastructure means established services that are used on a frequent basis in a local area such as local shops, public houses, places of worship, local health facilities and community halls. The policy applies only where the facility would be the last of its type in the area concerned.

HC7: Development affecting existing recreation facilities

1. Development proposals should not result in the loss of existing open space, sports and recreational buildings and land, including playing fields, other formal and informal play space and allotments, unless:
 - a. An assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or
 - b. The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and/or quality, in a location which offers comparable or improved accessibility for the community it serves; or
 - c. The development is for alternative sports, play or other recreational provision, the benefits of which clearly outweigh the loss of the current or former use.

HC8: Development affecting Local Green Space

1. Development proposals for land which has been designated as Local Green Space should be determined in a manner consistent with the relevant national decision-making policies for land in the Green Belt, excluding provisions relating to grey belt and previously developed land.

17. Pollution, public protection and security

The objective of the policies in this chapter is to ensure that new development is appropriate for its location taking into account risks posed by pollution and other hazards; that any impacts which development might have are taken into account; and that sufficient provision is made for development required for public safety and security.

Plan-making policies

P1: Planning for clean and safe places

1. To support efforts to avoid and mitigate risks from natural and man-made hazards, minimise levels of pollution and create clean, liveable and safe places for people to live, work and visit, development plans should:
 - a. Identify areas where ground conditions may inhibit or affect the development which can take place;
 - b. Allocate land for development where:
 - i. opportunities can be taken to improve local environmental conditions, such as by remediating despoiled, degraded, derelict, contaminated and unstable land;
 - ii. occupiers and users of the development will not be put at risk from, or be adversely affected by, unacceptable levels of pollution;
 - iii. development proposals will not themselves cause unacceptable levels of pollution, either alone or in combination with other developments, taking into account communities which may be particularly vulnerable to its effects, such as children and older people; and
 - iv. the intended uses will not place unreasonable restrictions on the operation of existing businesses, community facilities, public services, defence and security activities.
 - c. Consider any wider opportunities to reduce air, water, soil and noise pollution, and contribute to compliance with national and local environmental targets and objectives, through the spatial strategy and policies for specific parts of the plan area (such as by identifying opportunities for strategic nature-based solutions);
 - d. Identify whether restrictions on certain types or forms of development are necessary as a consequence of consultation zones around hazardous substances sites, safeguarding areas around aerodromes, technical sites or military explosives storage

areas⁶⁰, and consultation zones around nuclear sites⁶¹ (and reflect the implications of these areas in any allocations of land within the plan);

- e. Identify other locations where natural or man-made hazards may influence the way in which land is allocated or developed. This includes (but is not limited to) town centres and other locations where large numbers of people are expected to congregate⁶², and coastal change management areas (policy F3); and
- f. Assess whether land needs to be allocated for development which is required to maintain public safety and security, including for the purposes of flood management in accordance with policy F2(1)(b) and national defence.

National decision-making policies

P2: Ground Conditions

1. Sites proposed for development should be suitable for their proposed use taking account of:
 - a. Ground conditions and any risks arising from land instability or contamination (whether due to natural hazards or current and former activities such as mining or fuel storage); and
 - b. The extent to which any such risks can be mitigated, and the potential impacts on the natural environment arising from remediation.
2. Where land is remediated it should, as a minimum, not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990.
3. Adequate site investigation information, prepared by a competent person, should be available to inform these assessments.
4. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.

P3: Living conditions and pollution

1. Development proposals should:
 - a. Be appropriate for their location taking into account the likely effects (including cumulative effects) of pollution on health, living conditions and the natural environment, as well as the potential sensitivity of the site or the wider area to impacts which could arise from the development;
 - b. Provide healthy living conditions for occupiers and users in terms of having adequate

⁶⁰ As identified through the town and country planning (safeguarded aerodromes, technical sites and military explosives storage areas) direction 2002.

⁶¹ Including the existing Detailed Emergency Planning Zones and Outline Planning Zones, as set out in the Office for Nuclear Regulation's guidance on Land Use Planning: [Land use planning | Office for Nuclear Regulation](#)

⁶² The considerations in policy P5(1)(d) are relevant in this context.

access to light and avoiding exposure to levels of air, noise, artificial light or other sources of pollution which could have an unacceptable adverse effect on health and wellbeing; and

- c. Not give rise to, or contribute to, an unacceptable level of access to daylight and sunlight for neighbouring residents and occupiers, or unacceptable levels of air, noise, artificial light, water, soil or other forms of pollution on or beyond the site.

2. Within this context development proposals should:

- a. Mitigate the effect of existing pollution on the site where necessary to secure acceptable conditions for occupiers and users and, where possible, take opportunities to reduce pollution affecting the wider area (such as through traffic and travel management or improved external lighting). In doing so consideration should be given to the cumulative effect of pollution from multiple sources, and to whether the intended occupiers or users may be particularly vulnerable to its effects, such as children and older people;
- b. Sustain and contribute to compliance with relevant limit values or national objectives and targets for air pollutants including PM2.5, taking into account the presence of Air Quality Management Areas and NO2 Clean Air Plans. Where a development proposal falls within or could affect an Air Quality Management Area or Clean Air Plan (Including any Clean Air Zone), it should be consistent with the objectives of these plans and the local air quality action plan;
- c. Not result in levels of noise exposure which would have a significant observed adverse effect, and maintain the character of tranquil areas (those that have remained relatively undisturbed by noise from human sources and are prized for their recreational and amenity value for this reason);
- d. Limit any adverse impact from artificial light on local amenity, intrinsically dark landscapes (those entirely, or largely, uninterrupted by artificial light) and nature; and
- e. Assess and mitigate impacts where the development could have an unacceptable adverse effect on water quality, especially where this concerns sensitive water bodies such as chalk streams.

3. In applying this policy, it should not be assumed that other regimes for the control of pollution will necessarily eliminate emissions completely.

P4: Impact of development on existing activities

1. Existing businesses, community facilities, public services and defence and security activities should not have unreasonable restrictions placed on their current or permitted operation as a result of development being approved after they were established. This means that development proposals should be capable of being integrated effectively with existing business, community and public service activities and infrastructure in their vicinity (including, but not limited to, uses such as pubs, music venues, places of worship, sports clubs, blue light services, defence, electricity network infrastructure and industrial and waste sites).
2. Where the operation of an existing activity could have a significant adverse effect on a

proposed new development in its vicinity, development proposals should:

- a. Identify the nature of the potential impacts, informed where necessary by early discussions between the applicant (i.e. the 'agent of change') and those existing uses which could be affected by the proposal to inform the scope for mitigation; and
 - b. Be able to demonstrate that suitable mitigation can be provided before the development has begun to be occupied, if the development is to be acceptable. Planning conditions or obligations should be used to secure agreed mitigation measures.
4. This applies to new development involving changes of use of land and property, as well as new construction, and includes situations where new development may interfere with the operation of electronic communications networks. Both current and permitted levels of operation of existing activities should be taken into account when applying this policy.

P5: Maintaining public safety and security

1. Development proposals should anticipate and address possible malicious threats and other hazards (whether natural or man-made) in relation to:
 - a. Occupiers and users, by identifying potential safety risks and proportionate mitigation opportunities which can be addressed through the design of the scheme. This applies especially in relation to children and other vulnerable groups (such as in proximity to open water and transport infrastructure), and in addressing crime, or the fear of crime;
 - b. Uses which could pose a potential hazard to the surrounding area. Development proposals for new major hazard sites, changes to existing major hazard sites and new development in the vicinity of major hazard sites and major accident hazard pipelines (as identified within Health and Safety Executive consultation zones) should proceed only if it can be demonstrated that the development would not increase the risk of a major accident;
 - c. Consultation zones around major accident hazard sites, major accident hazard pipelines and Health and Safety Executive licensed explosives sites, safeguarded areas around civilian aerodromes or technical sites⁶³ and Outline Planning Zones or Detailed Emergency Planning Zones around nuclear sites. Development proposals within these areas should only be supported where, having consulted the relevant consultation bodies⁶⁴, it is clear that the development will be safe for occupiers and users and will not impose constraints on the operation of the facility or facilities to which the safeguarded area or consultation zone relates; and
 - d. Locations where large numbers of people are expected to congregate, such as transport hubs, night-time economy venues, cinemas and theatres, sports stadiums and arenas, shopping centres, health and education establishments, places of worship, hotels and restaurants, visitor attractions and commercial centres. Proposals for major development in such locations should be informed by the most up-to-date

⁶³ In consultation with the Civil Aviation Authority.

⁶⁴ The Control of Major Accident Hazards (COMAH) competent authority for zones around hazardous installations, the Civil Aviation Authority or Secretary of State for Defence for safeguarding areas around aerodromes, technical sites or military explosive storage areas, and the Office for Nuclear Regulation, Secretary of State for Defence or Health and Safety Executive for zones around nuclear sites.

information available from the police and other relevant agencies about the nature of potential threats and their implications, and appropriate and proportionate steps that can be taken to reduce vulnerability, increase resilience and ensure public safety and security.

P6: Land and operations for defence and public protection

1. Substantial weight should be attached to the importance of sites, activities, facilities and infrastructure required to maintain and enhance defence capability and public safety, when considering:
 - a. Proposals for their development (whether through modernisation, intensification, redevelopment or expansion for operational and related purposes); and
 - b. Proposals which could affect their operational activity and capability, especially where noise from that activity could affect the proposed development (policy P4 should also be applied in all such cases).

18. Managing flood risk and coastal change

The objective of the policies in this chapter is to minimise risks to development arising from all sources of flooding and coastal change, taking into account the impacts of climate change, by steering development away from areas of risk, ensuring that development will be safe for its lifetime without increasing flood risk elsewhere, and incorporating sustainable drainage systems where appropriate.

Plan-making policies

F1: Assessing flood risk for plan-making

1. In order to manage development in ways which minimise the risk of flooding to people and property, development plans should:
 - a. Be informed by an up-to-date strategic flood risk assessment which considers current and future flood risk from all sources, including cumulative impacts in, or affecting, areas susceptible to flooding; and
 - b. Take account of advice from the Environment Agency and other relevant flood risk management authorities, such as lead local flood authorities and internal drainage boards, about levels of risk, options for mitigation, and the implications for development in the plan area.

F2: Planning for effective flood risk management

1. Development plans should take a risk-based approach when identifying suitable locations for development, taking into account all sources of flood risk and the current and future impacts of climate change. They should do this, and manage any residual risk, by:
 - a. Applying the sequential test in policy F5 and, where relevant, policy F6 below;
 - b. Safeguarding land that is, or is likely to be, required for current or future flood management;
 - c. Using opportunities provided by new development and improvements in green and other infrastructure to reduce the causes and impacts of flooding (making as much use as possible of natural flood management techniques as part of an integrated approach to flood risk management); and
 - d. Where climate change is expected to increase flood risk so that some existing development may not be sustainable in the long-term, seeking opportunities to relocate development, including housing, to more sustainable locations.

F3: Managing coastal change

1. Development plans should take into account relevant shoreline management plans, the national coastal erosion risk map, the UK Marine Policy Statement and relevant marine plans in assessing the risks arising from coastal change and appropriate approaches to coastal management. Integrated Coastal Zone Management should be pursued across local authority and land/sea boundaries, to ensure effective alignment of the terrestrial

and marine planning regimes.

2. Inappropriate development in vulnerable coastal areas should be avoided when identifying suitable locations for development, so that risks arising from coastal change are not exacerbated. In order to do this development plans should:
 - a. Identify as a Coastal Change Management Area any area likely to be affected by physical changes to the coast, estuaries or tidal rivers, over the next century;
 - b. Set out what types of development will be appropriate in the Coastal Change Management Area, and in what circumstances, taking into account the safeguards in policy F9 and local conditions;
 - c. Safeguard land that is, or is likely to be, required for current or future coastal erosion risk management, including managed realignment; and
 - d. Reduce risks by making provision for development and infrastructure which needs to be relocated away from Coastal Change Management Areas.

National decision-making policies

F4: Assessing flood risk for decision-making

1. To inform the assessment of flood risk and, where relevant, appropriate mitigation, a site-specific flood risk assessment should accompany all development proposals in Flood Zones 2, 3a, and 3b as defined in Annex F, table 1.
2. In Flood Zone 1, a site-specific flood risk assessment should inform and accompany all development proposals involving:
 - a. Sites of 1 hectare or more;
 - b. Land which has been identified by the Environment Agency as having critical drainage problems;
 - c. Land identified in a strategic flood risk assessment or the Flood Map for Planning⁶⁵ as being at increased flood risk in future; or
 - d. Land subject to a current risk of flooding from any source, where its development would introduce a more vulnerable use than the existing one.
3. Site-specific flood risk assessments should be appropriate to the scale, nature, and location of development and should, where relevant, support an assessment of whether a development proposal satisfies the sequential and exception tests set out in policies F5 and F6.

F5: The sequential test

1. The aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Where the test applies, development proposals should not be

⁶⁵ <https://flood-map-for-planning.service.gov.uk/>

located in areas at risk of flooding where alternative sites, appropriate for the development, are reasonably available in areas with a lower risk of flooding. The area to which the test is applied should not be greater than the anticipated catchment of the development in terms of its likely occupiers or users.

2. The sequential test should be used in areas known to be at risk now or in the future from any form of flooding, other than for:
 - a. Sites allocated in the development plan which were subject to the sequential test during plan preparation;
 - b. Sites where a site-specific flood risk assessment demonstrates clearly that:
 - i. no built development within the site boundary, including access or escape routes, land raising or other potentially vulnerable elements, would be located on an area that would be at risk of flooding from any source, now and in the future (having regard to potential changes in flood risk); or
 - ii. where the site would be at risk of surface water flooding only, the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development without increasing flood risk elsewhere in accordance with policy F7.
 - c. For the following types of development:
 - i. householder development;
 - ii. small non-residential extensions (with a footprint of less than 250m²); and
 - iii. changes of use, other than changes of use to a caravan, camping or chalet site, or to a mobile home or park home site.
3. The strategic flood risk assessment covering the area of the proposed development and the Flood Map for Planning should provide the evidential basis for applying the sequential test.

F6: Development in areas at risk of flooding from rivers or the sea

1. In areas falling within flood zones 2, 3a, or 3b (as defined in Annex F, table 1):
 - a. Development proposals should be refused if the use is incompatible with the risk from river or sea flooding, as set out in Annex F, table 3; and
 - b. In certain other circumstances shown in Annex F, table 3, in addition to satisfying the sequential test in policy F5 where applicable, development will only be appropriate where an 'exception test' is satisfied. The exception test involves demonstrating that the development would meet all the following criteria:
 - i. provide wider sustainability benefits to the community that outweigh the flood risk; and

- ii. be safe for its anticipated lifetime in accordance with policy F7; and
 - iii. not increase flood risk elsewhere and, where possible, reduce flood risk overall.
2. The application of the exception test should be informed by a site-specific flood risk assessment⁶⁶. The exception test does not need to be applied:
- a. To those forms of development, or in those circumstances, where the sequential test is not required, as set out in policy F5; or
 - b. Where development is proposed on a site allocated in the development plan to which the exception test was applied at the plan-making stage, unless there has been a significant increase in the risk of flooding to the site subsequently, or the nature of the development itself has changed significantly from that which was allocated so as to introduce a more vulnerable use (having regard to Annex F, table 2).

F7: Ensuring development is safe from flooding

1. Development proposals should not present a risk from flooding to potential occupiers, users, or visitors, and should not increase flood risk elsewhere.
2. Where development is proposed in a location known to be at risk from any form of flooding, now or in the future, it should be refused unless:
 - a. Within the site, the most vulnerable development is located in areas of lowest flood risk, unless there are overriding reasons which justify a different arrangement;
 - b. The development will be safe throughout its lifetime taking account of the vulnerability of its users;
 - c. Any residual risk can be safely managed, and safe access and escape routes are included where appropriate, as part of an agreed emergency plan;
 - d. The development is appropriately flood resistant and resilient such that, in the event of a flood, it could be quickly brought back into use without significant refurbishment; and
 - e. It can be demonstrated that flood risk will not be increased elsewhere.

F8: Sustainable drainage systems and watercourses

1. Development proposals which could affect drainage on or around the development site should incorporate sustainable drainage systems to control flow rates and reduce volumes of runoff, in ways which are proportionate to the nature and scale of the proposal. The systems employed should provide multifunctional benefits wherever possible, facilitating improvements in water quality, biodiversity and amenity.
2. Sustainable Drainage Systems should:
 - a. Be designed in accordance with the National Standards for Sustainable Drainage

⁶⁶ For the purpose of policy F2, when the exception test is being applied at the plan-making stage, it should be informed instead by an up-to-date strategic flood risk assessment.

Systems⁶⁷;

- b. Have maintenance arrangements in place to ensure an acceptable standard of operation for the anticipated lifetime of the development; and
 - c. In the case of proposals for major development, take account of advice from the Lead Local Flood Authority.
3. Development proposals should not enclose existing watercourses where this is not already the case, unless there are compelling reasons to do so; and should where possible remove existing culverts and re-naturalise existing river channels, unless to do so would increase flood risk or result in other environmental harm.

F9: Development in Coastal Change Management Areas

1. Development should not take place within a Coastal Change Management Area (or within areas shown as vulnerable to erosion on the national coastal erosion risk map, where these are not yet reflected in identified Coastal Change Management Areas) unless it can be demonstrated that it would:
 - a. Be safe over its planned lifetime;
 - b. Reflect the provisions of the relevant Shoreline Management Plan and not have an unacceptable impact on coastal change processes;
 - c. Not have a detrimental impact on the character of the coast, including land designated for its landscape or habitat importance;
 - d. Provide wider sustainability benefits which justify the development; and
 - e. Not hinder the creation and maintenance of a continuous signed and managed route around the coast (as required by the Marine and Coastal Access Act 2009).
2. Where development proposals meet these requirements, time-limited permissions and site-restoration conditions should be used where appropriate. Permanent new residential development (including through changes of use) is inappropriate within a Coastal Change Management Area or other areas shown as vulnerable to erosion on the national coastal erosion risk map.

⁶⁷ [National standards for sustainable drainage systems \(SuDS\) - GOV.UK.](#)

19. Conserving and enhancing the natural environment

The objective of the policies in this chapter is to influence the design and location of new development to help drive nature's recovery and contribute to wider environmental outcomes, safeguarding our most important habitats, species and landscapes and recognising the centrality of natural capital to delivering sustainable growth.

Plan-making policies

N1: Identifying environmental opportunities and safeguards

1. Development plans should safeguard and enhance the natural environment, and reflect the wider benefits from natural capital and ecosystem services, by using Local Nature Recovery Strategies, Protected Landscape Management Plans, River Basin Management Plans, National Forest Strategies, Community Forest Plans and other relevant evidence at the most appropriate level to:
 - a. Set out the hierarchy of international, national and locally designated sites and areas of importance for their landscape, geological (including soil) or biodiversity value in the plan area, and identify other features which require particular consideration in managing development due to their environmental value such as chalk streams;
 - b. Identify opportunities for the conservation, enhancement and recovery of landscapes, sensitive waterbodies, habitats and species of principal importance, including through habitat restoration, the use of nature-based solutions, and the creation and strengthening of ecological networks that are more resilient to current and future pressures (including opportunities which exist at a catchment or landscape scale across plan boundaries);
 - c. Steer the location of development, including through site allocations, in ways which utilise land of least environmental value where that would be consistent with other policies in this Framework. This should include limiting the scale and extent of development within protected landscapes, avoiding the use of higher quality agricultural land where land of poorer quality is available and avoiding and minimising harm to designated sites of importance for nature. Areas which could become of particular importance for nature identified in Local Nature Recovery Strategies should be taken into account as opportunities to integrate development with environmental restoration, but should not necessarily preclude the allocation of land for development; and
 - d. Set out standards for green infrastructure provision, in a way which complements and/or incorporates those for recreational land (as set out in policy HC1)⁶⁸.
2. Development plans should only set local standards for biodiversity net gain which are in excess of the statutory net gain requirement where this is for specific site allocations, and is fully justified and deliverable. Any such requirements should not extend to categories of

⁶⁸ These should draw upon Natural England's Green Infrastructure Standards for England, tailored as necessary to local circumstances.

development which are exempt from statutory biodiversity net gain.

National decision-making policies

N2: Improving the natural environment

1. To contribute positively to the natural environment and support nature's recovery development proposals should:
 - a. Consider the environmental qualities of land proposed for development, including habitats, landscape character and the natural beauty of the countryside, and identify opportunities for those qualities to be conserved or enhanced (including through requirements for biodiversity net gain where these apply⁶⁹);
 - b. Use areas of poorer quality agricultural land in preference to that of higher quality, where significant development of agricultural land is demonstrated to be necessary (taking into consideration land which is classified as best and most versatile agricultural land, and its grade);
 - c. Take suitable opportunities to connect to and strengthen ecological networks that extend beyond the site, drawing on the measures proposed by Local Nature Recovery Strategies, National Forest Strategies and Community Forest Plans, where present, and other relevant assessments;
 - d. Conserve and enhance existing natural features of visual, historic or nature conservation value (such as established trees and hedgerows) wherever possible; and use appropriate landscaping to help create a well-designed place and integrate the development into its surroundings;
 - e. Use green infrastructure provided as part of the scheme and nature-based solutions to secure multiple benefits: such as for biodiversity; surface water and pollution management (including maintaining flow rates and water quality); climate change mitigation and adaptation, and recreation;
 - f. Minimise impacts on biodiversity and include features for species which support priority or threatened species such as swifts, bats and hedgehogs. Development proposals should incorporate integrated nest boxes (commonly known as swift bricks) into their construction unless there are compelling technical reasons which prevent their use, or would make them ineffective; and
 - g. Make sure that green infrastructure and other features to support nature are located and designed to minimise risk of future failure, and that appropriate measures are in place for any necessary long-term management.
2. If significant harm to biodiversity resulting from a development cannot be avoided (through locating on an alternative site with less harmful impacts), adequately mitigated or, as a last resort, compensated for, then the development should be refused.

⁶⁹Although development proposals may incorporate biodiversity enhancements which exceed the statutory objective for biodiversity net gain, this should only be a requirement where it is set out in up-to-date development plan policies for specific site allocations. Decision makers should not give weight to other development plan policies which require biodiversity gains which go beyond the statutory framework, including for development proposals which are exempt.

N3: Trees in new development

1. In recognition of the benefits which trees can provide for biodiversity, climate change mitigation and adaptation, and the character and quality of the built environment, development proposals should:
 - a. Make new streets tree-lined (unless there are strong reasons why this would be inappropriate in specific streets), and incorporate trees in other suitable locations, such as in parks and through the provision of community orchards;
 - b. Make sure that the selection of species and their placement is compatible with highways and other infrastructure requirements and the needs of different users of public spaces; and will be effective in helping to adapt to the effects of climate change and delivering other environmental benefits. Suitable arboricultural advice should be sought, and proposals discussed with highways and trees officers where necessary, so that the right trees are planted in the right places; and
 - c. Make provision for the long-term maintenance of both existing and newly-planted trees which form part of the development.

N4: Protected Landscapes

1. Development proposals within Protected Landscapes should be limited in scale and extent and sensitively located and designed to avoid harm to their statutory purposes and special qualities. Substantial weight should be placed on the importance of conserving and enhancing the natural beauty of these areas, and to conserving and enhancing wildlife and cultural heritage in National Parks and the Broads.
2. Proposals for major development within protected landscapes should only be supported in exceptional circumstances⁷⁰ where it can be demonstrated that the development is in the public interest. To inform a decision about whether exceptional circumstances exist, consideration of such proposals should include an assessment of:
 - a. The need for the development, including in terms of any national considerations such as maintaining a sufficient supply of minerals, and the impact of permitting it, or refusing it, upon the local economy;
 - b. The cost of, and scope for, developing outside the designated area, or meeting the need for the development in some other way; and
 - c. Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which it could be moderated.
3. Where, exceptionally, proposals for major development are approved within protected landscapes, steps should be taken to mitigate potential adverse impacts on their special qualities and statutory purposes⁷¹, including on features such as tranquillity and dark skies.

⁷⁰ For the purpose of this policy and policy N5 only, whether a proposal is 'major development' is a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the statutory purposes for which the area has been designated or defined.

⁷¹ Where significant harm cannot be mitigated, it may be appropriate to consider whether suitable compensation would be acceptable.

4. Development proposals within the setting of protected landscapes should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas.

N5: Maintaining the character of the coast

1. Development proposals should maintain the character of undeveloped areas of coast, while improving public access to it where appropriate.
2. Development proposals in areas defined as Heritage Coast (and that do not already fall within a protected landscape), should be consistent with the special character of the area and the importance of its conservation. Major development within a Heritage Coast should not be supported, unless it is compatible with its special character.
3. If located within a Coastal Change Management Area, development proposals should also be considered against policy F9.

N6: Areas of particular importance for biodiversity

1. To support the conservation of important habitats, development proposals affecting:
 - a. A site of international importance, which for the purpose of this policy is a habitats site, should be refused unless:
 - i. an appropriate assessment has concluded that the proposal will not adversely affect the integrity of the site (either individually or in combination with other developments), or that there are imperative reasons of overriding public importance; and/or
 - ii. the impact of development on the relevant protected feature of the protected site is being addressed through an Environmental Delivery Plan which has been made and the developer has committed to paying the nature restoration levy.
 - b. A site of national importance, which for the purpose of this policy is one designated as a Site of Special Scientific Interest, should only be supported if:
 - i. there would be no adverse effect (either individually or in combination with other developments) on the features of special scientific interest of the SSSI; or
 - ii. the benefits of the development in the location proposed clearly outweigh both the likely impact on the features of special scientific interest, and any broader impact on the national network of Sites of Special Scientific Interest; or
 - iii. the impact of development on the relevant protected feature of the protected site is being addressed through an Environmental Delivery Plan which has been made and the developer has committed to paying the nature restoration levy.
 - c. A site of local importance, which for the purpose of this policy is one designated as a Local Nature Reserve or identified as a local wildlife site, local geological site or equivalent in the development plan, should only be supported if:

- i. there would not be a significant adverse effect on the integrity of the site; or
 - ii. the benefits of development in the location proposed clearly outweigh the likely impact on the features which make the site valuable for nature conservation.
2. Irrespective of a site's status in nature conservation terms, development proposals which would entail the loss or deterioration of irreplaceable habitats (such as ancient woodlands and ancient and veteran trees) should be refused, unless there are wholly exceptional reasons⁷² and a suitable compensation strategy exists.

⁷² For example, infrastructure projects (including nationally significant infrastructure projects, orders under the Transport and Works Act and hybrid bills), where the public benefit would clearly outweigh the loss or deterioration of habitats.

20. Conserving and enhancing the historic environment

The objective of the policies in this chapter is to conserve and enhance the historic environment. Heritage assets are an irreplaceable resource, and range from sites and buildings of local historic value to those of the highest significance, such as World Heritage Sites which are internationally recognised to be of Outstanding Universal Value. These assets should be conserved in a manner appropriate to their significance, so that they can be enjoyed for their contribution to the quality of life of existing and future generations⁷³.

Plan-making policies

HE1: Planning for the historic environment

1. To support the conservation, enhancement and enjoyment of the historic environment, development plans should, at the most appropriate level:
 - a. Identify the main heritage features within the plan area, including those heritage assets at most risk through neglect, decay or other threats, set out the key issues facing them and create a positive strategy for their conservation and enhancement, including where these assets can be used to support sustainable growth;
 - b. Be informed by a proportionate heritage assessment and should consider the wider social, cultural, economic and environmental benefits that conservation of the historic environment can bring;
 - c. Take opportunities, for example through design codes and masterplans, to draw on the contribution which the historic environment can make to the character and quality of development;
 - d. Be supported by a local list to identify non-designated heritage assets that are important to the local community.

HE2: Conservation Areas and World Heritage Sites

1. To conserve and enhance the significance of conservation areas and World Heritage Sites, development plans should:
 - a. Identify opportunities for new development affecting these assets to enhance or better reveal their significance, alongside any measures needed to safeguard their importance and long term future; and reflect these in policies for site allocations and/or accompanying design guides, design codes or masterplans; and
 - b. Include any locally-specific policies needed to preserve and enhance the significance and Outstanding Universal Value of World Heritage Sites and their settings (including any contribution made by their setting and any buffer zone). Those policies should

⁷³ The policies set out in this chapter also relate, as applicable, to the heritage-related consent regimes for which local planning authorities are responsible under the Planning (Listed Buildings and Conservation Areas) Act 1990.

encourage sustainable use and take into account relevant policies and objectives in World Heritage Site management plans.

2. Conservation areas should be reviewed periodically, and new or amended designations should be accompanied by an adopted appraisal and management plan. These documents should be aligned with the policies in the development plan. When considering a new or amended conservation area designation, local planning authorities should ensure that an area justifies such status because of its special architectural or historic interest, and that the concept of conservation is not devalued through the designation of areas that lack special interest.

HE3: Historic Environment Records

1. To support effective plan-making and decision making, local planning authorities should maintain or have access to a historic environment record. This should contain up-to-date evidence about the historic environment in their area and be used to:
 - a. Assess the significance of heritage assets and the contribution they make to their environment and inform the preparation of local lists; and
 - b. Predict the likelihood that currently unidentified heritage assets, particularly sites of historic and archaeological interest, will be discovered in the future.
2. Local planning authorities should make information about the historic environment, gathered as part of plan-making or development management activities, publicly accessible.

National decision-making policies

HE4: Securing the conservation and enhancement of heritage assets

1. Heritage assets, as an irreplaceable resource, should be conserved and enhanced in a manner appropriate to their significance. To achieve this, development proposals which would affect the significance of heritage assets, including any contribution made by their setting should:
 - a. Maintain or secure a use consistent with their conservation, taking into account the importance of maintaining the assets, the positive contribution they can make to sustainable communities including local economies, and the positive contribution they can make to local character and distinctiveness;
 - b. Avoid harm to the significance of heritage assets, and instead preserve and enhance this significance.
2. If harm to the significance of heritage assets cannot be minimised or avoided, there should be a clear and convincing justification in accordance with the policies in this chapter.
3. Where there is evidence of deliberate neglect of, or damage to, a heritage asset, the deteriorated state of the asset should not be taken into account in any decision relating to the asset.

4. Proposals for enabling development, which would otherwise conflict with other policies in this Framework but which would secure the future conservation of a heritage asset, should be considered on the basis of whether the conservation benefits outweigh the disbenefits of departing from the policies concerned.

HE5: Assessing effects on heritage assets

1. Development proposals affecting heritage assets should be accompanied by an assessment of the significance of the assets affected (including any contribution made by their setting) and of the potential effect of the proposal on their significance. The level of detail should be proportionate to the assets' importance and no more than is necessary to understand the potential effect of the proposal on their significance. The relevant historic environment record should be consulted as a minimum, and appropriate expertise employed where necessary.
2. Assessments of the potential effects of development proposals on heritage assets and their setting should identify whether proposals would be likely to:
 - a. Have a positive effect, which is where a heritage asset would be enhanced, or its significance better revealed; or
 - b. Have no effect on the significance of the asset; or
 - c. Result in harm to the significance of the heritage asset, either from work affecting the asset itself or from development within its setting. The degree of harm should be identified: substantial harm would occur where the development proposal would seriously affect a key element of the asset's significance; or
 - d. Cause the total loss of the significance of the heritage asset.
3. In making this assessment it is the effect on an asset's significance rather than the scale of the development which should be considered.
4. Decision makers should be satisfied that this assessment accurately reflects the effects on heritage assets caused by the proposals.
5. Where a development proposal involves, or has the potential to involve, heritage assets with archaeological interest, an appropriate desk-based assessment should be employed and, where necessary, a field evaluation.

HE6: Proposals affecting designated heritage assets

1. When considering the potential effect of a development proposal on a designated heritage asset, substantial weight⁷⁴ should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential effect amounts to a positive effect, harm, substantial harm, or total loss of its significance.
2. Development proposals which would have a positive effect on designated heritage assets should be approved.

⁷⁴ The use of "substantial weight" here is to be applied in line with statutory tests so as to discharge the duties which require considerable importance and weight to be given to harm to the relevant designated assets.

3. Where a development proposal would harm the significance of a designated heritage asset the effect on the asset and its significance should be weighed against any public benefits resulting from the proposal. Important public benefits can include securing the long-term re-use of a vacant or underused listed building, and enabling energy efficiency and low carbon heating measures to be employed.
4. Where a development proposal would cause substantial harm to, or the total loss of, the significance of a designated heritage asset, consent should be refused unless it can be demonstrated that the development is necessary to achieve substantial public benefits that outweigh the harm or loss, or if all of the following apply:
 - a. The nature of the heritage asset would otherwise prevent all reasonable uses of the site; and
 - b. No suitable use for the heritage asset itself can be found in the medium term through appropriate marketing that will enable its conservation; and
 - c. Conservation by grant-funding or some form of not for profit, charitable or public ownership is not possible; and
 - d. The harm or loss is outweighed by the benefit of bringing the asset back into use.
5. Within this context, development which would cause substantial harm to, or the total loss of, the significance of grade II listed buildings, or grade II registered parks or gardens, should be exceptional; while development which would cause substantial harm to, or the total loss of, assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II* listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional⁷⁵.

HE7: Decisions on non-designated heritage assets

1. Development proposals which would have a positive effect on non-designated heritage assets should be approved.
2. Where a development proposal would cause harm to, or the total loss of, the significance of a non-designated heritage asset, it should only be supported where the harm or loss is outweighed by the benefits of the proposal, having regard to the scale of the harm or loss and the significance of the non-designated heritage asset.

HE8: World Heritage Sites

1. To secure the long-term future of World Heritage Sites⁷⁶ and support the preservation and enhancement of their significance and Outstanding Universal Value, development

⁷⁵ Monuments that the Secretary of State for Culture, Media and Sport has identified as being of national importance but has decided not to designate as a Scheduled Monument (or as a different type of designated heritage asset) should be considered subject to the policies for designated heritage assets. Monuments that have yet to be assessed by the Secretary of State for Culture, Media and Sport through the scheduling process, but which a decision maker considers to potentially be of national importance, should be considered subject to the policies for designated heritage assets.

⁷⁶ Any development affecting World Heritage Sites should be assessed against this policy. It should be noted that some World Heritage Sites are inscribed by UNESCO to be of natural significance rather than cultural significance; and in some cases they are inscribed for both their natural and cultural significance.

proposals that affect a World Heritage Site should:

- a. Be designed in a way which pays particular regard to the significance and attributes of the Outstanding Universal Value of the World Heritage Site (including any contribution made by its setting and any buffer zone);
 - b. Take into consideration any relevant implications of the World Heritage Site management plan; and
 - c. Be supported by an assessment of the impact, including any potential cumulative impact, on the significance and Outstanding Universal Value of the World Heritage Site. This should include appropriate information such as visual impact assessments and natural environment, archaeological or historical data.
2. Not all elements of a World Heritage Site will necessarily contribute to its significance or Outstanding Universal Value. Where a development proposal would result in the loss of a building or other element which contributes to the significance or Outstanding Universal Value of a World Heritage Site, the assessment of impact should take into account the relative significance and Outstanding Universal Value of the element affected and its contribution to the significance of the World Heritage Site as a whole, and the effects of this considered in accordance with policies HE5 and HE6.
 3. Proposals that preserve those elements of the setting of a World Heritage Site that make a positive contribution to it (or which better reveal its significance) should be approved.

HE9: Conservation areas

1. Development proposals within or affecting the significance of conservation areas should:
 - a. Retain and restore buildings and other features which make a positive contribution to the character or appearance of a conservation area wherever possible; and
 - b. Consider the area's special architectural or historic interest (as identified as part of the designation of the conservation area) in the design of development.
2. Not all elements of a conservation area will necessarily contribute to its significance. Where a development proposal would result in the loss of a building or other element which contributes to the character or appearance of a conservation area that is desirable to preserve or enhance, the assessment of impact should take into account the relative significance of the element affected and its contribution to the significance of the conservation area as a whole, and the effects of this considered in accordance with policies HE5 and HE6.
3. Proposals that preserve those elements of a conservation area that make a positive contribution to it (or which better reveal its significance) should be approved.

HE10: Archaeological assets

1. Where a development proposal has the reasonable potential, based on evidence, to affect an archaeological heritage asset, discovered or undiscovered, an appropriate investigation of the asset's significance and the potential effect on this should be undertaken to identify the design of the development proposal, mitigation and

implementation of the development.

2. Archaeological assets should be preserved in situ wherever feasible. Where the archaeological asset cannot be preserved or managed on-site, appropriate provision should be made for the investigation, understanding, recording, dissemination and archiving of that asset, and should be undertaken by suitably-qualified individuals or organisations.

HE11: Loss or removal of heritage assets

1. Where a development proposal would result in the loss of the whole or part of a heritage asset (whether designated or not):
 - a. The development should not be approved without all reasonable steps being taken to make sure that the new development will proceed after the loss has occurred, including through the use of planning conditions and planning obligations to secure the development against the loss of the asset;
 - b. The applicant should record and advance understanding of the significance of the asset to be lost in a manner proportionate to its importance and the potential impact upon it; and should make this evidence (and any archive generated) publicly accessible by being deposited in the relevant Historic Environment Record, and any archives with a local museum or other public depository. The ability to record evidence of our past should not be a decisive factor in deciding whether such loss should be approved.
2. Development proposals to remove or alter a historic statue, plaque, memorial or monument (whether listed or not), should retain the feature in situ wherever possible (and, where appropriate, be supported by an explanation of their historic and social context).

Annex A: Implementation

For the purposes of decision-making

1. The policies in this Framework are material considerations which must be taken into account in decision-making from the day of its publication.
2. Development plan policies which are in any way inconsistent with the national decision-making policies in this Framework should be given very limited weight, except where they have been examined and adopted against this Framework. Other development plan policies⁷⁷ should not be given reduced weight simply because they were adopted prior to the publication of this Framework.
3. Where a local planning authority can demonstrate a five year supply of deliverable housing sites (with the appropriate buffer) and where the Housing Delivery Test indicates that the delivery of housing is more than 75% of the housing requirement over the previous three years, for the purposes of policy S5(1)(j), if the most up to date local housing need figure (calculated using the standard method set out in Annex D) is greater than the housing requirement set out in adopted development plan policies, this should not be considered as evidence of unmet need, for a period of five years from the date of the plan's adoption.

For the purposes of plan-making

4. Any local plans minerals and waste plans and supplementary plans being prepared under the *[title to be added of new plan-making regulations once made under Part 2 of the Planning and Compulsory Purchase Act 2004, to be amended by the Levelling-up and Regeneration Act 2023]* should be produced in accordance with this Framework.
5. Spatial development strategies should be produced in accordance with this Framework.
6. Neighbourhood plans that have been submitted to the local planning authority under Regulation 15⁷⁸, on or before, the date of publication should be prepared in accordance with the Framework published in December 2024. Any neighbourhood plans that have not been submitted must comply with this Framework. For neighbourhood plans that have already been submitted, the qualifying body may choose to withdraw the plan and update it to take account of this Framework.
7. For all plans that should be produced in accordance with this Framework this means the policies in this version of the Framework will apply from *[insert date of final publication]*.
8. Any other plans being prepared should be produced in accordance with the version of this Framework published in December 2024, unless any of the transitional arrangements in Annex 1 to that Framework apply (in which case those transitional arrangements continue to apply).

⁷⁷ Including policies in made neighbourhood plans.

⁷⁸ Neighbourhood Planning (General) Regulations 2012.

Planning freedoms

9. The government will continue to explore with individual areas the potential for planning freedoms and flexibilities, for instance where this would facilitate an increase in the amount of housing that can be delivered.

Written Ministerial Statements and other planning policy documents superseded by this Framework

10. The content of the following Written Ministerial Statements and other documents, where it relates to planning policies or decisions, has either been fully or partially incorporated with the National Planning Policy Framework or no longer represents up-to-date government policy:

- Large-scale housing site delivery (13 February 2025)
- Planning policy for traveller sites (12 December 2024)
- Solar and protecting our Food Security and Best and Most Versatile (BMV) Land (15 May 2024)
- The Next Stage in Our Long-Term Plan for Housing Update (19 December 2023)
- Planning - Local Energy Efficiency Standards Update (13 December 2023)
- Updated policy on planning for onshore wind development (5 September 2023)
- An update on Levelling Up - Onshore Wind Development in England (6 December 2022)
- Housing Update (15 December 2021)
- Affordable Homes Update (24 May 2021)
- Planning Update - Written Statement (1 October 2019)
- Planning Independent Report on Build Out Rates and Permitted (13 March 2019)
- Government's new planning rulebook to deliver more quality, well-designed homes (24 July 2018)
- Extending Buildings Upwards to Create New Homes (5 February 2018)
- Neighbourhood Plans - Written Statement (12 December 2016)
- Green Belt Protection and Intentional Unauthorised Development (17 December 2015)
- Shale gas and oil policy (16 September 2015)

- Giving local people the final say over onshore wind farms (18 June 2015)
- Community Pubs (26 January 2015)
- Sustainable Drainage Systems (18 December 2014)
- Small-Scale Developers (1 December 2014)
- Improving planning (3 September 2013)
- Local Planning and Onshore Wind (1 June 2013)
- Garden Development (9 June 2010)
- Planning - Development on Garden Land (19 January 2010)
- Draft National Policy Statements (9 November 2009)
- Eco-towns and zero-carbon homes (16 July 2009)

Annex B: Glossary

Affordable housing: Housing for sale or rent, for those whose needs are not met by the market (including housing that provides a subsidised route to home ownership and/or is for essential local workers or national military housing needs); and which complies with one or more of the following definitions⁷⁹:

- a. **Social Rent:** meets all of the following conditions: (a) the rent is set in accordance with the government's rent policy for Social Rent; (b) the landlord is a registered provider; and (c) it includes provisions to remain at an affordable price for future eligible households, or for the subsidy to be recycled for alternative affordable housing provision.
- b. **Other affordable housing for rent:** meets all of the following conditions: (a) the rent is set in accordance with the government's rent policy for Affordable Rent, or is at least 20% below local market rents (including service charges where applicable); (b) the landlord is a registered provider, except where it is included as part of a Build to Rent scheme (in which case the landlord need not be a registered provider); and (c) it includes provisions to remain at an affordable price for future eligible households, or for the subsidy to be recycled for alternative affordable housing provision. For Build to Rent schemes affordable housing for rent is expected to be the normal form of affordable housing provision (and, in this context, is known as Affordable Private Rent).
- c. **Discounted market sales housing:** is that sold at a discount of at least 20% below local market value. Eligibility is determined with regard to local incomes and local house prices. Provisions should be in place to ensure housing remains at a discount for future eligible households.
- d. **Other affordable routes to home ownership:** is housing provided for sale that provides a route to ownership for those who could not achieve home ownership through the market. It includes shared ownership, relevant equity loans, other low cost homes for sale (at a price equivalent to at least 20% below local market value) and rent to buy (which includes a period of intermediate rent). Where public grant funding is provided, there should be provisions for the homes to remain at an affordable price for future eligible households, or for any receipts to be recycled for alternative affordable housing provision, or refunded to government or the relevant authority specified in the funding agreement.
- e. **Military affordable housing:** meets all of the following conditions: (a) the rent is sub-market military rent as determined by the Ministry of Defence; and (b) it includes provisions to remain as affordable housing for future eligible households, service personnel and veteran households (including widowed partners and spouses of service personnel), or for the subsidy to be recycled for alternative affordable housing provision.

⁷⁹ This definition should be read in conjunction with relevant policy contained in the Affordable Homes Update Written Ministerial Statement published on 24 May 2021. The 25% minimum delivery requirement for First Homes and the First Homes exception sites policy no longer apply.

Air quality management areas: Areas designated by local authorities because they are not likely to achieve national air quality objectives by the relevant deadlines.

Ancient or veteran tree: A tree which, because of its age, size or condition, is of exceptional biodiversity, cultural or heritage value. All ancient trees are veteran trees. Not all veteran trees are old enough to be ancient, but are old relative to other trees of the same species. Very few trees of any species reach the ancient life-stage.

Ancient woodland: An area that has been wooded continuously since at least 1600 AD. It includes ancient semi-natural woodland (ASNW), plantations on ancient woodland sites (PAWS), ancient wood pasture and parkland (AWPP) and infilled ancient wood pasture and parkland (IAWPP).

Archaeological interest: There will be archaeological interest in a heritage asset if it holds, or potentially holds, evidence of past human activity worthy of expert investigation at some point.

Article 4 direction: A direction made under [Article 4 of the Town and Country Planning \(General Permitted Development\) \(England\) Order 2015](#) which withdraws permitted development rights granted by that Order.

Aviation airfields: Licensed or unlicensed aerodromes with hard or grass runways, often with extensive areas of open land related to aviation activity.

Best and most versatile agricultural land: Land in grades 1, 2 and 3a of the Agricultural Land Classification (ALC). ALC is graded from 1-5 and based on yield, range and versatility of use, and need for input.

Brownfield land: See Previously developed land.

Brownfield land registers: Registers of previously developed land that local planning authorities consider to be appropriate for residential development, having regard to criteria in the Town and Country Planning (Brownfield Land Registers) Regulations 2017. Local planning authorities will be able to trigger a grant of permission in principle for residential development on suitable sites in their registers where they follow the required procedures.

Build to Rent: Purpose built housing that is typically 100% rented out. It can form part of a wider multi-tenure development comprising either flats or houses, but should be on the same site and/or contiguous with the main development. Schemes will usually offer longer tenancy agreements of three years or more, and will typically be professionally managed stock in single ownership and management control.

Climate change adaptation: Adjustments made to natural or human systems in response to the actual or anticipated impacts of climate change, to mitigate harm or exploit beneficial opportunities.

Climate change mitigation: Action to reduce the impact of human activity on the climate system, primarily through reducing greenhouse gas emissions.

Coastal Change Management Area: An area identified in plans as likely to be affected by physical changes to the coast, estuaries or tidal rivers, over the next century, through erosion, coastal landslip, permanent inundation or coastal accretion.

Community-based specialist accommodation: Includes, but is not limited to, supervised, non-custodial housing for criminal justice purposes that provide structured support for individuals charged with or convicted of an offence, transitioning from custody, or serving community-based sentences.

Community facilities: Meeting places, public houses, places of worship, cultural venues, allotments and facilities for play, sport and informal recreation.

Community-led development: A development taken forward by, or with, a not-for-profit organisation, that is primarily for the purpose of meeting the needs of its members or the wider local community, rather than being a primarily commercial enterprise. The organisation should be created, managed and democratically controlled by its members, and membership of the organisation should be open to all beneficiaries and prospective beneficiaries of that organisation. It may take any one of various legal forms including a co-operative society, community benefit society and company limited by guarantee. The organisation should own, manage or steward the development in a manner consistent with its purpose, potentially through a mutually supported arrangement with a Registered Provider of Social Housing. The benefits of the development to the community should be clearly defined and consideration given to how those benefits can be protected over time, including in the event of the organisation being wound up.

Community Right to Build Order: An Order made by the local planning authority (under the Town and Country Planning Act 1990) that grants planning permission for a site-specific development proposal or classes of development.

Competent person (to prepare site investigation information): A person with a recognised relevant qualification, sufficient experience in dealing with the type(s) of pollution or land instability, and membership of a relevant professional organisation.

Connectivity: The degree to which a location provides access to jobs, services, and facilities by sustainable transport modes. The Connectivity Tool ([Connectivity Tool - GOV.UK](#)) provides a means of assessing this.

Conservation (for heritage policy): The process of maintaining and managing change to a heritage asset in a way that sustains and, where appropriate, enhances its significance.

Contamination: Where the actual or suspected presence of substances in, on or under the land may cause risks to people, property, human activities or the environment, regardless of whether or not the land meets the statutory definition of Contaminated Land in Part IIA.

Critical and growth minerals: Critical minerals are materials with the greatest economic importance and highest risk of supply disruption. This includes bismuth, borates, indium, iron, magnesite, magnesium, niobium, phosphorous, sodium compounds, tellurium, vanadium and zinc. Growth minerals are those which are of greatest importance to the Industrial Strategy's growth sectors. This includes beryllium, chromium, copper, uranium and graphite (natural and synthetic). The following minerals are identified as both critical and growth minerals in the Critical Minerals Strategy⁸⁰: aluminium, antimony, cobalt, gallium, germanium graphite (natural), hafnium, helium, manganese, nickel, Platinum Group Metals (PGMs) (which include iridium, platinum, rhodium and ruthenium), Rare Earth Elements (REEs), rhenium,

⁸⁰ [Vision 2035: Critical Minerals Strategy - GOV.UK](#)

silicon, tantalum, tin, titanium, tungsten and lithium.

Decentralised energy: Local renewable and local low carbon energy sources.

Deliverable: To be considered deliverable, sites for housing or other pitches and plots should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that homes will be delivered on the site within five years. In particular:

- a. sites which do not involve major development and have planning permission, and all sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (for example because they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans).
- b. where a site has outline planning permission for major development, has been allocated in a development plan, has a grant of permission in principle, or is identified on a brownfield register, it should only be considered deliverable where there is clear evidence that homes will be delivered on site within five years.

Design code: A set of illustrated design requirements that provide specific, detailed parameters for the physical development of a site, or area. The graphic and written components of the code should build upon a design vision, such as a masterplan or other design and development framework for a site or area.

Design guide: A document providing guidance on how development can be carried out in accordance with good design practice, often produced by a local authority.

Designated heritage asset: A World Heritage Site, Scheduled Monument, Listed Building, Protected Wreck Site, Registered Park and Garden, Registered Battlefield or Conservation Area designated under the relevant legislation. Monuments that the decision-maker has recognised as being of national importance but have not yet been designated as a Scheduled Monument (or as a different type of designated heritage asset) should be considered subject to the policies for designated heritage assets.

Designated rural areas: National Parks, National Landscapes, areas designated as rural under Section 157 of the Housing Act 1985, and other areas with a population of 3,000 or less and a population density of two persons or less per hectare.

Developable: To be considered developable, sites should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged.

Development plan: Is defined in section 38 of the Planning and Compulsory Purchase Act 2004, and includes adopted spatial development strategies, adopted local plans, adopted minerals and waste plans, adopted supplementary plans, neighbourhood plans that have been made and published and the policies maps for the area neighbourhood plans that have been approved at referendum are also part of the development plan, unless the local planning authority decides that the neighbourhood plan should not be made.

Early years: The provision of childcare (including education) for a young child, meaning a child from birth to the September after the child turns 5.

Ecosystem services: Functions of the natural environment, that directly or indirectly provide benefits for people.

Edge of centre: For main town centre uses, a location within a settlement that is well connected to and within 300 metres of a town centre boundary. For office development, this includes locations outside the town centre but within 500 metres of a public transport interchange. In determining whether a site falls within the definition of edge of centre, account should be taken of local circumstances.

Electricity network infrastructure: Infrastructure that facilitates the transmission of electricity from generation sources to end users, including transmission, distribution, and interconnection. This infrastructure is essential for the operation and expansion of the electricity network and includes components such as substations, converter stations, interconnectors, and cables.

Environmental impact assessment: A procedure to be followed for certain types of project to ensure that decisions are made in full knowledge of any likely significant effects on the environment.

Essential local workers: Public sector employees who provide frontline services in areas including health, education and community safety – such as NHS staff, teachers, police, firefighters and military personnel, social care and childcare workers.

Geodiversity: The range of rocks, minerals, fossils, soils and landforms.

Green infrastructure: A network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity. It includes parks and gardens, green spaces, green corridors such as rivers and canals, sustainable drainage systems, features for species, street trees and community orchards.

Grey belt: For the purposes of plan-making and decision-making, 'grey belt' is defined as land in the Green Belt comprising previously developed land and/or any other land that, in either case, does not strongly contribute to any of purposes (a), (b), or (d) in policy GB2.

Gypsies and travellers: Persons of nomadic habit of life whatever their race or origin, including such persons who on grounds only of their own or their family's or dependants' educational or health needs or old age have ceased to travel temporarily or permanently, and all other persons with a cultural tradition of nomadism or of living in a caravan, but excluding members of an organised group of travelling showpeople or circus people travelling together as such.

Habitats and Species of Principal Importance: List of habitats and species published by the Secretary of State under s. 41 of the Natural Environment and Rural Communities Act 2006.

Habitats site: Any site which would be included within the definition at regulation 8 of the Conservation of Habitats and Species Regulations 2017 and also including candidate Special Areas of Conservation or Special Protection Areas, listed or proposed Ramsar sites,

relevant Marine Sites, and compensatory habitats which relate to the sites listed above⁸¹.

Heritage asset: A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. It includes but is not limited to designated heritage assets and assets identified by the local planning authority (including local listing).

Heritage coast: Areas of undeveloped coastline which are managed to conserve their natural beauty and, where appropriate, to improve accessibility for visitors.

Historic environment: All aspects of the environment resulting from the interaction between people and places through time, including all surviving physical remains of past human activity, whether visible, buried or submerged, and landscaped and planted or managed flora.

Historic environment record: Information services that seek to provide access to comprehensive and dynamic resources relating to the historic environment of a defined geographic area for public benefit and use.

Housing Delivery Test: Measures net homes delivered in a local authority area against the homes required, using national statistics and local authority data. The Secretary of State will publish the Housing Delivery Test results for each local authority in England annually.

International, national and locally designated sites of importance for biodiversity: All international sites (Special Areas of Conservation, Special Protection Areas, and Ramsar sites), national sites (Sites of Special Scientific Interest) and locally designated sites including Local Wildlife Sites.

Irreplaceable habitat: Irreplaceable habitats are habitats with characteristic ecological features and processes which cannot successfully be created, or would take a very long time to establish and function normally. Irreplaceable habitats are difficult to recreate due to their rarity (being endangered or vulnerable to ecosystem collapse), environmental context, or because they have been established for a very long time (time thresholds may vary). They generally support important and/or rare species populations or assemblages. They include ancient woodland, ancient and veteran trees, blanket bog, limestone pavement, sand dunes, salt marsh and lowland fen.

Large-scale shared living accommodation: Non-self-contained accommodation which provides private rooms alongside shared communal spaces and facilities. This type of accommodation does not constitute self-contained dwellings (use class C3), HMOs, student accommodation, hotels, or other residential institutions. Tenancies should be for a minimum of 3 months.

Local Development Order: An Order made by a local planning authority (under the Town and Country Planning Act 1990) that grants planning permission for a specific development proposal or classes of development.

Local Enterprise Partnership: A body, designated by the Secretary of State for Housing, Communities and Local Government, established for the purpose of creating or improving the conditions for economic growth in an area.

⁸¹ Potential Special Protection Areas, possible Special Areas of Conservation and proposed Ramsar sites are sites on which the Government has initiated public consultation on the scientific case for designation as a Special Protection Area, candidate Special Area of Conservation or Ramsar Site.

Local housing need: The number of homes identified as being needed through the application of the standard method set out in Annex D.

Local Nature Partnership: A body, designated by the Secretary of State for Environment, Food and Rural Affairs, established for the purpose of protecting and improving the natural environment in an area and the benefits derived from it.

Local Nature Recovery Strategies: A system of spatial strategies for nature and environmental improvement required by law under s.104 of the Environment Act 2021.

Local Nature Reserves: A site managed as a nature reserve under s.21 of the National Parks and Access to the Countryside Act 1949 by principal local authorities.

Local plan: A plan for the future development of a local area, drawn up by the local planning authority in consultation with the community.

Local planning authority: The public authority whose duty it is to carry out specific planning functions for a particular area. All references to local planning authority include the district council, London borough council, county council, Broads Authority, National Park Authority, the Mayor of London and a development corporation, to the extent appropriate to their responsibilities.

Local Wildlife Sites: A term used to describe non-statutory areas identified by local authorities in the development plan for their biodiversity value. There are a number of different terms in use locally to describe these sites, including Sites of Importance for Nature Conservation (SINCs) and Sites of Nature Conservation Importance (SNICs) and County Wildlife Sites (CWS).

Main town centre uses: Retail development (including warehouse clubs and factory outlet centres); leisure, entertainment and more intensive sport and recreation uses (including cinemas, restaurants, drive-through restaurants, bars and pubs, nightclubs, casinos, health and fitness centres, indoor bowling centres and bingo halls); banks; professional services; offices; and arts, culture and tourism development (including theatres, museums, galleries and concert halls, hotels and conference facilities).

Major development⁸²: For housing, development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more. For non-residential development it means additional floorspace of 1,000m² or more, or a site of 1 hectare or more, or as otherwise provided in the Town and Country Planning (Development Management Procedure) (England) Order 2015.

Major hazard sites, installations and pipelines: Sites and infrastructure, including licensed explosive sites and nuclear installations, around which Health and Safety Executive (and Office for Nuclear Regulation) consultation distances to mitigate the consequences to public safety of major accidents may apply.

Mansard roof: A type of roof that is characterised by two slopes, the lower steep and the upper shallow. It is generally regarded as a suitable type of roof extension for buildings which are part of a terrace of at least three buildings and at least two stories tall, with a parapet

⁸² Other than for the specific purposes in policy N4.

running the entire length of the front façade (reference: Create Streets, 2021, *Living Tradition*).

Masterplan: A masterplan is a flexible, placemaking tool, providing a three-dimensional spatial framework and long-term vision for the development or regeneration of area specific or site specific locations.

Mayoral Development Orders: An Order made by a mayor (under the Town and Country Planning Act 1990) that grants planning permission for a specific development proposal.

Medium development: For housing, development where 10-49 homes (inclusive) will be provided, and the site has an area of up to 2.5 hectares.

Mineral Consultation Area: A geographical area based on a Mineral Safeguarding Area, where the district or borough council should consult the Mineral Planning Authority for any proposals for non-minerals development.

Minerals and waste plans: A plan containing policies on mineral and waste development, drawn up by the minerals and waste planning authority in consultation with the community. Minerals and waste matters can be dealt with in separate plans or combined with local plans where an authority is responsible for all these matters.

Minerals of national and local importance: Critical and growth minerals (as defined in this glossary) and other minerals which are necessary to meet society's needs, including aggregates, brickclay (especially Etruria Marl and fireclay), silica sand (including high grade silica sands), coal derived fly ash in single use deposits, cement raw materials, gypsum, salt, fluorspar, oil and gas (including conventional and unconventional hydrocarbons), kaolin, ball clay, potash, polyhalite and local minerals of importance to heritage assets and local distinctiveness.

Mineral Safeguarding Area: An area designated by minerals planning authorities which covers known deposits of minerals which are desired to be kept safeguarded from unnecessary sterilisation by non-mineral development.

National Landscapes: Areas legally designated as areas of outstanding natural beauty under the National Parks and Access to the Countryside Act 1949 and Countryside and Rights of Way Act 2000.

National trails: Long distance routes for walking, cycling and horse riding.

Natural capital: Stock of natural assets which provide benefits to people in the form of tangible things which are typically marketed (such as timber, fish stocks, minerals) and less tangible services (such as air purification, recreational settings and flood prevention).

Natural Flood Management: Managing flood and coastal erosion risk by protecting, restoring and emulating the natural 'regulating' function of catchments, rivers, floodplains and coasts.

Nature based solutions: Actions which use natural processes to protect, sustainably manage, and restore natural and modified ecosystems that address societal challenges, benefiting both people and nature, such as the creation of woodlands or wetlands.

Neighbourhood Development Order: An Order made by a local planning authority (under the Town and Country Planning Act 1990) through which parish councils and neighbourhood forums can grant planning permission for a specific development proposal or classes of development.

Neighbourhood plan: A plan prepared by a parish council or neighbourhood forum for a designated neighbourhood area. In law this is described as a neighbourhood development plan in the Planning and Compulsory Purchase Act 2004.

Net developable area: For the purposes of policy L3, net developable area is the part of a site that can be developed for housing and directly associated uses, including access roads within the site, private garden space, car parking areas, incidental open space and children's play areas, where these are provided.

Older people: People over or approaching retirement age, including the active, newly-retired through to the very frail elderly; and whose housing needs can encompass accessible, adaptable general needs housing through to the full range of retirement and specialised housing for those with support or care needs.

Open space: All open space of public value, including not just land, but also areas of water (such as rivers, canals, lakes and reservoirs) which offer important opportunities for sport and recreation and can act as a visual amenity.

Out of centre: A location which is not in or on the edge of a centre but not necessarily outside the settlement.

Out of town: A location out of centre that is outside the existing settlement.

Outstanding universal value: Cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations. An individual Statement of Outstanding Universal Value is agreed and adopted by the UNESCO World Heritage Committee for each World Heritage Site.

Disabled people: People have a disability if they have a physical or mental impairment, and that impairment has a substantial and long-term adverse effect on their ability to carry out normal day-to-day activities. These persons include, but are not limited to, people with ambulatory difficulties, blindness, learning difficulties, autism and mental health needs.

Permission in principle: A form of planning consent which establishes that a site is suitable for a specified amount of housing-led development in principle. Following a grant of permission in principle, the site must receive a grant of technical details consent before development can proceed.

Pitches and Plots: For the purposes of this planning policy, "pitch" means a pitch on a "gypsy and traveller" site and "plot" means a pitch on a "travelling showpeople" site (often called a "yard"). This terminology differentiates between residential pitches for "gypsies and travellers" and mixed-use plots for "travelling showpeople", which may / will need to incorporate space or to be split to allow for the storage of equipment.

Planning condition: A condition imposed on a grant of planning permission (in accordance with the Town and Country Planning Act 1990) or a condition included in a Local Development Order or Neighbourhood Development Order.

Planning obligation: A legal agreement entered into under section 106 of the Town and Country Planning Act 1990 to mitigate the impacts of a development proposal.

Playing field: The whole of a site which encompasses at least one playing pitch as defined in the Town and Country Planning (Development Management Procedure) (England) Order 2015.

Policies Map: A map prepared and maintained by a local planning authority, illustrating policies across all parts of the development plan.

Post-16: Young people who are over compulsory school age but under 19, or aged 19 or over and for whom an Education, Health and Care (EHC) plan is maintained.

Previously developed land: Land which has been lawfully developed and is or was occupied by a permanent structure and any fixed surface infrastructure associated with it, including the curtilage of the developed land (although it should not be assumed that the whole of the curtilage should be developed). It also includes land comprising large areas of fixed surface infrastructure such as large areas of hardstanding which have been lawfully developed. Previously developed land excludes: land that is or was last occupied by agricultural or forestry buildings; land that has been developed for minerals extraction or waste disposal by landfill, where provision for restoration has been made through development management procedures; land in built-up areas such as residential gardens, parks, recreation grounds and allotments; and land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape.

Primary shopping area: Defined area where retail development is concentrated.

Protected landscapes: Refers to National Parks, the Norfolk and Suffolk Broads and National Landscapes in England.

Public service infrastructure: Education and healthcare facilities of all types, and facilities for blue light, social care, library and criminal justice uses.

Ramsar sites: Wetlands of international importance, designated under the 1971 Ramsar Convention.

Reasonable future scenarios: A range of realistic transport scenarios tested in agreement with the local planning authority and other relevant bodies (including statutory consultees where appropriate), to assess potential impacts and determine the optimum transport infrastructure required to mitigate any adverse impacts, promote sustainable modes of travel and realise the vision for the site.

Recycled aggregates: Aggregates resulting from the processing of inorganic materials previously used in construction, e.g. construction and demolition waste.

Renewable and low carbon energy: Includes energy for heating and cooling as well as generating electricity. Renewable energy covers those energy flows that occur naturally and repeatedly in the environment – including from the wind, the fall of water, the movement of the oceans, from the sun and also from biomass and deep geothermal heat. Low carbon technologies are those that can help reduce emissions (compared to conventional use of fossil fuels). This includes, but is not limited to, nuclear power and supporting infrastructure,

as well as low carbon fuels such as biomethane, hydrogen and heat from recoverable sources, such as heat recovered from data centres, as well as the storage of renewable and low carbon energy, such as Battery Energy Storage Systems (BESS).

Rural exception sites: Small sites used for affordable housing and affordable traveller sites in perpetuity where sites would not normally be used for housing. Rural exception sites seek to address the needs of the local community by accommodating households who are either current residents or have an existing family or employment connection. A proportion of market homes may be allowed on the site at the local planning authority's discretion, for example where essential to enable the delivery of affordable units without grant funding.

Safeguarding zone: An area defined in Circular 01/03: *Safeguarding aerodromes, technical sites and military explosives storage areas*, to which specific safeguarding provisions apply.

Secondary aggregates: Aggregates from industrial wastes such as glass (cullet), incinerator bottom ash, coal derived fly ash, railway ballast, fine ceramic waste (pitcher), and scrap tyres; and industrial and minerals by-products, notably waste from china clay, coal and slate extraction and spent foundry sand. These can also include hydraulically bound materials.

Sectoral spatial plans: National or regional plans that focus on the spatial development of specific types of infrastructure.

Self-build and custom-build housing: Housing built by an individual, a group of individuals, or persons working with or for them, to be occupied by that individual. Such housing can be either market or affordable housing. A legal definition, for the purpose of applying the Self-build and Custom Housebuilding Act 2015 (as amended), is contained in section 1(A1) and (A2) of that Act.

Setting of a heritage asset: The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral.

Settlement: Includes cities, towns, villages and other predominantly built-up areas, including land which is allocated or has permission for development which will form part of the built-up area once the development is complete. This includes areas defined as a settlement in the development plan (whether using defined settlement boundaries or equivalent terms, or criteria for identifying settlement extents). Settlements do not include hamlets and scattered groups of houses located outside predominantly built-up areas, unless specifically defined as a settlement in the development plan.

Significance (for heritage policy): The value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting. For World Heritage Sites, the cultural value described within each site's Statement of Outstanding Universal Value forms part of its significance.

Significant observed adverse effect level: This is the level of noise exposure above which significant adverse effects on health and quality of life occur.

Spatial development strategy: A plan containing policies on the development and use of land on matters of strategic importance to the area prepared by strategic planning authorities

and the Mayor of London.

Special Areas of Conservation: Designated areas which have been given special protection as important conservation sites (in England, these sites are designated under the Conservation of Habitats and Species Regulations 2017).

Special Protection Areas: Areas classified for being of international importance for the breeding, feeding, wintering or the migration of rare and vulnerable species of birds (in England, these sites are classified under the Conservation of Habitats and Species Regulations 2017).

Site investigation information: Includes a risk assessment of land potentially affected by contamination, or ground stability and slope stability reports, as appropriate. All investigations of land potentially affected by contamination should be carried out in accordance with established procedures (such as BS10175 Investigation of Potentially Contaminated Sites – Code of Practice).

Site of Special Scientific Interest: Sites notified for their flora, fauna or geological, physiographical or geomorphological features (in England, these sites are notified under s. 28 of the Wildlife and Countryside Act 1981).

Strategic environmental assessment: A procedure (set out in the Environmental Assessment of Plans and Programmes Regulations 2004) which requires the formal environmental assessment of certain plans and programmes which are likely to have significant effects on the environment.

Supplementary plans: A type of plan that relevant plan making authorities can choose to prepare to set locally-specific design standards or shape and direct site-specific development. They must undergo consultation and independent examination.

Sustainable Drainage System: A sustainable drainage system controls surface water run off close to where it falls, combining a mixture of built and nature-based techniques to mimic natural drainage as closely as possible, and accounting for the predicted impacts of climate change. The type of system that would be appropriate will vary from small scale interventions such as permeable paving and soakaways that can be used in very small developments to larger integrated schemes in major developments.

Sustainable transport modes: Any efficient, safe and accessible means of transport with overall low impact on the environment, including walking and cycling, ultra low and zero emission vehicles, car sharing and public transport.

Technical sites: Any area within which is sited or is proposed to be sited equipment for the provision of air traffic services, as specified in the Town and Country Planning (Safeguarded Aerodromes, Technical Sites and Military Explosives Storage Areas) Direction 2002.

Town centre: Area defined in the local authority's policies map in the development plan including the primary shopping area and areas predominantly occupied by main town centre uses within or adjacent to the primary shopping area. References to town centres or centres apply to city centres, town centres, district centres and local centres as defined in the development plan but exclude small parades of shops of purely neighbourhood significance. Unless they are identified as centres in the development plan, existing out-of-centre developments, comprising or, including main town centre uses, do not constitute town

centres.

Transport assessment: A comprehensive and systematic process that considers and sets out transport issues relating to a proposed development, in the context of the vision for the scheme. It identifies measures required to support alternatives to the car such as walking, wheeling, cycling and public transport, and to promote accessibility and safety, together with measures that will be needed to deal with the anticipated transport impacts of the development.

Transport statement: A simplified version of a transport assessment where it is agreed the transport issues arising from development proposals are limited and a full transport assessment is not required.

Travel plan: A long-term management strategy for an organisation or site that details how agreed sustainable transport objectives are to be delivered, and which is monitored and regularly reviewed.

Travellers: Gypsies and travellers, and Travelling Showpeople.

Travelling showpeople: Members of a group organised for the purposes of holding fairs, circuses or shows (whether or not travelling together as such). This includes such persons who on the grounds of their own or their family's or dependants' more localised pattern of trading, educational or health needs or old age have ceased to travel temporarily or permanently, but excludes Gypsies and Travellers as defined above.

Vision-led approach: An approach to transport planning based on setting outcomes for a development based on ,achieving well-designed, sustainable, inclusive and popular places, and providing the transport solutions to deliver those outcomes as opposed to predicting future demand to provide capacity (often referred to as 'predict and provide').

Wheeling: The use of wheelchairs, mobility scooters, prams, pushchairs, and similar mobility aids as a means of travel.

Windfall sites: Sites not specifically identified in the development plan.

Annex C: Information requirements

Policy theme	National decision-making policy	Information requirement
General decision making	DM1: Preparing development proposals	<p>Planning statement setting out:</p> <ul style="list-style-type: none"> • How the development proposals are consistent with the relevant development plan and national decision-making policies • The outcome of any pre-application engagement and the extent to which proposal have changed; and • The proposed use of any planning obligations to make the proposals acceptable in planning terms.
Development Viability	DM5: Development Viability	In the limited circumstances in which a viability assessment to inform decision-making is justified, as set out in policy DM5, a viability assessment reflecting the recommended approach in planning practice guidance.
Town Centres	TC4: Assessing the Impact of development on town centres	Town centre impact assessment.
Telecommunications	CO2: Supporting information for telecommunications proposals	Pre-submission consultation information. Information on the outcome of pre-submission consultations (in particular with the relevant body).
Telecommunications	CO2: Supporting information for telecommunications proposals	Evidence that the applicant has sought to keep the number of radio and electronic communications masts and the sites for such installations to a minimum in accordance with policy CO1.
Telecommunications	CO2: Telecommunications information for telecommunications proposals	ICNIRP statement. Statement that self-certifies that the cumulative exposure, when operational, will not exceed International Commission guidelines on non-ionising radiation protection (ICNIRP).
Renewable and low-carbon energy generation and electricity network infrastructure	W3: Renewable and low carbon energy development and electricity network infrastructure	Proposals for decommissioning and site restoration, including details of how these measures are expected to be implemented.
Transport	TR6: Assessing transport impacts	Transport Statement or Transport Assessment (depending on the extent and significance of the transport issues involved).
Transport	TR6: Assessing transport	Travel Plan

Policy theme	National decision-making policy	Information requirement
	impacts	
Sports, Open Space and Recreation Facilities	HC7: Development affecting existing recreation facilities	Sports, Open Space, and Recreation Facilities Assessment showing open space, buildings or land being surplus to requirements.
Ground Conditions	P2: Ground Conditions	Site Investigation information, prepared by a competent person.
Flood Risk	F4: Assessing flood risk for decision-making	Site-specific flood risk assessment appropriate to the scale, nature, and location of development.
Sustainable Drainage Systems (SuDS)	F8: Sustainable drainage systems and watercourses	Statement outlining how the national SuDS standards have been achieved, as required by policy F8. Applies to development proposals which could affect drainage on or around the development site.
Heritage	HE5: Assessing effects on heritage assets	Heritage impact assessment. Assessment of the significance of the asset(s) affected (including any contribution made by their setting) and of the potential effect(s) of the proposal(s) on their significance.

Annex D: Housing calculations and supply

1. This Annex sets out how housing need should be calculated using the standard method, how land supply should be assessed, and the Housing Delivery Test applied. It also sets out how a five year supply of traveller sites should be established. It should be read alongside Chapter 4 (Achieving Sustainable Development) and Chapter 6 (Delivering A Sufficient Supply of Homes), and the Housing Delivery Test Rule Book.

The standard method

2. The standard method calculates a minimum annual local housing need figure as follows:

Step 1 - Setting the baseline – 0.8% of existing housing stock for the area

3. Set the baseline using the value of existing housing stock for the area of the local authority as set out in the data on Dwelling Stock Estimates data⁸³, published annually. The baseline is 0.8% of the existing housing stock for the area, and the most recent data published at the time of the calculation should be used.

Step 2 - An adjustment to take account of affordability

4. The housing stock baseline figure (as calculated in step 1) is then adjusted based on the affordability of the area.
5. The affordability data used is the [median workplace-based affordability ratios](#), published annually by the Office for National Statistics at a local authority level. The mean average affordability over the five most recent years for which data is available should be used.
6. No adjustment is applied where the ratio is 5 or below. For each 1% the ratio is above 5, the housing stock baseline should be increased by 0.95%. An authority with a ratio of 10 will have a 95% increase on its annual housing stock baseline.
7. Where an adjustment is to be made, the precise formula is as follows:

$$\text{Adjustment Factor} = ((\text{five year average affordability ratio} - 5) / 5) \times 0.95 + 1$$

Five year housing land supply

8. Local planning authorities should identify and update annually a supply of specific deliverable sites. This should be sufficient to provide a minimum of five years' worth of housing, assessed against their housing requirement in the development plan, or against their local housing need (calculated using the standard method) where the development plan requirement is more than five years old.

⁸³ Table 125: dwelling stock estimates by local authority district: [Live tables on dwelling stock \(including vacants\) - GOV.UK](#)

9. The supply of specific deliverable sites should include a buffer (moved forward from later in the plan period) of:
 - a. 5% to ensure choice and competition in the market for land; or
 - b. 20% where there has been significant under delivery⁸⁴ of housing over the previous three years, to improve the prospect of achieving the planned supply; or
 - c. From 1 July 2026, for the purposes of decision-making only, 20% where a local planning authority has a housing requirement adopted in the last five years examined against a version of the Framework published prior to December 2024⁸⁵, and whose annual average housing requirement⁸⁶ is 80% or less of the most up to date local housing need figure calculated using the standard method set out above.

Five year supply of traveller sites

10. Local planning authorities should identify and update annually a supply of specific deliverable traveller sites. This should be sufficient to provide a minimum of 5 years worth of pitches and plots, assessed against their pitch and plot requirement in the development plan.

The Housing Delivery Test

11. This measures net homes delivered in a local authority area against the homes required, using national statistics and local authority data. The Secretary of State will seek to publish the Housing Delivery Test results for each local authority in England annually.
12. Local planning authorities should monitor progress in building out sites which have permission. Where the Housing Delivery Test indicates that delivery has fallen below the local planning authority's housing requirement over the previous three years, the following policy consequences apply:
 - a. Where delivery falls below 95% of the requirement over the previous three years, the authority should prepare an action plan to assess the causes of under-delivery and identify actions to increase delivery in the future;
 - b. Where delivery falls below 85% of the requirement over the previous three years, a buffer of 20% should be added to the identified supply of specific deliverable sites. This is in addition to the requirement for an action plan;
 - c. Where delivery falls below 75% of the requirement over the previous three years, an evidenced unmet need for housing is deemed to exist for the purpose of applying

⁸⁴ This will be measured against the Housing Delivery Test, where this indicates that delivery was below 85% of the housing requirement.

⁸⁵ Or the housing requirement is more than five years old and the relevant development plan policies have been reviewed and found not to require updating.

⁸⁶ Defined as the total housing requirement, divided by the number of years in the plan period. For joint local plans, the percentage should be applied in aggregate across the joint local plan area.

policy S5(1)(j) in this Framework. This is in addition to the requirements for an action plan and 20% buffer.

13. The Housing Delivery Test consequences set out above will apply the day following the annual publication of the Housing Delivery Test results. At this point they supersede previously published results. Until new Housing Delivery Test results are published, the previously published result should be used.

Annex E: Green Belt assessments

1. Green Belt assessments should:
 - a. Identify the location and appropriate scale of the area or areas to be assessed, and in doing so:
 - i. consider all Green Belt within the Plan area in the first instance;
 - ii. be broadly consistent with any Strategic Green Belt assessment in an adopted Spatial Development Strategy
 - iii. ensure assessment areas are small enough to enable variations in their contribution to the Green Belt purposes to be assessed;
 - iv. facilitate identifying areas of grey belt by subdividing areas into smaller assessment units where this is necessary; and
 - v. consider where it may be appropriate to vary the size of assessment areas based on local circumstances. For example, the assessment of smaller areas may be appropriate in certain places, such as around existing settlements or public transport hubs or corridors;
 - b. Identify areas of grey belt land, as defined in the glossary, by evaluating the contribution each assessment area makes to Green Belt purposes (a), (b), and (d) set out in GB2, using the criteria below.
 - c. Identify whether the release or development of the assessment area(s) would fundamentally undermine the five Green Belt purposes (taken together) of the remaining Green Belt when considered across the area of the plan.
2. When making judgements as to whether land is grey belt, authorities should consider the contribution that assessment areas make to Green Belt purposes (a), (b), and (d). Considerations for informing these judgements are set out below:

Purpose A – to check the unrestricted sprawl of large built-up areas

3. This purpose relates to the sprawl of large built-up areas. Villages should not be considered large built-up areas.

Contribution	Illustrative features
Strong	Assessment areas that contribute strongly are likely to be free of existing development, and lack physical feature(s) in reasonable proximity that could restrict and contain development. They are also likely to include all of the following features: - be adjacent or near to a large built-up area - if developed, result in an incongruous pattern of development (such as an extended “finger” of development into the Green Belt)

Contribution	Illustrative features
Moderate	<p>Assessment areas that contribute moderately are likely to be adjacent or near to a large built-up area, but include one or more features that weaken the land's contribution to this purpose a, such as (but not limited to):</p> <ul style="list-style-type: none"> - having physical feature(s) in reasonable proximity that could restrict and contain development - be partially enclosed by existing development, such that new development would not result in an incongruous pattern of development - contain existing development, and/or - being subject to other urbanising influences
Weak or None	<p>Assessment areas that make only a weak or no contribution are likely to include those that:</p> <ul style="list-style-type: none"> - are not adjacent to or near to a large built-up area, or - are adjacent to or near to a large built-up area, but containing or being largely enclosed by significant existing development

Purpose B – to prevent neighbouring towns merging into one another

4. This purpose relates to the merging of towns⁸⁷, not villages.

Contribution	Illustrative Features
Strong	<p>Assessment areas that contribute strongly are likely to be free of existing development and include all of the following features:</p> <ul style="list-style-type: none"> - forming a substantial part of a gap between towns - the development of which would be likely to result in the loss of visual separation of towns
Moderate	<p>Assessment areas that contribute moderately are likely to be located in a gap between towns, but include one or more features that weaken their contribution to this purpose, such as (but not limited to):</p> <ul style="list-style-type: none"> - forming a small part of the gap between towns, and/or - being able to be developed without the loss of visual separation between towns. This could be (but is not limited to) due to the presence or the close proximity of structures, natural landscape elements or topography that preserve visual separation
Weak or None	<p>Assessment areas that contribute weakly are likely to include those that:</p> <ul style="list-style-type: none"> - do not form part of a gap between towns, or - form part of a gap between towns, but only a very small part of this gap, without making a contribution to visual separation

⁸⁷ For this purpose 'towns' includes cities.

Purpose D – to preserve the setting and special character of historic towns

5. This purpose relates to historic towns, not villages. Where there are no historic towns in the plan area, it may not be necessary to provide detailed assessments against this purpose.

Contribution Illustrative Features

Strong Assessment areas that contribute strongly are likely be free of existing development and to include all of the following features:
- form part of the setting of the historic town
- make a considerable contribution to the special character of a historic town. This could be (but is not limited to) as a result of being within, adjacent to, or of significant visual importance to the historic aspects of the town

Moderate Assessment areas that perform moderately are likely to form part of the setting and/or contribute to the special character of a historic town but include one or more features that weaken their contribution to this purpose, such as (but not limited to):
- being separated to some extent from historic aspects of the town by existing development or topography
- containing existing development, and/or
- not having an important visual, physical, or experiential relationship to historic aspects of the town

Weak or None Assessment areas that make no or only a weak contribution are likely to include those that:
- do not form part of the setting of a historic town, or
- have no visual, physical, or experiential connection to the historic aspects of the town

Annex F: Managing Flood Risk and Coastal Change

Table 1: Flood zones (risks from river and sea flooding)

Flood Zone	Definition
Zone 1 Low Probability	Land having a less than 0.1% annual probability of river or sea flooding. (All land outside Zones 2, 3a and 3b)
Zone 2 Medium Probability	Land having between a 1% and 0.1% annual probability of river flooding; or land having between a 0.5% and 0.1% annual probability of sea flooding. (Land shown in light blue on the Flood Map for Planning)
Zone 3a High Probability	Land having a 1% or greater annual probability of river flooding; or Land having a 0.5% or greater annual probability of sea. (Land shown in dark blue on the Flood Map for Planning)
Zone 3b The Functional Floodplain	<p>This zone comprises land where water from rivers or the sea has to flow or be stored in times of flood. The identification of functional floodplain should take account of local circumstances and not be defined solely on rigid probability parameters. Functional floodplain will normally comprise:</p> <ul style="list-style-type: none"> • land having a 3.3% or greater annual probability of flooding, with any existing flood risk management infrastructure operating effectively; or • land that is designed to flood (such as a flood attenuation scheme), even if it would only flood in more extreme events (such as 0.1% annual probability of flooding). <p>Local planning authorities should identify in their strategic flood risk assessments areas of functional floodplain and its boundaries accordingly, in agreement with the Environment Agency. (Not separately distinguished from Zone 3a on the Flood Map)</p>

Note: Flood Zones 2 and 3, shown on the Environment Agency's Flood Map for Planning, only account for river and sea flooding, and do not account for the benefits of flood defences or the possible effects of climate change. Reference should therefore also be made to the Environment Agency's other data on the Flood Map for Planning, and any current strategic flood risk assessment(s), when considering potential future flood risks to developments and land uses.

Table 2: Flood risk vulnerability classification

ESSENTIAL INFRASTRUCTURE

- Essential transport infrastructure (including mass evacuation routes) which has to cross the area at risk.
- Essential utility infrastructure which has to be located in a flood risk area for operational reasons, including infrastructure for electricity supply including generation, storage and distribution systems; and water treatment works that need to remain operational in times of flood.
- Wind turbines.
- Solar farms.
- Hydrogen production facilities.
- Carbon Capture, distribution and storage facilities.
- Data Centres.
- Electric vehicle charging stations.

HIGHLY VULNERABLE

- Police and ambulance stations; fire stations and command centres; telecommunications installations required to be operational during flooding.
- Emergency dispersal points.
- Basement dwellings.
- Caravans, mobile homes and park homes intended for permanent residential use.
- Installations requiring hazardous substances consent. (Where there is a demonstrable need to locate such installations for bulk storage of materials with port or other similar facilities, or such installations with energy infrastructure or carbon capture and storage installations, that require coastal or water-side locations, or need to be located in other high flood risk areas, in these instances the facilities should be classified as 'Essential Infrastructure').
- Installations falling under the Control of Major Accident Hazards Regulations or Installations requiring a radioactive substances regulations permit.

MORE VULNERABLE

- Hospitals.
- Residential institutions such as residential care homes, children's homes, social services homes, prisons and hostels.
- Buildings used for dwelling houses (including floating/rising designs), student halls of residence, drinking establishments, nightclubs and hotels.
- Non-residential uses for health services, nurseries and educational establishments.
- Landfill* and sites used for waste management facilities for hazardous waste.
- Sites used for holiday or short-let caravans and camping, subject to a specific warning and evacuation plan.

LESS VULNERABLE

- Police, ambulance and fire stations which are not required to be operational during flooding.
- Buildings used for shops; financial, professional and other services; restaurants, cafes and hot food takeaways; offices; general industry, storage and distribution; non-residential institutions not included in the 'more vulnerable' class; and assembly and leisure.
- Land and buildings used for agriculture and forestry.
- Waste treatment (except landfill⁸⁸ and hazardous waste facilities).
- Minerals working and processing (except for sand and gravel working).
- Water treatment works which do not need to remain operational during times of flood.
- Sewage treatment works, if adequate measures to control pollution and manage sewage during flooding events are in place.
- Car parks.
- Land-raising – unless part of or enabling a development with a higher vulnerability classification.

WATER-COMPATIBLE DEVELOPMENT

- Flood control infrastructure.
- Water transmission infrastructure and pumping stations.
- Sewage transmission infrastructure and pumping stations.
- Sand and gravel working.
- Docks, marinas and wharves.
- Navigation facilities.
- Ministry of Defence installations.
- Ship building, repairing and dismantling, dockside fish processing and refrigeration and compatible activities requiring a waterside location.
- Water-based recreation (excluding sleeping accommodation).
- Lifeguard and coastguard stations.
- Amenity open space, nature conservation and biodiversity, outdoor sports and recreation and essential facilities such as changing rooms.
- Essential ancillary sleeping or residential accommodation for staff required by uses in this category, subject to a specific warning and evacuation plan.

⁸⁸ Landfill is as defined in Schedule 10 of the Environmental Permitting (England and Wales) Regulations 2010.

Table 3: Flood risk vulnerability and flood zone ‘incompatibility’

Flood zones	Flood Risk Vulnerability Classification				
	Essential infrastructure	Highly vulnerable	More vulnerable	Less vulnerable	Water compatible
Zone 1	✓	✓	✓	✓	✓
Zone 2	✓	Exception test required	✓	✓	✓
Zone 3a †	Exception test required †	X	Exception test required	✓	✓
Zone 3b *	Exception test required *	X	X	X	✓ *

Key:

✓ Exception test is not required

X Development should be refused

Notes to table 2:

Some developments may contain different elements of vulnerability and the highest vulnerability category should be used, unless the development is considered in its component parts.

“†” In flood zone 3a essential infrastructure should be designed and constructed to remain operational and safe in times of flood.

“**” In flood zone 3b (functional floodplain) essential infrastructure that has passed the exception test, and water-compatible uses, should be designed and constructed to:

- remain operational and safe for users in times of flood;
- result in no net loss of floodplain storage;
- not impede water flows and not increase flood risk elsewhere.
